When driving, driving is your primary duties. Answered the phone when driving a motor vehicle should be more alert and comply with local regulations.

Understanding of the wireless phone and its features, such as dial-up and rapid re-dialing. These features can help you easily dial the phone, you will not mind driving around. If there are hands-free device should be used hands-free device. If possible, use either now supply hands-free accessories, wireless phone use may increase the convenience and safety.

Wireless phone to be placed in easy-to-find place. Do not need to divert people's attention from the road to the use of mobile phones. If the time is not convenient received calls, voice mail application as far as possible, telephone response.

Call you to tell each other in the car; necessary, in traffic jams or bad weather to hang up the case. Rain, sleet, snow, ice and even when traffic is very dangerous.

Airbags, brakes, speed control system and fuel injection system should be excluded from the impact of wireless transmission. As if you encounter problems, please contact with the car dealer.

Please turn off the fuel when your mobile phone, the same situation also applies to the prohibition of the use of two-way wireless devices. Please do not flammable and explosive goods and mobile phones together, sparks may cause internal burning.

In the plane before take-off, please turn off mobile phones. To prevent interference with aircraft communications systems, in-flight must not be allowed to use the phone. In the aircraft taking off when not to use phone in accordance with safety requirements should be allowed to be with the consent of the crew.

Make sure that the aircraft in flight, cell phones should not alarm automatically open the phone.

#### **Operating Environment**

No matter where the drug should comply with the provisions of this special. If the prohibition of the use or potential danger to turn off cell phones.

When the phone to connect with other devices, the user should read the manual to learn more about safety precautions and the prohibition is not compatible with the products to connect.

In order to operate your personal safety and satisfaction, the user should be the normal work of the location of the cell phone use (to give ear, Jianbi referring to the top of the antenna).

The application of the phone, please keep the ambient temperature at -10 °C to 50 °C between.

Electronic equipment

Most of shielding radio electronic equipment, consulting manufacturer information.

- pacemaker: keep away from the pacemaker cell phone 6-inch (15cm) over the distance; should not be in the front pockets to carry cell phones; the use of pacemaker on the other side of the ear to answer phone calls, to reduce the possible interference. If you suspect that interfere with cell phone, please turn off the phone immediately.

- hearing aids: Some digital wireless phones may interfere with hearing aids, if there is such interference, with a hearing aid manufacturer.

- other medical devices: If you use other personal medical devices, please contact equipment manufacturers, to confirm whether or not these instruments shielding radio waves. A doctor can help you obtain this information. If the rehabilitation facility near the prohibition of the use of mobile phones marked, please turn off cell phones.

- car devices: wireless signal may affect the installation in cars, electronic equipment, equipment manufacturers to confirm the information.

#### **Emergency Phone**

This phone and other wireless phone, wireless signals can not guarantee that in all cases connected. Therefore, the important calls, such as medical emergency, please do not rely solely on wireless phones

To ensure that the call and answer the phone, the phone must have enough signal strength to maintain the region's network service turned on.

If you want to call the emergency phone, please standby mode, enter the local emergency telephone number, press the dial button, a call.

#### **Other important safety information**

- you use only the original manufacturers or approved accessories. The use of any unauthorized accessories may affect the use of phone performance, damage your phone, or even lead to physical danger or in violation of the national communication on the relevant provisions of the end product.

- clean phone use slightly damp cloth or anti-static, not to use or easy to have a dry cloth static electricity.

Clean the surface of the phone when they do not pay attention to the use of chemical cleaning agents. Cleaning the phone please shut down.

- Your cell phone will have electromagnetic field; please do not put in some, such as computer disks and the like in the vicinity of magnetic storage media. In television, telephone, radio and personal computers, and other electrical equipment in the vicinity of the use of mobile phones may cause interference, thus affecting the performance of the phone.
- Do not expose your phone in strong sunlight, to avoid the heat.
- Avoid all kinds of liquid into the phone itself, so as not to cause damage.
- Do not put throw, beating mobile phones, mobile phones will be destroyed in-house treatment of a circuit board.
- Do not properly co-ordinated with other devices.

#### **SAR Information**

The SAR limit of USA (FCC) is 1.6W/kg averaged over one gram of tissue. Device types D8 (FCC ID: WTID8) has also been tested against this SAR limit. This device was tested for typical body-worn operations with the back of the handset kept 1.5cm from the body. To maintain compliance with FCC RF exposure requirements, use accessories that maintain a 1.5cm separation distance between the user's body and the back of the handset. The use of belt clips, holsters and similar accessories should not contain metallic components in its assembly. The use of accessories that do not satisfy these requirements may not comply with FCC RF exposure requirements, and should be avoided.

#### **Specific Absorption Rate Data**

This Model wireless phone meets the government's requirements for exposure to radio waves.  
Your Mobile phone is a radio transmitter and receiver. It

is designed and manufactured to exceed limits for exposure to radio frequency (RF) energy set by the Federal Communication Commission (FCC) of the U.S Government. These limits are part of comprehensive guidelines and establish permitted levels of RF energy for the general population. The guidelines are based on standards that were developed by independent scientific organizations through periodic and thorough evaluation of scientific studies. The standards include a substantial safety margin designed to assure the safety of all persons regardless of age or health.

The exposure standard for wireless mobile phones employs a unit of measurement known as the Specific Absorption Rate, or SAR. The SAR limit set by the FCC is 1.6 W/Kg. Tests for SAR are conducted using standard operating positions accepted by the FCC with the phone transmitting at its highest certified power level in all tested frequency bands. Although the SAR is determined at the highest certified power level, the actual SAR level of the phone while operating can be well below the maximum value. This is because the phone is designed to operate at multiple power levels so as to use only the power required to reach the network. In general, the closer you are to a wireless base station, the lower the power output.

Before a phone model is available for sale to the public in the U.S., it must be tested and certified to the FCC that it does not exceed the limit established for safe exposure. The tests are performed in positions and locations (e.g., at the ear and worn on the body) reported to the FCC.

While there may be differences between the SAR levels of various phones and at various positions, they all meet the governmental requirements for safe exposure. Please note that improvements to this product model could cause differences in the SAR value for later products, in all cases, products are designed to be within the guidelines.

In the United States and Canada, the SAR limit for mobile

phones used by the public is 1.6 W/Kg averaged over one gram of tissue. The standard incorporates a substantial margin of safety to give additional protection for the public and to account for any variations in measurements.

#### Software Copyright Notice

The software products described in this manual may include copyrighted and third-party software stored in semiconductor memories or other media. Laws in the United States and other countries preserve for manufacturer and third party software providers certain exclusive rights for copyrighted software, such as the exclusive rights to distribute or reproduce the copyrighted software. Accordingly, any copyrighted software contained in the product may not be modified, reverse engineered, distributed, or reproduced in any manner to the extent allowed by law. Furthermore, the purchase of the product shall not be deemed to grant either directly or by implication estoppels, or otherwise, any license under the copyrights, patents or patent applications or any third-party software provider, except for the normal, non-exclusive royalty-free license to use that arises by operation of law in the sale of a product.

#### Safety and General information

This section contains important information on safe and efficient operation of your mobile phone. Read this information before using your mobile phone.

##### Exposure to Radio Frequency (RF) Energy

Your mobile phone contains a transmitter as receiver. When it is ON, it receives and transmits RF energy. When you communicate with your mobile phone, the system handling your call controls the power level at which your mobile phone transmits.

Your mobile phone is designed to comply with local regulatory requirements in your country concerning exposure of human beings to RF energy.

#### Operational Precautions

For optimal mobile phone performance and to be sure that human exposure to RF energy does not exceed the guidelines set forth in the relevant standard, always follow these instructions and precautions.

#### Product Operation

When placing or receiving a phone call, hold your mobile phone just like you would a landline phone.

If you wear the mobile phone on your body, always place the mobile phone in a manufactured-supplied or approved clip, holder, holster, case or body harness. If you do not use a body-worn accessory supplied or approved by the manufacturer, keep the mobile phone and its antenna at least 1.5 centimeters (1 inch) from your body when transmitting.

When using any data feature of the mobile phone, with or without an accessory cable, position the mobile phone and its antenna at least 1.5 centimeters from your body.

Using accessories not supplied or approved by the manufacturer may cause your mobile phone to exceed RF energy exposure guidelines.

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions:

(1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

The user's manual or instruction manual for an intentional or unintentional radiator shall caution the user that changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment. In cases where the manual is provided only in a form other than paper, such as on a computer disk or over the Internet, the information required by this section may be included in the manual in that alternative form, provided the user can reasonably be expected to have the capability to access information in that form.
