

RFID Tag Model #: GPCC User Guide

Rev. 0912.2

Safety Information

No operator serviceable parts inside. Refer servicing to qualified service personnel.

Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- —Reorient or relocate the receiving antenna. —Increase the separation between the equipment and receiver.
- —Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- —Consult the dealer or an experienced radio/TV technician for help.

GPCC Tag Overview

The GPCC RFID (Radio Frequency Identification) Tags are one component of a Real Time Location System (RTLS). Tags are affixed to assets that are to be located and tracked and transmit data via RF (Radio Frequency) to the system infrastructure. There are no operator actions taken with these devices other than to attach them to the assets which are being tracked.

Installation Instructions

GPCC Tags should be attached to an asset that will be tracked using the provided double backed tape. Position the Tag where it will not be damaged nor covered during normal use of the asset.

Peel the protective layer off the tape and carefully position the GPCC Tag in the desired location on the asset. Apply pressure to the Tag and hold against the asset for approximately 10 seconds.
