

Circuit Description

- F1: When input is shorted, it performs input shorted protect function.
- L1 、 C1 、 C2: Work together with to performs EMI function.
- D1 、 D2 、 D3 、 D4: Performs rectification function.
- Q1 、 Q2 、 L2: Performs Oscillating function, let low frequency switch high frequency.
- C6 、 C7 、 TR: When switching power, the C6 and C7 take place Series resonance startup the lamp, then TR restricting current.
