

### 3ab Circuit Description.txt

It is a 2.4GHz wireless controller with USB connection. It consists of two parts, the remote and the base. The remote utilises a 3D motion sensor and cap sense technology to detect the user motion and the touch button. It also communicate with the base using 2.4GHz wireless technology. The base is like a receiver. It receives information like coordinates and the button pressed and send it to computer via USB.
