

- 1, DC 12V is from car power supply, was transformed to 5V,3V,1.5V from DC/DC circuit;
- 2, IC ATJ2063N supply control and decode function which works with a 24MHz crystal, MP3/WAV file will be play.  
HY1418 is consist of FM modulate and RF signal amply block,
- 3, As ATJ2063N be powered, LCM, NANDFLASH and FM circuit will be reset and initialized, then music will be played, the original signal will be modulate and transmit as FM signal which can be receiver by FM receiver.
