

## **Transmitter Tune-up Procedure**

***Internal Product Name: Location Beacon***

***Model: 101283***

***FCC ID W77BCN***

The radio transmitter is tested during unit production by measuring the output strength of the modulated signals at 2402, 2426, and 2480 MHz. The unit is then given pass/fail status based on the measured output strength. The pass/fail threshold is determined by engineering during product development.
