3) Bell coverage range

Each group generates No. 1~31 Table number. Table number 0 is not assigned to the table number. Center button is No. 0, left button is No. 1, Right button is No. 2. When indicating to the pager, No. 0 is not indicated.

The quantity of a channel is 1~31, but using all 24 Group, user can select max 744 EA of table number.

4) The Frame Format of the signal

12-bit of Waveform, which notes 0, 1, and F.

A0	A1	A2	A3	A4	A5	A6	A7	A8	A9	D0	D1
----	----	----	----	----	----	----	----	----	----	----	----

A0~A4 : Table number 0~31 : (High, Low Status)

A5~A8 : Group 0~23 : (High, Low, Floating Status)

A9 : Distinction key. Stabled to Floating Status

D0~D1 : Indicate button number 1~3 : (High, Low Status)

3.2 Other tips

- 1) Zoning : Using ID Writer, we adopted allocating any table number to the any pager
- 2) At same table, when user press same button again, by max 10 sec, the input is not activated. This is “duplicate message controlling function”.

4. Installation

- 1) Polish the place that VELLUX BELL will be mounted and polish the bottom of VELLUX BELL.
- 2) Stick dual-stick tape on the bottom side of VELLUX BELL, and then mount VELLUX BELL firmly to the place that you would like to stick.

5. Maintenance

5.1 When the power is not indicated (LED is off)

→ Check the polarity of the Battery whether correctly placed.

5.2 The power is indicated (LED is on), but there is no transmission

→ Call the A/S number which is marked on the label.
