

## **Circuit Description**

**Model No.: JJ-JS-082**

Transmitter Model No.: JJ-JS-082 is wireless remoter control transmit device, it has two key with control signal. Transmit encode system of the device use an advanced encode chip, and the modulation of radio frequency use a crystal control frequency modulation, circuit consisting of the following:

- 1, The radio control signal is produced and encoded by a encode signal generator-HCS301.
- 2, The RF signal is produced and modulated by oscillistor.
- 3, The RF signal is transmitting by antenna via a RF power amplifier and filter.
