Supplementary Note:
This board is formed creating a 4 layer board and then bonding bottom core and bot
the fabricated 4 layer board.
This process will create a 5 layer structure with 5 Cu layers and two drill hole pa
Once the 4 layer board is drilled , plating to 0.5 Oz Cu is required. The
bottom core and Cu are then bonded and drilled. Plated through holes should then
be plated to 0.5 Oz Cu (for the drill hole pairs between top and bottom layers). So
Silkscreen and chemical finishing should be
completed as final processing steps.

Note: board will go through (2) two 0.5 Oz plating processes.
Top & Bottom Layers: finished copper weight 35um +plating=60um
