

FCC ID: WAWXCOM1

Subject: FCC Part 15.247 Test Set Up Photo Explanation

The test set up shows the EUT configured in a manner representative of the intended application of the device when fitted to a motorcycle helmet but with the EUT separated outside of its nylon housing.

The removal of the EUT housing was to permit the grey external test lead to be connected to the PCB to set the device into its test mode for the required test clauses to be applied. As the PCB was active after set up it was not possible to remove the lead from the EUT.

The manufacturer has also declared the WAWXCOM1 nylon housing has no affect on the radio performance of the product.

It is considered that the test results taken are representative of the WAWXCOM1 product performance for intended purpose.

A handwritten signature in black ink, appearing to read 'J. Bellairs', with a horizontal line drawn underneath the signature.
