TEST REPORT

Application No. : GLEMR080100055TX
Applicant: Servicell Wireless Technologies,Inc
FCC ID: VYSSW1802
Fundamental Carrier Frequency : 1850MHz ~ 1910MHz
Equipment Under Test (EUT):
Name: CDMA-FIXED WIRELESS TERMINAL
Model: SW1802
Standards: FCC part 2:2007 &FCC part 24:2007& FCC part 15:2007
Date of Receipt: 7 January 2008
Date of Test: 7 to 23 January 2008
Date of Issue: 25 January 2008

Test Result :	PASS *
----------------------	---------------

* In the configuration tested, the EUT detailed in this report complied with the standards specified above. Please refer to section 2 of this report for further details.

Authorized Signature:

2008-Jan

Stephen Guo
Manager

The manufacturer should ensure that all products in series production are in conformity with the product sample detailed in this report. If the product in this report is used in any configuration other than that detailed in the report, the manufacturer must ensure the new system complies with all relevant standards.

The report must not be used by the client to claim product certification, approval, or endorsement by NVLAP, NIST, or any agency of the federal government. All test results in this report can be traceable to National or International Standards.

This document is issued by the Company under its General Conditions of Service printed overleaf or available on request and accessible at http://www.sgs.com/terms_and_conditions.htm. Attention is drawn to the limitation of liability, indemnification and jurisdiction issues defined therein. Any holder of this document is advised that information contained hereon reflects the Company's findings at the time of its intervention only and within the limits of Client's instructions, if any. The Company's sole responsibility is to its Client and this document does not exonerate parties to a transaction from exercising all their rights and obligations under the transaction documents. Any unauthorized alteration, forgery or falsification of the content or appearance of this document is unlawful and offenders may be prosecuted to the fullest extent of the law." Unless otherwise stated the results shown in this test report refer only to the sample(s) tested. This document cannot be reproduced except in full, without prior approval of the Company.

2 Test Summary

Test	Test Requirement	Standard Paragraph	Result
RF Power Output	FCC PART 2:2007	Section 2.1046	PASS
Occupied Bandwidth	FCC PART 2 :2007	Section 2.1049	PASS
Effective Isotropic Radiated Power	FCC PART 24:2007	Section 24.232	PASS
Spurious Emissions at antenna terminals	FCC PART 2 :2007	Section 2.1051	PASS
Out of Band Emissions	FCC PART 24:2007	Section 24.238	PASS
Radiated Spurious Emissions	FCC PART 24:2007	Section 24.238	PASS
Conducted Emissions	FCC PART 15 :2007	Section 15.207	PASS
Frequency Stability	FCC PART 2 :2007 FCC PART 24:2007	Section 2.1055 Section 24.235	PASS

♣Remark:

This report was an additional one copied from the original report GLEMR080100054TXT, W1802 in this report and the item S1801EC in the original report were identical, only difference being the applicant name and address.

4 General Information

4.1 Client Information

Applicant: Servicell Wireless Technologies, Inc
Address of Applicant: 10845 SW 75th Street Miami, Florida 33173

4.2 General Description of E.U.T.

Product Name: CDMA-Fixed Wireless Terminal
Model: SW1802
Frequency: Tx:1850MHz ~ 1910MHz
Rx:1930MHz ~ 1990MHz
Type of Modulation CDMA
Duplex Mode: FDD
Duplex spacing: 80MHz
Antenna : External 50ohm, Max 3dBi
Power supply: Batteries supplied: 7.2 DC(Ni-MH 1200mAh rechargeable battery) or
AC/DC adapter
Adapter information Model no.:GM-120100;
Input :AC 100V~240V, 50-60Hz ; Output: DC 12,1A;
Adapter DC output cable: 1.5m x 2 wires unscreened cable.

4.3 Description of Support Units

The EUT has been tested independently.

4.4 Standards Applicable for Testing

The customer requested FCC tests for the EUT.
The standard used was FCC PART 2:2007 & PART 24:2007, Part 15:2007

4.5 Test Location

All tests were performed at:

SGS-CSTC Standards Technical Services Co., Ltd., Guangzhou EMC Laboratory, No.198 Kezhu Road, Science Town Economic& Technology Development District Guangzhou, China 510663

Tel: +86 20 82155555 Fax: +86 20 82075059

No tests were sub-contracted.

4.6 Other Information Requested by the Customer

None.

SGS-CSTC Standards Technical Services Ltd.

Report No.: GLEMR080100055TXT

FCC ID: VYSSW1802

4.7 Test Facility

The test facility is recognized, certified, or accredited by the following organizations:

- **NVLAP – Lab Code: 200611-0**

SGS-CSTC Standards Technical Services Co., Ltd., Guangzhou EMC Laboratory is recognized under the National Voluntary Laboratory Accreditation Program (NVLAP/NIST). NVLAP Code: 200611-0.

- **FCC – Registration No.: 282399**

SGS-CSTC Standards Technical Services Co., Ltd., EMC Laboratory has been registered and fully described in a report filed with the (FCC) Federal Communications Commission. The acceptance letter from the FCC is maintained in our files. Registration 282399, May 31, 2002. With the above and NVLAP's accreditation, SGS-CSTC is an authorized test laboratory for the DoC process.

6 Test Results

6.1 E.U.T. test conditions

Power supply:	AC adapter and Battery.
Type of antenna:	external
Operating Environment:	
Temperature:	20.0 -25.0 °C
Humidity:	38-48 % RH
Atmospheric Pressure:	992 -1006 mbar

Test frequency is the lowest channel: 25 channel(1851.25MHz) , middle channel: 600 channel(1880MHz)
and highest channel: 1175 channel(1908.75MHz)

SGS-CSTC Standards Technical Services Ltd.

Report No.: GLEMR080100055TXT

Page: 8 of 24

FCC ID: VYSSW1802

6.2 RF Power Output

Test Requirement: FCC Part 2.1046
Test Method: FCC Part 2.1046
Test Date: January 21 2008
Test Status: Test lowest, middle, highest channel.

Test Procedure:

1. Establish call communication between EUT and Tester;
2. Adjust the Test transmitter signal to make the EUT RF power output at Maximum;
3. Remove the antenna from the EUT and then connect a low RF cable from the antenna port to the spectrum;
4. Observe the power output at least 10s, consider the cable loss between the EUT and Tester, record the maximum RF power output value.

Test result:

Test Channel	Carrier Frequency (MHz)	RF Power Output (dBm)	Max Antenna Gain (dBi)	EIRP Limit (dBm)
25	1851.25	4.2	3dBi	33
600	1880.0	5.1		
1175	1908.75	5.9		

Remark:

The external antenna max gain is 3 dBi, calculate the EIRP base the formula (1) and compare it with the limit. And Radiated test result is in the other section.

Formula (1): $EIRP = P * G$; $P = \text{Power(dBm)}$, $G = \text{Gain (dBi)}$

Test Result does meet the FCC requirement.

SGS-CSTC Standards Technical Services Ltd.

Report No.: GLEMR080100055TXT

FCC ID: VYSSW1802

6.3 Occupied Bandwidth

Test Requirement: FCC Part 2.1049

Test Method: FCC Part 2.1049

Test Date: January 21 2008

Test Status: Test lowest, middle, highest channel.

Test Procedure:

1. Establish call communication between EUT and Tester;
2. Adjust the Test transmitter signal to make the EUT RF power output at Maximum
3. Remove the antenna from the EUT and then connect a low RF cable from the antenna port to the spectrum;
4. Measure the 99% Channel Power Occupied Bandwidth without considering the cable loss.

Test result:

Test Channel	Carrier Frequency(MHz)	99% Channel Power Occupied Bandwidth (MHz)
25	1851.25	1.447
600	1880.0	1.447
1175	1908.75	1.443

6.4 Spurious Emissions at antenna terminals

Test Requirement: FCC Part 2.1051
Test Method: FCC Part 2.1051
Test Date: January 21 2008
Test Status: Test lowest, middle, highest channel.

Test Procedure:

1. Establish call communication between EUT and Tester;
2. Adjust the Test transmitter signal to make the EUT RF power output at Maximum;
3. Remove the antenna from the EUT and then connect a low RF cable from the antenna port to the spectrum;
4. Scan from 30MHz to 20GHz(higher than the 10th harmonic of the carrier) in the spectrum analyzer, Peak detector used;
5. record the spurious emission frequencies and level;

Test result:

6.5 Effective Isotropic Radiated Power

Test Requirement: FCC Part 24.232
Test Method: TIA-603-C:2004
Test Date: 21 January 2008
Test Status: Test lowest, middle, highest channel.
Test Procedure:

1. Establish call communication between EUT and Tester;
2. Adjust the Test transmitter signal to make the EUT RF power output at Maximum;
3. test the EUT ERP with the external antenna connected and put in vertical polarity;

The technique used to find the output power of the transmitter was the antenna substitution method.

Substitution method was performed to determine the actual ERP emission levels of the EUT.

The following test procedure as below:

- a) The EUT was powered ON and placed on a table in the chamber. The antenna of the transmitter was extended to its maximum length.
 - b) The disturbance of the transmitter was maximized on the test receiver display by raising and lowering the receive antenna and by rotating the turntable. After the fundamental emission was maximized, a field strength measurement was made.
 - c) Steps 1 and 2 were performed with the EUT and the receive antenna in both vertical and horizontal polarization.
 - d) The transmitter was then removed and replaced with another antenna. The center of the antenna was approximately at the same location as the center of the transmitter.
 - e) A signal at the disturbance was fed to the substitution antenna by means of a non-radiating cable. With both the substitution and the receive antennas horizontally polarized, the receive antenna was raised and lowered to obtain a maximum reading at the test receiver. The level of the signal generator was adjusted until the measured field strength level in step 2 is obtained for this set of conditions.
 - f) The output power into the substitution antenna was then measured.
 - g) Steps 5 and 6 were repeated with both antennas polarized.
4. Repeat the test in vertical and horizontal polarity and report the Max EIRP value($EIRP=ERP+2.15$).

Test result:

Test Channel	Carrier Frequency(MHz)	EIRP(dBm)	Limit
25	1851.25	3.6	2W or 33dBm
600	1880.0	3.5	
1175	1908.75	3.6	

Test Result does meet the FCC requirement.

FCC ID: VYSSW1802

6.6 Out of band emissions

6.6.1 Band edges emissions

Test Requirement: FCC Part 24.238
Test Method: TIA-603-C:2004
Test Date: 21 January 2008
Test Status: Test lowest, middle, highest channel.
Test Procedure:

1. Establish call communication between EUT and Tester;
2. Adjust the Test transmitter signal to make the EUT RF power output at Maximum;
3. test the EUT ERP with the external antenna connected and put in vertical polarity;

The technique used to find the output power of the transmitter was the antenna substitution method.

Substitution method was performed to determine the actual ERP emission levels of the EUT.

The following test procedure as below:

- a) The EUT was powered ON and placed on a table in the chamber. The antenna of the transmitter was extended to its maximum length.
 - b) The disturbance of the transmitter was maximized on the test receiver display by raising and lowering the receive antenna and by rotating the turntable. After the fundamental emission was maximized, a field strength measurement was made.
 - c) Steps 1 and 2 were performed with the EUT and the receive antenna in both vertical and horizontal polarization.
 - d) The transmitter was then removed and replaced with another antenna. The center of the antenna was approximately at the same location as the center of the transmitter.
 - e) A signal at the disturbance was fed to the substitution antenna by means of a non-radiating cable. With both the substitution and the receive antennas horizontally polarized, the receive antenna was raised and lowered to obtain a maximum reading at the test receiver. The level of the signal generator was adjusted until the measured field strength level in step 2 is obtained for this set of conditions.
 - f) The output power into the substitution antenna was then measured.
 - g) Steps 5 and 6 were repeated with both antennas polarized.
4. scan the lower edge and upper edge to find the worst emissions to compare with the requirement.

SGS-CSTC Standards Technical Services Ltd.

Report No.: GLEMR080100055TXT

Page: 18 of 24

FCC ID: VYSSW1802

Test result:

Lower edge:

1. Test in Channel 25 (1851.25MHz), keep in continuously transmitting status.

Upper edge:

2. Test in Channel 1175 (1908.75MHz), keep in continuously transmitting status.

Test Result does meet the FCC requirement.

6.6.2 Radiated Spurious Emissions

Test Requirement: FCC Part 24.238
Test Method: TIA-603-C:2004
Test Date: 21 January 2008
Test Status: Test lowest channel, middle, highest channel.

Test procedure:

1. Establish call communication between EUT and Tester;
2. Adjust the Test transmitter signal to make the EUT RF power output at Maximum;
3. Add the notch-filter before the receiver antenna;
4. test the EUT ERP with the external antenna connected and put in vertical polarity;

The technique used to find the output power of the transmitter was the antenna substitution method.

Substitution method was performed to determine the actual ERP emission levels of the EUT.

The following test procedure as below:

- a) The EUT was powered ON and placed on a table in the chamber. The antenna of the transmitter was extended to its maximum length.
- b) The disturbance of the transmitter was maximized on the test receiver display by raising and lowering the receive antenna and by rotating the turntable. After the fundamental emission was maximized, a field strength measurement was made.
- c) Steps 1 and 2 were performed with the EUT and the receive antenna in both vertical and horizontal polarization.
- d) The transmitter was then removed and replaced with another antenna. The center of the antenna was approximately at the same location as the center of the transmitter.
- e) A signal at the disturbance was fed to the substitution antenna by means of a non-radiating cable. With both the substitution and the receive antennas horizontally polarized, the receive antenna was raised and lowered to obtain a maximum reading at the test receiver. The level of the signal generator was adjusted until the measured field strength level in step 2 is obtained for this set of conditions.
- f) The output power into the substitution antenna was then measured.
- g) Steps 5 and 6 were repeated with both antennas polarized.
 5. Repeat the test in vertical and horizontal polarity and report the Max value.
 6. scan from 30MHz to 20GHz, read the observed unwanted emissions and report the emission level limit less than 6dB.

6.7 Frequency Stability

Test Requirement: FCC Part 2.1055& Part 24.235
Test Method: Part 2.1055& TIA-603-C:2004
Test Date: 16 January 2008
Test Status: Test lowest channel, middle, highest channel.

Test procedure:

1. Establish call communication between EUT and Tester;
2. Make the EUT RF power output at Maximum;
3. Remove the antenna from the EUT and then connect a low RF cable from the antenna port to the spectrum;
4. -30° C to +50° C;
5. 6.1V DC to 8.3V DC; ,

Temperature(° C)	Test Results (Hz)		
	Channel 25: 1851.25MHz	Channel 600: 1880MHz	Channel 1175: 1908.75MHz
-30	200	-180	-230
-20	220	-150	-240
-10	250	-160	-220
0	290	-150	-250
+10	300	-120	-260
+20	330	-100	-290
+30	340	-100	-300
+40	350	-80	-320
+50	370	-50	-330
Limit	1851.25MHz±2.5ppm 1851.25MHz ±4628.125Hz	1880MHz ± 2.5ppm 1880MHz ± 4700Hz	1908.75MHz ± 2.5ppm 1908.75MHz ± 4771.875Hz
Voltage(V)	Test Results(Hz)		
	Channel 25: 1851.25MHz	Channel 600: 1880MHz	Channel 1175: 1908.75MHz
6.1	-300	100	220
7.2	-140	180	250
8.3	-250	230	350
Limit	1851.25MHz±2.5ppm 1851.25MHz±4628.125Hz	1880MHz ± 2.5ppm 1880MHz ± 4700Hz	1908.75MHz ± 2.5ppm 1908.75MHz ± 4771.875Hz

FCC ID: VYSSW1802

6.8 Conducted Emissions Mains Terminals, 150 kHz to 30MHz

Test Requirement: Part 15.207
Test Method: ANSI C63.4.
Test Date: 28 January 2008
Frequency Range: 150KHz to 30MHz
Detector: Peak for pre-scan (9kHz Resolution Bandwidth)
Quasi-Peak if maximised peak within 6dB of Quasi-Peak limit

EUT Operation:

An initial pre-scan was performed on the live and neutral lines with peak detector.

Quasi-Peak and Average measurement were performed at the frequencies with maximized peak emission were detected.
