## Laboratories Introduction

SIEMIC, headquartered in the heart of Silicon Valley, with superior facilities in US and Asia, is one of the leading independent testing and certification facilities providing customers with one-stop shop services for Compliance Testing and Global Certifications.

In addition to testing and certification, SIEMIC provides initial design reviews and compliance management throughout a project. Our extensive experience with China, Asia Pacific, North America, European, and International compliance requirements, assures the fastest, most cost effective way to attain regulatory compliance for the global markets.

Note: This is the amended report application (17070973-FCC-R1-FP) of the device, the original submission (15070077-FCC-R1-FP) was granted on July 01, 2015. The difference between the original device and the current one was as following the detail information:

**The differences between the original report's EUT and the amended report's EUT are adding a BT modular, adapter.**

Based on the letter the difference between them will not affect any test items, so in this report we didn't revise any test data, and the following test data please refer to report 15070077-FCC-R1-FP.

## 5. Test Summary

The product was tested in accordance with the following specifications.

All testing has been performed according to below product classification:

GFSK Modulation Product

All measurement uncertainty is taken into consideration for all presented test result.

Note: \*FP: This measurement is necessary only for Fixed Part.

\*PP: This measurement is necessary only for Portable Part.

N/A\*\*: The manufacturer declares that this device does not use any mechanisms as provided by Part15.323 (c) (10) or (c) (11) to extend the range of spectrum occupied over space or time for the purpose of denying fail access to spectrum to other device.

## **6. MEASUREMENTS, EXAMINATION AND DERIVED RESULTS**

### **6.1 Antenna Requirement**

#### **Applicable Standard**

According to FCC § 15.203, an intentional radiator shall be designed to ensure that no antenna other than that furnished by the responsible party shall be used with the device. The use of a permanently attached antenna or of an antenna that uses a unique coupling to the intentional radiator shall be considered sufficient to comply with the provisions of this Section. The manufacturer may design the unit so that a broken antenna can be replaced by the user, but the use of a standard antenna jack or electrical connector is prohibited.

#### **Antenna Connector Construction**

The EUT has 2 antennas:

A permanently attached Monopole antenna for DECT, the gain is -0.04dBi for FP/PP.

A permanently attached Patch antenna for Bluetooth, the gain is -0.22dBi for Bluetooth.

**The antenna meets up with the ANTENNA REQUIREMENT.**

**Result:** Compliance.

5 ~ 30	60	50														

Test Setup	 <p>Note: 1.Support units were connected to second LISN. 2.Both of LISNs (AMN) are 80cm from EUT and at least 80cm from other units and other metal planes support units.</p>
Test Procedure	<ol style="list-style-type: none"> <li>The EUT and supporting equipment were set up in accordance with the requirements of the standard on top of a 1.5m x 1m x 0.8m high, non-metallic table.</li> <li>The power supply for the EUT was fed through a 50W/50mH EUT LISN, connected to filtered mains.</li> </ol>

	<p>3. The RF OUT of the EUT LISN was connected to the EMI test receiver via a low-loss coaxial cable.</p> <p>4. All other supporting equipment were powered separately from another main supply.</p> <p>5. The EUT was switched on and allowed to warm up to its normal operating condition.</p> <p>6. A scan was made on the NEUTRAL line (for AC mains) or Earth line (for DC power) over the required frequency range using an EMI test receiver.</p> <p>7. High peaks, relative to the limit line, The EMI test receiver was then tuned to the selected frequencies and the necessary measurements made with a receiver bandwidth setting of 10 kHz.</p> <p>8. Step 7 was then repeated for the LIVE line (for AC mains) or DC line (for DC power).</p>

#### Measurement Data:

The EUT is a responding device, and can transmit control and signaling information. The following tests simulate the reaction of the EUT in case of either absence of information to transmit or operational failure after a connection with the companion device is established.

Number	Test Items	EUT Reaction	Verdict
1	Power removed from EUT	A	Pass
2	Switch off EUT	N/A	Pass
3	Hook-on by EUT	N/A	Pass
4	Power removed from companion device	B	Pass
5	Switch off companion device	B	Pass
6	Hook-on by companion device	B	Pass

A - Connection breakdown, cease of all transmissions

B - Connection breakdown, EUT transmits control and signaling information

C - Connection breakdown, companion device transmits control and signaling information

N/A - Not Applicable (EUT does not have On/ Off switch and cannot perform Hook-on)

### 6.10.1 Monitoring time

Temperature	21°C
Relative Humidity	58%
Atmospheric Pressure	1017mbar
Test date :	March 22th, 2015
Tested By :	Loren Luo

#### Requirement(s):

Spec	Requirement	Applicable
FCC part 15.323(c) (1)	Immediately prior to initiating transmission, devices must monitor the combined time and spectrum windows in which they intend to transmit for a period of at least 10 milliseconds for systems designed to use a 10 milliseconds or shorter frame period or at least 20 milliseconds for systems designed to use a 20 milliseconds frame period.	<input checked="" type="checkbox"/>

EUT monitors the combined time and spectrum window prior to initiation of transmission. The observation results as below

Channel Selection	Observation result	Verdict
1. Apply the interference on f1 at level TU +UM, and no interference on f2. Initiate transmission and verify the transmission on f2.	EUT transmission on f2	Pass
2. Apply interference on f2 at a level of TU + UM, in-band, and immediately remove all interference from f1 and immediately (but not sooner than 20 ms after the interference on f2 is applied) cause the EUT to attempt transmission.	EUT transmission on f1	Pass

### 6.10.2 Monitoring Threshold, Lease Interfered Channel

Temperature	21°C
Relative Humidity	58%
Atmospheric Pressure	1017mbar
Test date :	March 22th, 2015
Tested By :	Loren Luo

#### Requirement(s):

Spec	Requirement	Applicable
FCC part 15.323(c) (2) (5)	<p>The monitoring threshold must not be more than 30 dB above the thermal noise power for a bandwidth equivalent to the emission bandwidth used by the device.</p> <p>If access to spectrum is not available as determined by the above, and a minimum of 40 duplex system access channels are defined for the system, the time and spectrum windows with the lowest power level below a monitoring threshold of 50 dB above the thermal noise power determined for the emission bandwidth may be accessed.</p>	<input checked="" type="checkbox"/>

Test Plot ☐ Yes (See below) ☒ N/A

#### Measurement Data:

Lower threshold:  $TL = -174 + 10\log_{10}B + MU + P_{MAX-PEUT}$  (dBm)

Upper threshold:  $TU = -174 + 10\log_{10}B + Mu + P_{MAX-PEUT}$  (dBm)

Where: B=Emission bandwidth (Hz)

MU=dB the threshold may exceed thermal noise (30 for TL & 50 for TU)

#### Calculated values

Threshold	FCC part 15D	RSS-213
Lower threshold	-81.8	-83.1
Upper threshold	N/A	-63.1

The Lower Threshold is applicable for systems which have defined less than 40 duplex system access channels. The Upper Threshold is applicable for systems with more than 40 duplex system access channels and that implements the Least Interfered Channel Procedure (LIC).

Upper Threshold has been removed from FCC 15D but still exists in the current Industry Canada RSS-213.

#### Limit

Threshold	FCC part 15D	RSS-213
Lower threshold + 6 dB	-75.8	-77.1
Upper threshold + 6 dB	N/A	-57.1

The Upper or Lower Threshold is found by the procedure defined in ANSI C63.17: 2013 clause 7.3.1 or 7.3.2.

Monitor Threshold	Measured level	FCC part 15D	RSS-213
Lower threshold	N/A	-75.8	-77.1
Upper threshold	-61.3	N/A	-57.1

For the EUT which support LIC there is no need to measure lower threshold because it is automatically met by LIC procedure

Simple Compliance test, at $\pm 30\%$ of B	No transmissions	Pass
More Detailed Test, at -6 dB points	N/A	N/A
More Detailed Test, at -12 dB points	N/A	N/A

#### Notes:

1. The more detailed test must be pass at both the -6 and -12 dB points if the Simple Compliance test fails.
2. The Simple Compliance Test was performed with the level at  $T_U + U_M + 10$  dB to check that the EUT did not transmit at all.

3. The tested EUT uses the same receiver for monitoring and communication, this test is therefore not required. However the test has been performed nonetheless and the test is passed.

#### Measurement Data:

By administrative commands and out-of-operating region interference, the EUT is restricted to operate on a single carrier frequency.

Time-synchronized pulsed interference was then applied on the carrier at pulsed levels  $T_U + U_M$  to check that the EUT does not transmit at all. The level was raised 6 dB for part d) with 35  $\mu$  s pulses.

The pulses are synchronized with the EUT timeslots and applied centered within all timeslots.

Pulse Width, ref. to ANSI C63.17: 2013 clause 7.5	Observation result	Verdict
c) > largest of 50 $\mu$ s and $50 \cdot \text{SQRT}(1.25/B)$	No transmissions	Pass
d) > largest of 35 $\mu$ s and $35 \cdot \text{SQRT}(1.25/B)$ , and with interference level raised 6 dB	No transmissions	Pass

#### Notes:

Since  $B$  is larger than 1.25 MHz the test was performed with pulse lengths of 50  $\mu$  s and 35  $\mu$  s.

#### Measurement Data:

During the test **Initial transmission without acknowledgements** the signal from the EUT to the companion device is blocked by circulators in addition to the tunable attenuator.

The test **Transmission time after loss of acknowledgements** is performed by cutting-off the signal from the companion device by a RF switch and measuring the time until the EUT stops transmitting.

The **Transmission Duration** test is performed by monitoring the slot in use and measuring the time until the EUT changes to a different slot.

SUBJECT: Declaration of differences in tested devices

To Whom It May Concern:

We, DASAN ELECTRON CO.,LTD, declares that there is no difference between DW-779U and DW-779UB for the DECT RF part.

The difference between DW-779U and DW-779UB is as below.

1. Only DW-779UB has a Bluetooth module  
Except listings above, the others are all the same as DW-779U.

DW-779UB, X400P-UB, FSPW2016MUB and HSW100UB are exactly same in Hardware and Software.  
DW-779U, DW-779,X400P-U,X400, FSPW2015MU, FSPW2015M and HSW100U are exactly same in Hardware and Software.

Sincerely,  
Kyung Ryong, Hong / Director
