## Laboratories Introduction

SIEMIC, headquartered in the heart of Silicon Valley, with superior facilities in US and Asia, is one of the leading independent testing and certification facilities providing customers with one-stop shop services for Compliance Testing and Global Certifications.

In addition to testing and certification, SIEMIC provides initial design reviews and compliance management throughout a project. Our extensive experience with China, Asia Pacific, North America, European, and International compliance requirements, assures the fastest, most cost effective way to attain regulatory compliance for the global markets.

### Accreditations for Conformity Assessment

| Country/Region | Scope                              |
|----------------|------------------------------------|
| USA            | EMC, RF/Wireless, SAR, Telecom     |
| Canada         | EMC, RF/Wireless, SAR, Telecom     |

#### 4. Equipment under Test (EUT) Information

|                               |   |
|-------------------------------|---|
| Description of EUT:           | Wireless Headset  |
| Main Model:                   | DW-779U   |
| Serial Model:                 | DW-779  |
| Date EUT received:            | Mar 02, 2015  |
| Test Date(s):                 | March 05 to April 03, 2015                                  |
| Antenna Type/Gain:            | -0.04 dBi   |
| Type of Modulation:           | GFSK  |
| RF Operating Frequency (ies): | 1921.536 MHz~1928.448 MHz (Tx/Rx)                           |
| Channel numbers:              | 5   |
| ERP/EIRP:                     | 16.471dBm   |
| Port:                         | Charging port   |
| Hardware Version:             | 15.0106.1.4.0   |
| Software Version:             | 15.0106.1.0.0   |
| AC Adapter:                   |   |
| Model:                        | WCF0900050A 1BA   |
| Input Power:                  | Input: AC100 ~ 240V, 50/60Hz,0.15A<br>Output: DC 9.0V, 0.5A |
| Trade Name :                  | N/A   |

*Note: In this report, we have chosen the main model DW-779U for testing. The difference among models was explained in the declaration letter.*

## 5. Test Summary

The product was tested in accordance with the following specifications.

All testing has been performed according to below product classification:

GFSK Modulation Product

### Test Results Summary for \*PP

| Test Standard   | Description                                    | Result     |
|---|--|------------|
| FCC part 15.203   | Antenna Requirement                            | Compliance |
| FCC part 15.315, 15.207(a)  | AC Power Line Conducted Emission               | Compliance |
| FCC part 15.323(a)  | Emission Bandwidth                             | Compliance |
| FCC part 15.319(c) (e)  | Peak transmit power                            | Compliance |
| FCC part 15.319(d)  | Power spectral density                         | Compliance |
| FCC part 15.323(d)  | In-band and Out-of-band emissions              | Compliance |
| FCC part 15.323(f)  | Carrier Frequency Stability                    | Compliance |
| FCC part 15.323(e)  | Frame repetition Stability, period and jitter  | Compliance |
| FCC part 15.319(f)  | Automatically discontinue transmission         | Compliance |
| <b>Specific requirements for devices operating in the 1920-1930MHz sub-band</b> |  |            |
| FCC part 15.323(c)(1)   | Monitoring time                                | Compliance |
| FCC part 15.323(c)(2)(5)  | Monitoring Threshold, Lease Interfered Channel | Compliance |
| FCC part 15.323(c)(7)   | Monitoring Threshold Bandwidth                 | Compliance |
| FCC part 15.323(c)(1)(5)(7)   | Reaction Time and Monitoring Interval          | Compliance |
| FCC part 15.323(c)(4)(6)  | Time and Spectrum Window Access Procedure      | Compliance |
| FCC part 15.323(c)(3)(4)  | Acknowledgements and Transmission Duration     | Compliance |
| FCC part 15.323(c)(10)  | Dual Access Criteria Check                     | N/A**      |
| FCC part 15.323(c)(11)  | Alternative Monitoring Interval                | N/A**      |
| FCC part 15.323(c)(12)  | Fair Access                                    | N/A**      |

All measurement uncertainty is taken into consideration for all presented test result.

Note: \*FP: This measurement is necessary only for Fixed Part.

|             |                    |
|-------------|--------------------|
| Test Report | 15070077-FCC-R1-FP |
| Page        | 9 of 55            |

---

\*PP: This measurement is necessary only for Portable Part.

N/A\*\*: The manufacturer declares that this device does not use any mechanisms as provided by Part15.323 (c) (10) or (c) (11) to extend the range of spectrum occupied over space or time for the purpose of denying fail access to spectrum to other device.

## 6. MEASUREMENTS, EXAMINATION AND DERIVED RESULTS

### 6.1 Antenna Requirement

#### Applicable Standard

According to FCC § 15.203, an intentional radiator shall be designed to ensure that no antenna other than that furnished by the responsible party shall be used with the device. The use of a permanently attached antenna or of an antenna that uses a unique coupling to the intentional radiator shall be considered sufficient to comply with the provisions of this Section. The manufacturer may design the unit so that a broken antenna can be replaced by the user, but the use of a standard antenna jack or electrical connector is prohibited.

#### Antenna Connector Construction

The antenna of EUT is an integral antenna which permanently attached, and the best case gain of the antenna is -0.22 dBi.

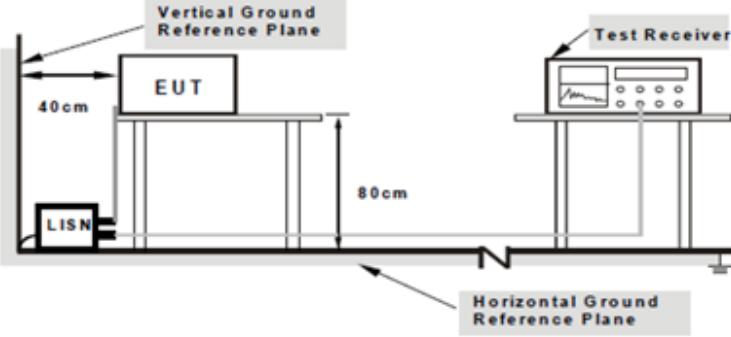

**The antenna meets up with the ANTENNA REQUIREMENT.**

**Result:** Compliance.

## 6.2 AC Power Line Conducted Emission

|                      |                  |
|----------------------|------------------|
| Temperature          | 21°C             |
| Relative Humidity    | 60%              |
| Atmospheric Pressure | 1019mbar         |
| Test date :          | March 20th, 2015 |
| Tested By :          | Dustin Wang      |

### Requirement(s):

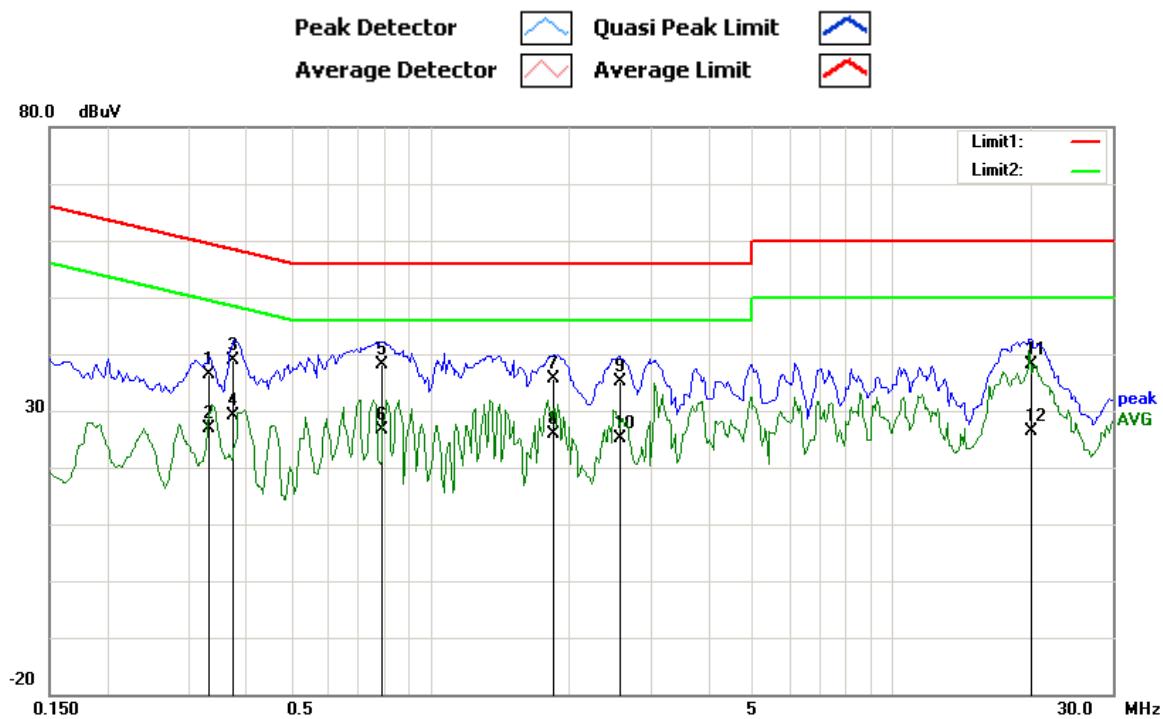

| Spec                       | Requirement  | Applicable             |                    |  |  |    |         |            |         |         |         |    |    |        |    |    |                                     |
|----------------------------|--|------------------------|--------------------|--|--|----|---------|------------|---------|---------|---------|----|----|--------|----|----|-------------------------------------|
| FCC part 15.315, 15.207(a) | <p>For Low-power radio-frequency devices that is designed to be connected to the public utility (AC) power line, the radio frequency voltage that is conducted back onto the AC power line on any frequency or frequencies, within the band 150 kHz to 30 MHz, shall not exceed the limits in the following table, as measured using a 50 [mu]H/50 ohms line impedance stabilization network (LISN). The lower limit applies at the boundary between the frequencies ranges.</p> <table border="1"> <thead> <tr> <th>Frequency ranges (MHz)</th> <th colspan="2">Limit (dB<math>\mu</math>V)</th> </tr> <tr> <th></th> <th>QP</th> <th>Average</th> </tr> </thead> <tbody> <tr> <td>0.15 ~ 0.5</td> <td>66 – 56</td> <td>56 – 46</td> </tr> <tr> <td>0.5 ~ 5</td> <td>56</td> <td>46</td> </tr> <tr> <td>5 ~ 30</td> <td>60</td> <td>50</td> </tr> </tbody> </table> | Frequency ranges (MHz) | Limit (dB $\mu$ V) |  |  | QP | Average | 0.15 ~ 0.5 | 66 – 56 | 56 – 46 | 0.5 ~ 5 | 56 | 46 | 5 ~ 30 | 60 | 50 | <input checked="" type="checkbox"/> |

| 3843.07            | 47.09                           | PK                  | H                 | 31.66                    | 3.86                  | 28.72                        | 53.89                           | 74                      | -20.11         |

## 6.7 Carrier Frequency Stability

|                      |                  |
|----------------------|------------------|
| Temperature          | 21°C             |
| Relative Humidity    | 58%              |
| Atmospheric Pressure | 1017mbar         |
| Test date :          | March 22th, 2015 |
| Tested By :          | Dustin Wang      |

### Requirement(s):

| Spec               | Requirement   | Applicable                          |
|--------------------|---|-------------------------------------|
| FCC part 15.323(f) | ±10 ppm   | <input checked="" type="checkbox"/> |
| Test Setup         |  |                                     |
| Test Procedure     | According to ANSI 63.17: 2013 clause 6.2.1  |                                     |
| Result             | <input checked="" type="checkbox"/> Pass <input type="checkbox"/> Fail              |                                     |

Test Data  Yes  N/A

Test Plot  Yes (See below)  N/A

### Test Data:

#### Frequency Stability over Power Supply Voltage at Nominal Temperature

| Voltage                  | Channel Frequency | Difference | Deviation | Limits  |
|--------------------------|-------------------|------------|-----------|---------|
| V <sub>nom</sub>         | 1924.992 MHz      | 3 kHz      | 1.38 ppm  | ±10 ppm |
| 85% of V <sub>nom</sub>  | 1924.992 MHz      | -3 kHz     | 1.6 ppm   |         |
| 115% of V <sub>nom</sub> | 1924.992 MHz      | 4 kHz      | 1.6 ppm   |         |

Note: Deviation ppm = ((Mean - Measured Frequency) / Mean) x 10<sup>6</sup>

#### Frequency Stability over Temperature

| Temp. | Channel Frequency | Difference | Deviation | Limits  |
|-------|-------------------|------------|-----------|---------|
| +20°C | 1924.992 MHz      | 3 kHz      | 1.38 ppm  | ±10 ppm |
| -20°C | 1924.992 MHz      | -2 kHz     | 1.48 ppm  |         |
| +50°C | 1924.992 MHz      | 5 kHz      | 1.53 ppm  |         |

## 6.8 Frame repetition Stability, period and jitter

|                      |                  |
|----------------------|------------------|
| Temperature          | 21°C             |
| Relative Humidity    | 58%              |
| Atmospheric Pressure | 1017mbar         |
| Test date :          | March 22th, 2015 |
| Tested By :          | Dustin Wang      |

### Requirement(s):

| Spec               | Requirement  | Applicable                          |
|--------------------|--|-------------------------------------|
| FCC part 15.323(e) | ±10 ppm for Frame Repetition Stability, 20 or 10 ms for frame period, 25 $\mu$ s for max jitter. | <input checked="" type="checkbox"/> |
| Test Setup         |               |                                     |
| Test Procedure     | According to ANSI 63.17: 2013 clause 6.2.2   |                                     |
| Result             | <input checked="" type="checkbox"/> Pass <input type="checkbox"/> Fail                           |                                     |

Test Data  Yes  N/A

Test Plot  Yes (See below)  N/A

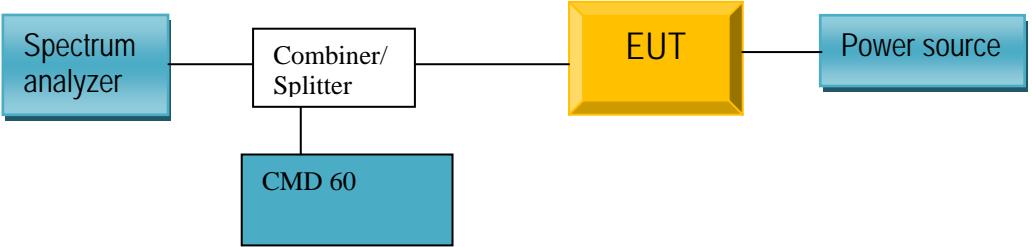

### Test Data:

| Carrier Frequency (MHz) | Frame repetition (ppm) | Frame period (ms) | Max. pos. jitter ( $\mu$ s) | Max. neg.jitter ( $\mu$ s) |
|-------------------------|------------------------|-------------------|-----------------------------|----------------------------|
| 1924.992                | 1.98                   | 10                | 0.01                        | -0.05                      |

## 6.9 Automatically discontinue transmission

|                      |                  |
|----------------------|------------------|
| VTemperature         | 21°C             |
| Relative Humidity    | 58%              |
| Atmospheric Pressure | 1017mbar         |
| Test date :          | March 22th, 2015 |
| Tested By :          | Dustin Wang      |

### Requirement(s):

| Spec                  | Requirement   | Applicable                          |
|-----------------------|---|-------------------------------------|
| FCC part<br>15.319(f) | The device shall automatically discontinue transmission in case of either absence of information to transmit or operational failure.<br><br>The provisions in this section are not intended to preclude transmission of control and signaling information or use of repetitive codes used by certain digital technologies to complete frame or burst intervals. | <input checked="" type="checkbox"/> |
| Test Setup            |   |                                     |
| Test Procedure        |   |                                     |
| Result                | <input checked="" type="checkbox"/> Pass <input type="checkbox"/> Fail  |                                     |

Test Data       Yes       N/A

Test Plot       Yes (See below)       N/A

**Measurement Data:**

The EUT is a responding device, and can transmit control and signaling information. The following tests simulate the reaction of the EUT in case of either absence of information to transmit or operational failure after a connection with the companion device is established.

| Number | Test Items                          | EUT Reaction | Verdict |
|--------|-------------------------------------|--------------|---------|
| 1      | Power removed from EUT              | A            | Pass    |
| 2      | Switch off EUT                      | N/A          | Pass    |
| 3      | Hook-on by EUT                      | N/A          | Pass    |
| 4      | Power removed from companion device | B            | Pass    |
| 5      | Switch off companion device         | B            | Pass    |
| 6      | Hook-on by companion device         | B            | Pass    |

A - Connection breakdown, cease of all transmissions

B - Connection breakdown, EUT transmits control and signaling information

C - Connection breakdown, companion device transmits control and signaling information

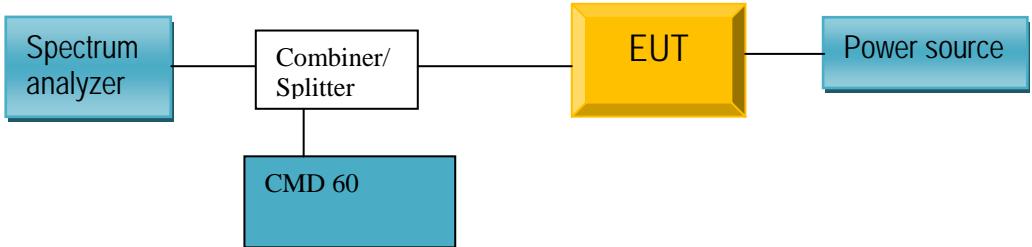

N/A - Not Applicable (EUT does not have On/ Off switch and cannot perform Hook-on)

## 6.10 Specific requirements for devices operating in the 1920-1930MHz sub-band

### 6.10.1 Monitoring time

|                      |                  |
|----------------------|------------------|
| Temperature          | 21°C             |
| Relative Humidity    | 58%              |
| Atmospheric Pressure | 1017mbar         |
| Test date :          | March 22th, 2015 |
| Tested By :          | Dustin Wang      |

#### Requirement(s):

| Spec                      | Requirement   | Applicable                          |
|---------------------------|---|-------------------------------------|
| FCC part<br>15.323(c) (1) | Immediately prior to initiating transmission, devices must monitor the combined time and spectrum windows in which they intend to transmit for a period of at least 10 milliseconds for systems designed to use a 10 milliseconds or shorter frame period or at least 20 milliseconds for systems designed to use a 20 milliseconds frame period. | <input checked="" type="checkbox"/> |
| Test Setup                |   |                                     |
| Test Procedure            | According to ANSI 63.17: 2013 clause 7.3.4  |                                     |
| Result                    | <input checked="" type="checkbox"/> Pass <input type="checkbox"/> Fail  |                                     |

Test Data     Yes       N/A  
 Test Plot     Yes (See below)       N/A

**Measurement Data:**

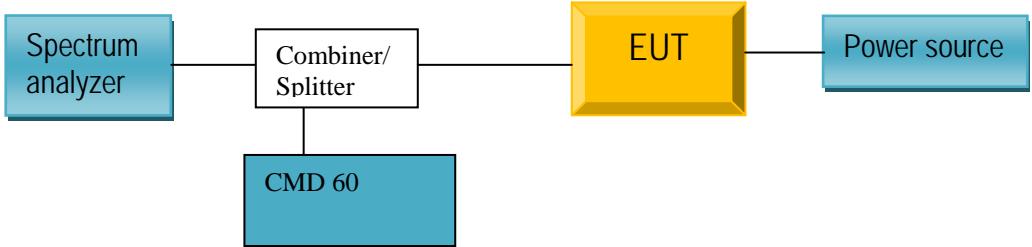

EUT monitors the combined time and spectrum window prior to initiation of transmission. The observation results as below

| Channel Selection  | Observation result     | Verdict |
|--|------------------------|---------|
| 1. Apply the interference on f1 at level TU +UM, and no interference on f2. Initiate transmission and verify the transmission on f2.   | EUT transmission on f2 | Pass    |
| 2. Apply interference on f2 at a level of TU + UM, in-band, and immediately remove all interference from f1 and immediately (but not sooner than 20 ms after the interference on f2 is applied) cause the EUT to attempt transmission. | EUT transmission on f1 | Pass    |

### 6.10.2 Monitoring Threshold, Lease Interfered Channel

|                      |                  |
|----------------------|------------------|
| Temperature          | 21°C             |
| Relative Humidity    | 58%              |
| Atmospheric Pressure | 1017mbar         |
| Test date :          | March 22th, 2015 |
| Tested By :          | Dustin Wang      |

#### Requirement(s):

| Spec                       | Requirement  | Applicable                          |
|----------------------------|--|-------------------------------------|
| FCC part 15.323(c) (2) (5) | The monitoring threshold must not be more than 30 dB above the thermal noise power for a bandwidth equivalent to the emission bandwidth used by the device.<br><br>If access to spectrum is not available as determined by the above, and a minimum of 40 duplex system access channels are defined for the system, the time and spectrum windows with the lowest power level below a monitoring threshold of 50 dB above the thermal noise power determined for the emission bandwidth may be accessed. | <input checked="" type="checkbox"/> |
| Test Setup                 |    |                                     |
| Test Procedure             | According to ANSI 63.17: 2013 clause 7.3.1, 7.3.2, 7.3.3 and 7.3.4   |                                     |
| Result                     | <input checked="" type="checkbox"/> Pass <input type="checkbox"/> Fail   |                                     |

Test Data     Yes       N/A  
 Test Plot     Yes (See below)       N/A

**Measurement Data:**

Lower threshold:  $TL = -174 + 10\log_{10}B + MU + PMAX-PEUT$  (dBm)

Upper threshold:  $TU = -174 + 10\log_{10}B + Mu + PMAX-PEUT$  (dBm)

Where: B=Emission bandwidth (Hz)

MU=dB the threshold may exceed thermal noise (30 for TL & 50 for TU)

**Calculated values**

| Threshold       | FCC part 15D | RSS-213 |
|-----------------|--------------|---------|
| Lower threshold | -81.8        | -83.1   |
| Upper threshold | N/A          | -63.1   |

The Lower Threshold is applicable for systems which have defined less than 40 duplex system access channels. The Upper Threshold is applicable for systems with more than 40 duplex system access channels and that implements the Least Interfered Channel Procedure (LIC).

Upper Threshold has been removed from FCC 15D but still exists in the current Industry Canada RSS-213.

**Limit**

| Threshold              | FCC part 15D | RSS-213 |
|------------------------|--------------|---------|
| Lower threshold + 6 dB | -75.8        | -77.1   |
| Upper threshold + 6 dB | N/A          | -57.1   |

The Upper or Lower Threshold is found by the procedure defined in ANSI C63.17: 2013 clause 7.3.1 or 7.3.2.

| Monitor Threshold | Measured level | FCC part 15D | RSS-213 |
|-------------------|----------------|--------------|---------|
| Lower threshold   | N/A            | -75.8        | -77.1   |
| Upper threshold   | -61.3          | N/A          | -57.1   |

For the EUT which support LIC there is no need to measure lower threshold because it is automatically met by LIC procedure

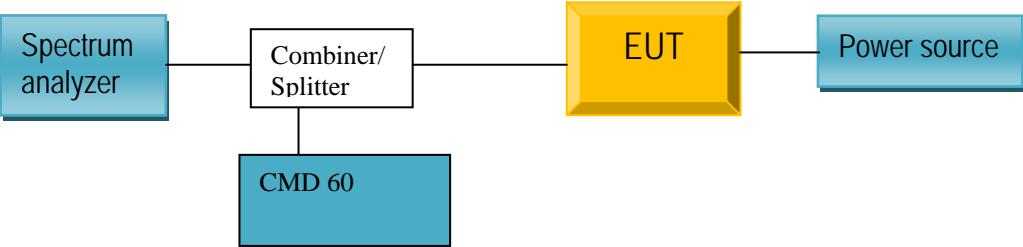

**Least Interfered Channel (LIC) Procedure Test, FCC 15.323(c)(2) and (c)(5)**

| ANSI C63.17: 2013 clause 7.3.3 ref.<br>Observation Verdict | ANSI C63.17: 2013 clause 7.3.3<br>ref. Observation Verdict | ANSI C63.17: 2013 clause<br>7.3.3 ref. Observation Verdict |
|--|--|--|
| b) f1 TL + 13 dB, f2 at TL + 6 dB                          | Transmission always on f2                                  | Pass   |
| c) f1 TL + 6 dB, f2 at TL + 13 dB                          | Transmission always on f1                                  | Pass   |
| d) f1 TL + 7 dB, f2 at TL                                  | Transmission always on f1                                  | Pass   |
| e) f1 TL, f2 at TL + 7 dB                                  | Transmission always on f1                                  | Pass   |

### 6.10.3 Monitoring Threshold Bandwidth

|                      |                  |
|----------------------|------------------|
| Temperature          | 21°C             |
| Relative Humidity    | 58%              |
| Atmospheric Pressure | 1017mbar         |
| Test date :          | March 22th, 2015 |
| Tested By :          | Dustin Wang      |

#### Requirement(s):

| Spec                   | Requirement   | Applicable                          |
|------------------------|---|-------------------------------------|
| FCC part 15.323(c) (7) | The monitoring system bandwidth must be equal to or greater than the emission bandwidth of the intended transmission. | <input checked="" type="checkbox"/> |
| Test Setup             |                                    |                                     |
| Test Procedure         | According to ANSI 63.17: 2013 clause 7. 4   |                                     |
| Result                 | <input checked="" type="checkbox"/> Pass <input type="checkbox"/> Fail  |                                     |

Test Data       Yes       N/A

Test Plot       Yes (See below)       N/A

#### Measurement Data:

The monitoring system bandwidth must be equal to or greater than the emission bandwidth of the intended transmission.

| Test performed                             | Observation result | Verdict |
|--|--------------------|---------|
| Simple Compliance test, at $\pm 30\%$ of B | No transmissions   | Pass    |
| More Detailed Test, at -6 dB points        | N/A                | N/A     |
| More Detailed Test, at -12 dB points       | N/A                | N/A     |

#### Notes:

1. The more detailed test must be pass at both the -6 and -12 dB points if the Simple Compliance test fails.
2. The Simple Compliance Test was performed with the level at  $T_U + U_M + 10$  dB to check that the EUT did not transmit at all.

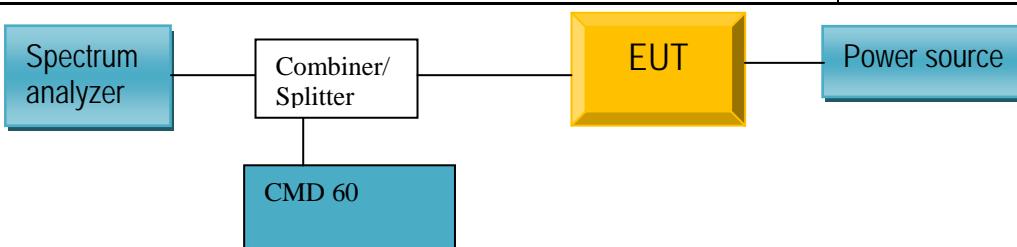

|             |                    |
|-------------|--------------------|
| Test Report | 15070077-FCC-R1-FP |
| Page        | 36 of 55           |

3. The tested EUT uses the same receiver for monitoring and communication, this test is therefore not required. However the test has been performed nonetheless and the test is passed.

#### 6.10.4 Reaction Time and Monitoring Interval

|                      |                  |
|----------------------|------------------|
| Temperature          | 21°C             |
| Relative Humidity    | 58%              |
| Atmospheric Pressure | 1017mbar         |
| Test date :          | March 22th, 2015 |
| Tested By :          | Dustin Wang      |

##### Requirement(s):

| Spec                                 | Requirement  | Applicable                          |
|--------------------------------------|--|-------------------------------------|
| FCC part<br>15.323(c) (1)<br>(5) (7) | The monitoring system bandwidth must be equal to or greater than the emission bandwidth of the intended transmission and have a maximum reaction time less than $50 \times \text{SQRT}(1.25/\text{emission bandwidth in MHz})$ microseconds for signals at the applicable threshold level but shall not be required to be less than 50 microseconds.<br><br>If a signal is detected that is 6 dB or more above the applicable threshold level, the maximum reaction time shall be $35 \times \text{SQRT}(1.25/\text{emission bandwidth in MHz})$ microseconds but shall not be required to be less than 35 microseconds. | <input checked="" type="checkbox"/> |
| Test Setup                           |    |                                     |
| Test Procedure                       | According to ANSI 63.17: 2013 clause 7.5   |                                     |
| Result                               | <input checked="" type="checkbox"/> Pass <input type="checkbox"/> Fail   |                                     |

Test Data     Yes     N/A

Test Plot     Yes (See below)     N/A

**Measurement Data:**

By administrative commands and out-of-operating region interference, the EUT is restricted to operate on a single carrier frequency.

Time-synchronized pulsed interference was then applied on the carrier at pulsed levels  $T_U + U_M$  to check that the EUT does not transmit at all. The level was raised 6 dB for part d) with 35  $\mu$  s pulses.

The pulses are synchronized with the EUT timeslots and applied centered within all timeslots.

| Pulse Width, ref. to ANSI C63.17: 2013 clause 7.5                                       | Observation result | Verdict |
|---|--------------------|---------|
| c) > largest of 50 $\mu$ s and 50*SQRT(1.25/B)  | No transmissions   | Pass    |
| d) > largest of 35 $\mu$ s and 35*SQRT(1.25/B), and with interference level raised 6 dB | No transmissions   | Pass    |

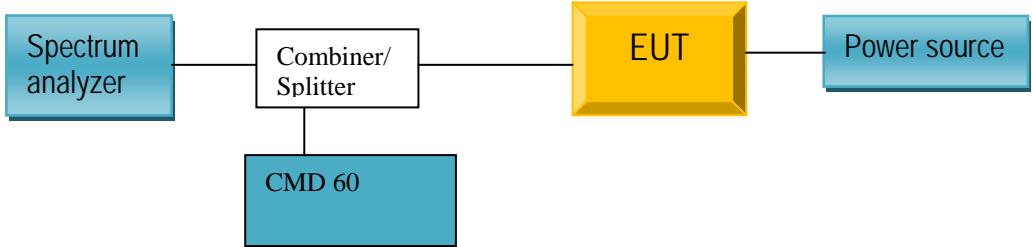

**Notes:**

Since  $B$  is larger than 1.25 MHz the test was performed with pulse lengths of 50  $\mu$  s and 35  $\mu$  s.

### 6.10.5 Time and Spectrum Window Access Procedure

|                      |                  |
|----------------------|------------------|
| Temperature          | 21°C             |
| Relative Humidity    | 58%              |
| Atmospheric Pressure | 1017mbar         |
| Test date :          | March 22th, 2015 |
| Tested By :          | Dustin Wang      |

#### Requirement(s):

| Spec                             | Requirement  | Applicable                          |
|----------------------------------|--|-------------------------------------|
| FCC part<br>15.323(c) (4)<br>(6) | <p><b>FCC 15.323(c)(4):</b> Once access to specific combined time and spectrum windows is obtained an acknowledgement from a system participant must be received by the initiating transmitter within one second or transmission must cease. Periodic acknowledgements must be received at least every 30 seconds or transmission must cease. Channels used exclusively for control and signaling information may transmit continuously for 30 seconds without receiving an acknowledgement, at which time the access criteria must be repeated.</p> <p><b>FCC 15.323(c)(6):</b> If the selected combined time and spectrum windows are unavailable, the device may either monitor and select different windows or seek to use the same windows after waiting an amount of time, randomly chosen from a uniform random distribution between 10 and 150 milliseconds, commencing when the channel becomes available</p> | <input checked="" type="checkbox"/> |
| Test Setup                       |  <pre> graph LR   SA[Spectrum analyzer] --- CS[Combiner/Splitter]   CS --- EUT[EUT]   CS --- CMD60[CMD 60]   EUT --- PS[Power source]   </pre>   |                                     |
| Test Procedure                   | According to ANSI 63.17: 2013 clause 8.1   |                                     |
| Result                           | <input checked="" type="checkbox"/> Pass <input type="checkbox"/> Fail   |                                     |

|           |  |   |
|-----------|--|---|
| Test Data | <input checked="" type="checkbox"/> Yes  | <input type="checkbox"/> N/A            |
| Test Plot | <input type="checkbox"/> Yes (See below) | <input checked="" type="checkbox"/> N/A |

**Measurement Data:**

This requirement is only for EUTs which transmit unacknowledged control and signaling information.

| Access Criteria, ref. to ANSI C63.17: 2013 clause 8.1.1  | Observation result | Verdict |
|--|--------------------|---------|
| b) Check that the EUT transmits on the interference free time-slot   | N/A                | N/A     |
| b) The EUT must terminate or pause in its repetitive transmission of the control and signaling channel on the open channel to repeat the access criteria not less frequently than every 30 s | N/A                | N/A     |

If FCC 15.323(c)(6) option, **If Random Waiting Interval is NOT implemented**

| Access Criteria, ref. to ANSI C63.17: 2013 clause 8.1.1  | Observation result | Verdict |
|--|--------------------|---------|
| b) Check that the EUT transmits on the interference free time-slot   | N/A                | N/A     |
| b) The EUT must terminate or pause in its repetitive transmission of the control and signaling channel on the open channel to repeat the access criteria not less frequently than every 30 s | N/A                | N/A     |

If FCC 15.323(c)(6) option, **Only if Random Waiting Interval is implemented**

| Access Criteria, ref. to ANSI C63.17: 2013 clause 8.1.1  | Observation result | Verdict |
|--|--------------------|---------|
| b) Check that the EUT transmits on the interference free time-slot   | N/A                | N/A     |
| b) The EUT must terminate or pause in its repetitive transmission of the control and signaling channel on the open channel to repeat the access criteria not less frequently than every 30 s | N/A                | N/A     |

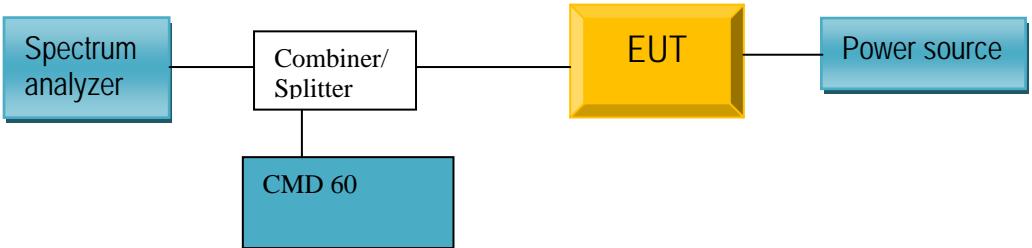

Notes:

The tested EUT does not transmit unacknowledged control and signaling information.

### 6.10.6 Acknowledgements and Transmission Duration

|                      |                  |
|----------------------|------------------|
| Temperature          | 21°C             |
| Relative Humidity    | 58%              |
| Atmospheric Pressure | 1017mbar         |
| Test date :          | March 22th, 2015 |
| Tested By :          | Dustin Wang      |

#### Requirement(s):

| Spec                             | Requirement   | Applicable                          |
|----------------------------------|---|-------------------------------------|
| FCC part<br>15.323(c) (3)<br>(4) | Occupation of the same combined time and spectrum windows by a device or group of cooperating devices continuously over a period of time longer than 8 hours is not permitted without repeating the access criteria.<br><br>Once access to specific combined time and spectrum windows is obtained an acknowledgement from a system participant must be received by the initiating transmitter within one second or transmission must cease.<br><br>Periodic acknowledgements must be received at least every 30 seconds or transmission must cease. | Result                           | <input checked="" type="checkbox"/> Pass <input type="checkbox"/> Fail  |                                     |

Test Data  Yes

N/A

Test Plot  Yes (See below)  N/A

#### Measurement Data:

During the test **Initial transmission without acknowledgements** the signal from the EUT to the companion device is blocked by circulators in addition to the tunable attenuator.

The test **Transmission time after loss of acknowledgements** is performed by cutting-off the signal from the companion device by a RF switch and measuring the time until the EUT stops transmitting.

The **Transmission Duration** test is performed by monitoring the slot in use and measuring the time until the EUT changes to a different slot.

#### Acknowledgements

| Test ref. to ANSI C63.17: 2013 clause 8.2.1         | Observation result | Verdict |
|---|--------------------|---------|
| a) Initial transmission without acknowledgements    | 0.68s              | Pass    |
| c) Transmission time after loss of acknowledgements | 10s                | Pass    |

#### Transmission Duration

| Test ref. to ANSI C63.17: 2013 clause 8.2.2                | Observation | Verdict |
|--|-------------|---------|
| b) Transmission duration on same time and frequency window | 1 hour      | Pass    |

### 6.10.7 Dual Access Criteria Check

|                      |             |
|----------------------|-------------|
| Temperature          | 21°C        |
| Relative Humidity    | 58%         |
| Atmospheric Pressure | 1017mbar    |
| Test date :          |             |
| Tested By :          | Dustin Wang |

#### Requirement(s):

| Spec                       | Requirement  | Applicable                               |
|----------------------------|--|--|
| FCC part<br>15.323(c) (10) | An initiating device may attempt to establish a duplex connection by monitoring both its intended transmits and receive time and spectrum windows. If both the intended transmit and receive time and spectrum windows meet the access criteria, then the initiating device can initiate a transmission in the intended transmit time and spectrum window. If the power detected by the responding device can be decoded as a duplex connection signal from the initiating device, then the responding device may immediately begin transmitting on the receive time and spectrum window monitored by the initiating device. | <input checked="" type="checkbox"/>      |
| Test Setup                 |  |  |
| Test Procedure             | According to ANSI 63.17: 2013 clause 8.3   |  |
| Result                     | <input type="checkbox"/> Pass  | <input checked="" type="checkbox"/> Fail |

**Test Data**  Yes  N/A

**Test Plot**  Yes (See below)  N/A

Not tested.

The manufacturer declares that this provision is not utilized by the EUT.

### 6.10.8 Alternative Monitoring Interval

|                      |             |
|----------------------|-------------|
| Temperature          | 21°C        |
| Relative Humidity    | 58%         |
| Atmospheric Pressure | 1017mbar    |
| Test date :          | ----        |
| Tested By :          | Dustin Wang |

#### Requirement(s):

| Spec                       | Requirement  | Applicable                          |
|----------------------------|--|-------------------------------------|
| FCC part<br>15.323(c) (11) | An initiating device that is prevented from monitoring during its intended transmit window due to monitoring system blocking from the transmissions of a co-located (within one meter) transmitter of the same system, may monitor the portions of the time and spectrum windows in which they intend to receive over a period of at least 10 milliseconds. The monitored time and spectrum window must total at least 50 percent of the 10 millisecond frame interval and the monitored spectrum must be within 1.25 MHz of the center frequency of channel(s) already occupied by that device or co-located co-operating devices. If the access criteria is met for the intended receive time and spectrum window under the above conditions, then transmission in the intended transmit window by the initiating device may commence. | <input checked="" type="checkbox"/> |
| Test Setup                 |  |                                     |
| Test Procedure             | According to ANSI 63.17: 2013 clause 8.4   |                                     |
| Result                     | <input type="checkbox"/> Pass <input checked="" type="checkbox"/> Fail   |                                     |

Test Data  Yes  N/A  
 Test Plot  Yes (See below)  N/A

Not tested.

The manufacturer declares that this provision is not utilized by the EUT.

### 6.10.9 Fair Access

|                      |             |
|----------------------|-------------|
| Temperature          | 21°C        |
| Relative Humidity    | 58%         |
| Atmospheric Pressure | 1017mbar    |
| Test date :          | ----        |
| Tested By :          | Dustin Wang |

#### Requirement(s):

| Spec                    | Requirement   | Applicable                          |
|-------------------------|---|-------------------------------------|
| FCC part 15.323(c) (12) | The provisions of (c)(10) or (c)(11) shall not be used to extend the range of spectrum occupied over space or time for the purpose of denying fair access to spectrum to other devices. | <input checked="" type="checkbox"/> |
| Test Setup              |   |                                     |
| Test Procedure          |   |                                     |
| Result                  | <input checked="" type="checkbox"/> Pass <input type="checkbox"/> Fail  |                                     |

Test Data  Yes  N/A

Test Plot  Yes (See below)  N/A

#### Test Result:

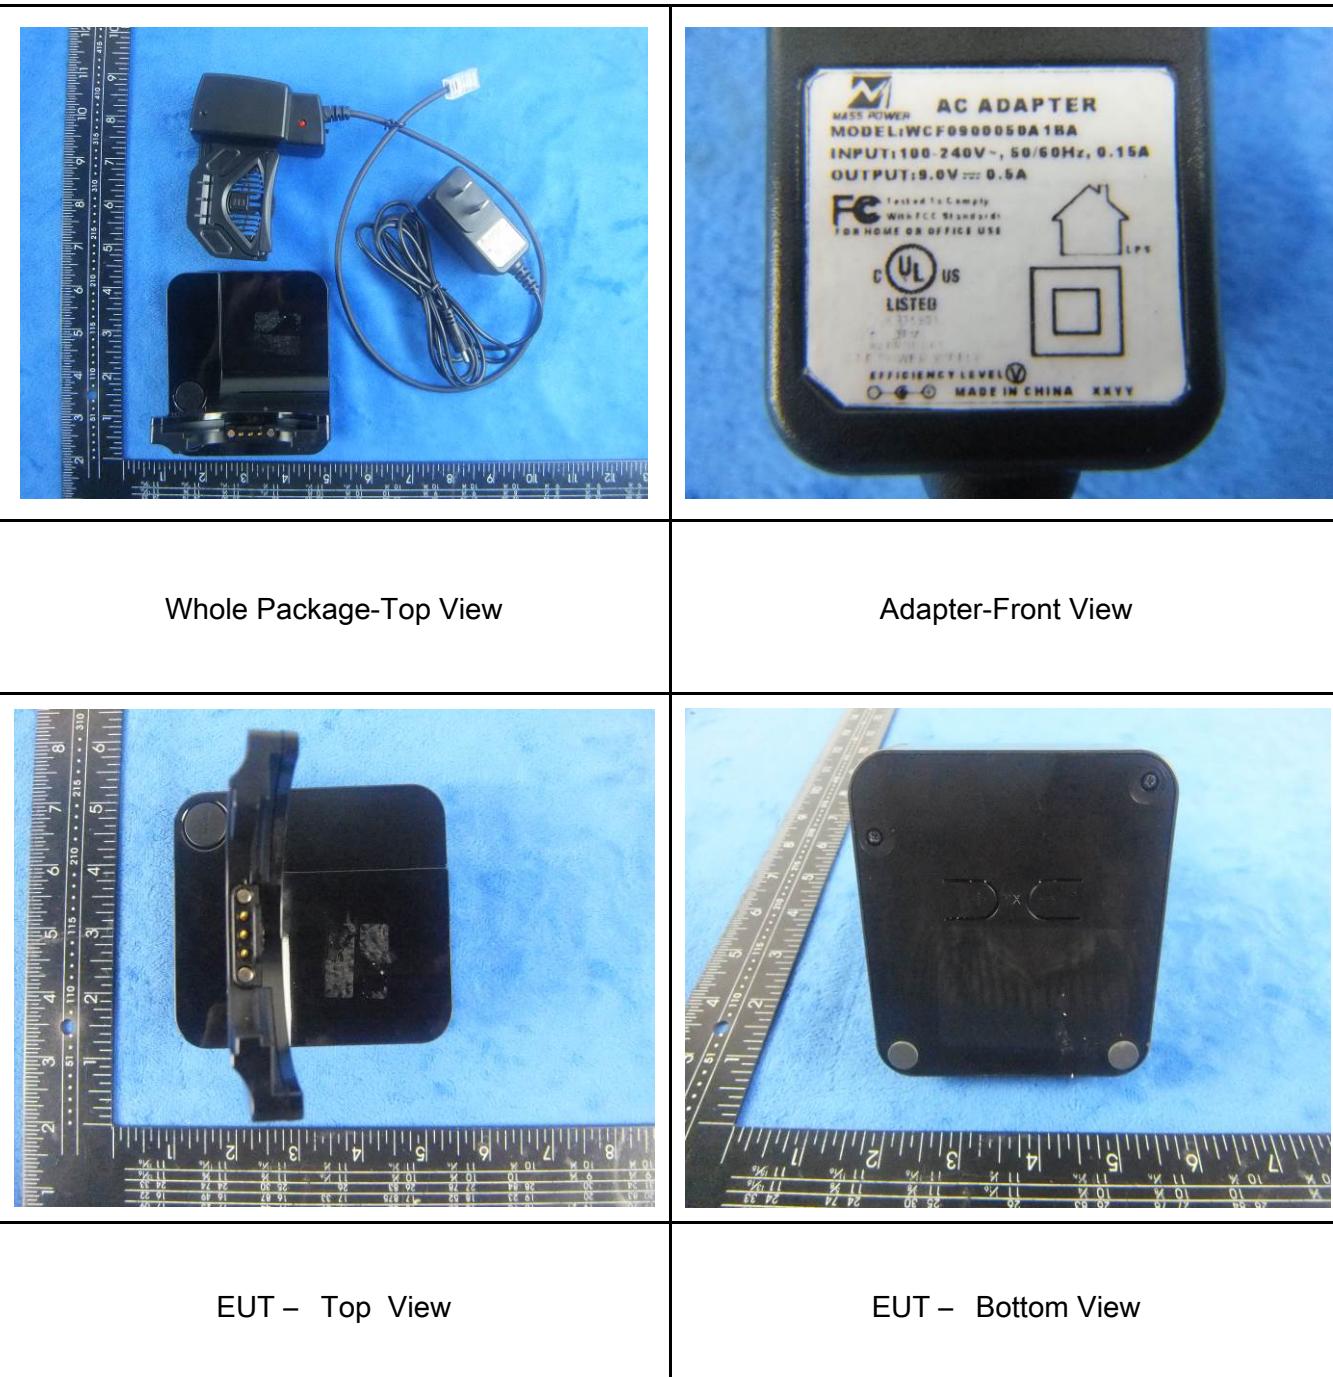

The manufacturer declares that this device does not use any mechanisms as provided by Part15.323 (c) (10) or (c) (11) to extend the range of spectrum occupied over space or time for the purpose of denying fair access to spectrum to other device.

## Annex A. TEST INSTRUMENT

| Instrument                             | Model   | Serial #   | Cal Date   | Cal Due    | In use                              |
|--|---------|------------|------------|------------|-------------------------------------|

## Annex E. Declaration of Similarity

### Declaration Letter

To whom it may concern,

For our business issue and marketing requirement, we would like to list 2 model numbers on the FCC certificates and reports, as following:

Model No.: DW-779U; DW-779

We declare that there is no electrical change has been made to the equipment that alters the compliance characteristics. The differences of these models are different logo and different model name. Please handle on the project.
