

The UHF FM narrow band half-duplex radio data modules to enable wireless data communication with over 1500m operation range (LOS) in combination with FSK modem for US market.

Any desired frequency in 433.92MHz band be set from an external CPU. By mounting all high frequency circuits in the shielding case, the module withstands external noise and provides reliable data communication.

ARIB STD T-67, EN300 220 & Korea standard compliance

Low voltage operation from 3.6V

Ideal for battery with FSK modem

Control by SPI bus

Data sampling clock from RF module

Frequency range : 433.92MHz

RoHS compliant
