## **TT1000 operational description**

e-DATA time recording terminals are designed specifically for use in Time & Attendance applications.

All standard features such as clockin, clock-out, official absence, balance query, and special functions are covered.

The wide range of built-in card readers ensures compatibility with various RFID standards. An optional fingerprint verification reader is used for eliminating the problem of "buddy punching". It can even eliminate the need for cards, offering the ultimate convenience of a cardless system.

The built-to-order approach allows you to choose from a wide range of standard components for keypad and reader technology to deliver a tight functional fit and a lower cost alternative to meet your organization's needs. The TT1000 terminal offers a 20 x 8 Monochrome LCD display with programmable keys for user interaction which are available in a range of colors and configurations to minimize training times and maximize efficiency.
