INSTALLING DRIVERS

Step 1: Download the CP210x_Universal_Windows_Driver

Step 2: Extract the downloaded file and note this folder

Step 3: Plug in your Emulator Stick to the PC

Step 4: Open the device manager by clicking on the Start menu or press the Windows key on your keyboard.

Step 5: In the search bar, type "Device Manager" (without quotes) and then click on the "Device Manager" app in the search results. This will open the Device Manager window.

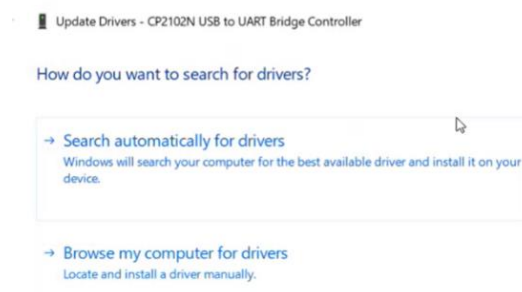

Step 6: Scroll down and look for the CP2102 device.

Step 7: Right click on the CP2102 device and choose update driver from the list

Step 8: On the next window, select Browse my computer for drivers

Step 9: Select: Search for drivers in this location and click **Browse**

Step 10: Select the folder where you have stored the downloaded files and click **Next**

Step 11: Once it finishes the installation; go back to the device manager and check which COM PORT this has been assigned to. e.g. COM 7

PANEL EMULATOR

Setup The Panel Emulator

Note: Make sure you have

1. The credentials to log in (username / password) to the cloud:
2. Installed the drivers

Step 1: On the back of the Panel Emulator USB note the serial number of the device

Step 2: Log in to the cloud emulator and click on **Add simulator**

Step 3: On the dialog box, type in the device name in the name box and click **ADD**

Step 4: On the main screen note the IP address and port

Step 5: Click Start

Step 6: Plug in the Panel Emulator USB to the computer if this is not plugged

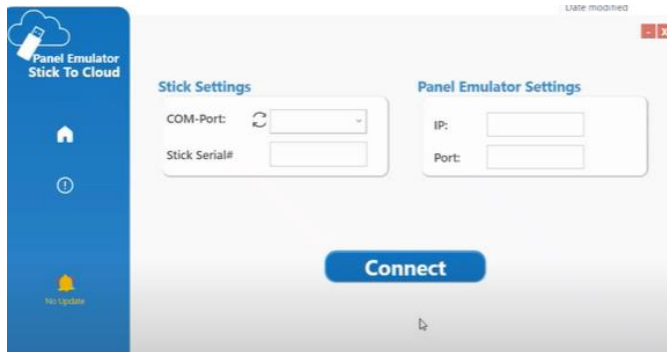

Step 7: On the device manager, check which COM PORT this emulator has been assigned to. e.g. COM 7

Step 8: Download the Panel Stick To Cloud Emulator software

Step 9: Using Administrator/Elevated Privileges, install the Panel Stick To Cloud Emulator software

Step 10: Run the Panel Stick To Cloud Emulator software and enter the following details (COM-Port / Stick Serial from the USB Stick and IP and Port from the portal) and click **Connect**

Step 11: On the cloud panel emulator you should see the connection status turn green indicating a successful connection.

Connection status: 

Add a Device

Note: Make sure you have the device information added into the API.

Step 1: On the cloud emulator; on the left, click on **Devices Info**; A new page would be loaded

Step 2: Click on **Create Device Info**

Step 3: Select the device template for your device, click **Next**

Step 4: The wizard will walk you through the device setup with confirmation at the end. (Kindly Review Your Device ID)

Note: To limit the choices to the pre-determined items you can click on **Show Selected**

☒ Show selected

Step 5: Upon completion, the device would show up in the list

<input type="checkbox"/>	NAME	DEVICE TYPE	DEVICE SUB-TYPE	LAST MODIFIED			
<input type="checkbox"/>	DL	14	E8	2024-03-14 12:45:18			

Enrolling Devices

Note: Make sure you have the added the device.

Step 1: On the cloud emulator, on the right Click on **Panel Actions**; a new window would show on the right.

Step 2: Click on **Enroll Device**

Step 3: From your device, send an enroll command; It should show up where the Enroll Now is written

Step 4: Click on **Accept** to accept the device

Using The Panel Emulator

Note: Make sure you have the device enrolled to the panel emulator

Device Information

On the top of portion of the Panel Emulator main page it would show the device information and the status

502-5863 ✕					
Device Information	Firmware Version	RF Version	Link Quality	Link Status	Notification Period (sec)
	00.00.00	02.26	STRONG	2-WAY	1

Groups

On the Panel Emulator main page, the device items are grouped into the following categories

- Configuration
- Statuses
- Actions
- OTA

Each group can be collapsed

In each group, tiles can be seen if available for the device

Configuration

Temperature Report Configuration

See Parsed

Debug Report Configuration

0

Light Report Configuration

See Parsed

Alarm LED Activation

Enabled

Tiles

Device
State - Device Name

Disable - Status

Available Activities

Commands that can be done on the Tiles if available

Edit: Set the configuration; Click on the icon to edit and send the new configuration

Revert: Recall the last configuration; Click on the icon to recall

View: View the configuration; Click on the icon to view

Send Get: Retrieve the device status; Click on the icon to perform a send-get command

Sending Configuration

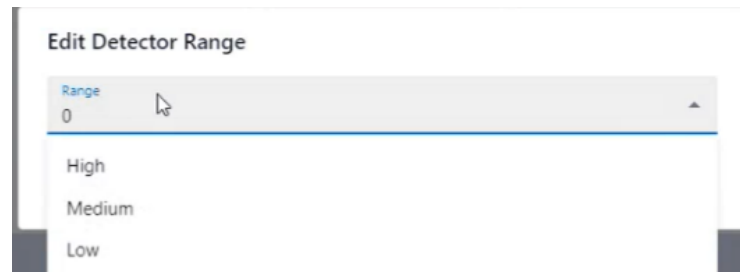

Configuration commands that can be sent to the device

Step 1: Go to the configuration group

Step 2: Click on the pencil of the configuration you want to change

Step 3: Click on the title and select the configuration option from the drop-down menu

Step 4: Click on Save

Save

Step 5: Click Upload To Device

Viewing Statuses

Device statuses that can be seen from the device

Step 1: Go to the status group

Step 2: Click on the eye icon of the status you want to view

Sending Actions

Action are commands that can be sent to the device

Step 1: Go to the action group

Step 2: Click on the drop-down list of the action type

Step 3: Click on the action you want to perform

Step 4: Fill in the additional information (*) would be mandatory

Step 5: Click send

Checking OTA (Over-The-Air) Firmware

Checking and updating OTA firmware

Step 1: Go to the OTA group and history and updates can be made

<input type="button" value="Check for updates"/>		<input type="checkbox"/> Automatic Enabling Of Reboot Permission		<input type="checkbox"/> Reboot Permission		OTA Status History Special Settings Infinite OTA	
FIRMWARE ID	NEW FIRMWARE VERSION (FROM OTA PACKAGE)	LAST RECEIVED OTA STATUS		FILE DOWNLOADING STATE (CALCULATED BY SIMULATOR)			
		STATUS	RUNNING FIRMWARE VERSION				
703861	-	Idle	090026	-	-		

Logs

This is to check the device activity

Step 1: Click on the Log Icon to view the logs

A new window opens up

Step 2: Double-click on the RED/BLUE text to open the additional information on the bottom.

DATE & TIME	DIRECTION	TYPE	NODE ID	TLV
14/03/2024 13:12:06.802	RX	[0x30] Received Data Message	0A	Show Locally Link Quality

DEVICE EMULATOR

Setup The Device Emulator

Note: Make sure you have installed the drivers

Step 1: Plug in the Device USB to the computer if this is not plugged

Step 2: On the device manager, check which COM PORT this emulator has been assigned to. e.g. COM8

Step 3. Download the device emulator software

Step 4: Using Administrator/Elevated Privileges, install the Device Emulator software

Step 5: Run the Device Emulator software

Step: 6 On the top bar, Click on **Select Comport** and select your ComPort e.g.COM 8

Step 7. On the Left of the Com Port list, select the device from the dropdown list to use e.g. “Test” and this would send out a “Hello World” transmission.

Step 8: Click **Connect**; and this would send out a “Hello World” transmission.

Using The Device Emulator

Note: Make sure you have the device setup in the device emulator

Viewing Device Activities

When the device is connected, all ongoing interactions can be seen in this window

Date & Time	ComPort	Type	Parameters	TLV	Data
21/03/2024 08:17:37.343	RX	[0x35] Hello Message			5A 0F BE 00 00 07 35 02 01 3F 0A EB 90
21/03/2024 08:17:37.344	TX	[0x01] ACK			5A 0F BE 00 00 07 01 00 3F 47 0A EB 90
21/03/2024 08:17:51.810	RX	[0x35] Hello Message			5A 0F BE 01 00 07 35 02 06 44 0A EB 90
21/03/2024 08:17:51.810	TX	[0x01] ACK			5A 0F BE 01 00 07 01 00 44 4C 0A EB 90
21/03/2024 08:17:59.422	RX	[0x33] Status Change Message			5A 0F BE 02 00 06 33 01 3A 0A EB 90
21/03/2024 08:17:59.422	TX	[0x01] ACK			5A 0F BE 02 00 07 01 00 3A 42 0A EB 90

Viewing Detailed Breakdown Of Device Activities

This is to view the details of an activity

Step 1: On the type column, click on the activity type

[0x33\] Status Change Message](#)

Step 2: On the bottom of the activity screen, the details would be shown

Data: 5A 0F BE 02 00 06 33 01 3A 0A EB 90							
SOM	Sequence	Retries	Length	Type	Data	CS	EOM
5A 0F BE	02	00	06	33	01	3A	0A EB 90
				[0x33] Status Change Message	Lost network		

Parsing Device Activities

This is to change the values of an activity

Step 1: On the data, column of the activity, right-click

0x33] Status Change Message

Step 2: Click on Copy Only Data Array

Step 3: On the left panel, Click on Parse 1 Line

Step 4: Right-Click and Paste the Text

Paste Text

Do Parse

Step 5: Click On Do Parse

The details would be shown

Data: 5A 0F BE 02 00 06 33 01 3A 0A EB 90

SOM	Sequence	Retries	Length	Type	Data	CS	EOM
5A 0F BE	02	00	06	33	01	3A	0A EB 90
				[0x33] Status Change Message	Lost network		

Step 6: Data can be changed on the paste text portion and once you click on Do Parse it would be updated.

Setup The Device Parameters in The Device Emulator

Note: Make sure you have the device connected in the device emulator

Step 1: Click on the Parameters Box and select the first on the list (Long ID)

Step 2: Click on **Set** and a new window pops up

Step 3: Enter the details on the text box this window and click **OK** to confirm

Step 4: Click on **get** and the response to this activity can be viewed on the activity window under the parameters column with details also available

Data: 5A 0F BE 18 01 0B 04 00 04 12 34 56 78 27 0A EB 90

SOM	Sequence	Retries	Length	Type	parameter address	Data Length	Parameter Value	CS	EOM
5A 0F BE	18	01	0B	04	00	04	12 34 56 78	27	0A EB 90
				[0x04] Response to Get Parameter Command	Long ID		Long ID		

Step 5: Complete each information for the device to be enrolled. In some cases, this has been pre-populated based on the device type previously selected.

Sending Enrollment Request To The Panel

This is to send a device enrollment command to the panel

Note: Make sure you have the panel set to enroll (consult the specific panel manual for instructions)

Step 1: On the device under the General Commands select **Publish Registration Request**

Step 2: Click **Send**

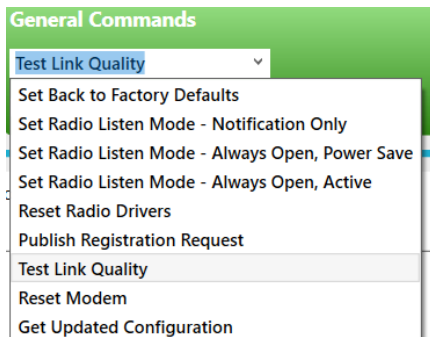

This should send an enrollment request to the panel, continue operation on the panel side.

Sending General Commands To The Panel

This is to send a device enrollment command to the panel

Note: Make sure you have the device enrolled on the panel

Step 1: On the device under the General Commands select your command, list may vary depending on device type. e.g. Test Link Quality

Step 2: Click **Send**

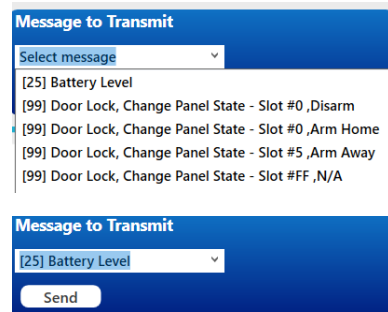

This would send a Test Link Quality Command to the panel

Sending Messages To The Panel

This is to send a device messages to the panel

Note: Make sure you have the device enrolled on the panel

Step 1: On the device under the Messages to Transmit select your message, list may vary depending on device type. e.g. Battery Level

Step 2: Click **Send**

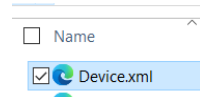

This would send a Battery Level message to the panel;

Editing Device Messages, Parameters and Commands

This is to edit the new settings for a device

Step 1: Navigate to C:\Visonic\DeviceEmulator\XML

Step 2: Open in your editor the file Device.xml

Step 3: Edit the desired the items under <DeviceReport>, <Parameters> or <GeneralCommands>

Step 4: Save the file

Note: If you want to add another device with these new parameters, you can copy the items between

<Device> and </Device>

and paste this below </Device>

Make sure you change the name in between the quotes in the Device Name="New_Name"

Load XML Device Messages, Parameters and Commands

This is to load the new settings for a device

Step 1: On the device Emulator, click on Update XML

A rectangular button with a light gray background and a thin black border. The text "Update XML" is centered in a dark gray, sans-serif font.
