

GUANGDONG ALPHA ANIMATION & CULTURE CO., LTD.

Application for FCC ID Printing Issue

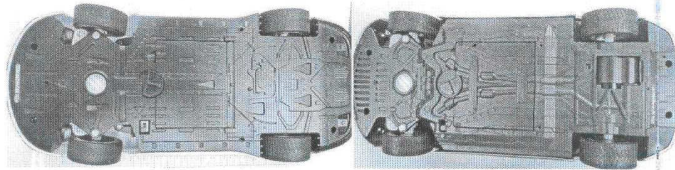

Currently we are facing a problem with the place to put the FCC statement. The situation is describe as below:

Size of product:

Item No.: 6000814: 26.5x11cm (manufacturer item No. LC258810-8)

Item No.: 6000816: 26.5x11cm (manufacturer item No. LC258020-2)

Available place and condition of the products: on the chassis of the R/C cars. However, both items are of very uneven chassis surfaces (photo as follows), and we can't find a flat place to print the FCC statement.

LC258020-2

LC258810-8

However, as you can see from the pictures, the chassis are of uneven surface, holes and gaps. After internal hot test and cold test, we can predict that the label will peel off, which is inconsistent with your FCC regulation. Bearing this risk, our client won't accept it as well for the label proposal. So the label ideas seem impractical.

Thus we are submitting our proposal as below, and hope you can check and approve it.

1. Only print the FCC ID on the chassis of the cars.
2. Showing the detail FCC statement and information on our User guide.
