DataPass is a miniature unit that connects to the vehicle bus and captures data from the vehicle CPU/BUS. It then transmits this data to the nearest Wireless Gateway Terminal (WGT) and RS-232.

DataPass - connected directly to the vehicle bus harness and is used in heavy vehicles and trucks and supports most bus protocols common to those vehicles. DataPass unit supports the following vehicle protocols: J1708/J1587, FMS/J1939/CAN Bus, Odometer pulses, OBD II.
