Columbia, Maryland 21046

Ladies and or Gentlemen:

Please be advised that we, the manufacturer, will ensure that CEL's Zigbee Module Model ZICM357SP0-1 will be manufactured in accordance with the FCC Rules and Regulations. This includes C E L Part Numbers:

- ZICM357SP0-1 (internal trace antenna)
- ZICM357SP0-1C (configured for external antenna)

Specifically, the output power setting for the Part Number ZICM357SP0-1C on channel 26 (2480MHz) will be set in the firmware to a maximum setting of "-7" to comply with band-edge requirements. This power setting value was determined to allow both external antennas to be band-edge compliant through testing at a certified lab. This setting is contained within the binary image of the firmware and cannot be changed by the end user. During manufacturing test, the Part Number will be electronically scanned which in turn will drive the binary image that gets loaded into the module to ensure the proper power setting for channel 26.

Thank you for your attention to this matter.
