

## Description

1. Think that the high level doing a reed pipe after being triggered , exporting one by that 4011 IC series of height electrical level changes from 11 feet gives 1527 IC to supply electricity.

2. Electricity queen signal that can send out a belt yard voluntarily is launched the part circuit on 1527 IC , the foot decides among them from 1527 IC 5 to 8 as for the code what to send out coming jumper wire. Launch the part circuit that the code signal giving to over is dispatched process modulating again amplification from air wire going out. Q3 audion and the vicinity component are composed of the low electricity detecting circuit , think that battery voltage is lower than 5 V retinue , green light only is capable to do light.

3. D1 , C1 , R5 three component decision launch signals time length
