

Hello,

This letter is a request to supersede the original Operator Manual listed in FCC ID: WU5WG2 with a revised Operator Manual. The original Operator Manual was created to support both the FCC review and the FDA review and has system information of value to competitors that goes beyond the device under test. The FDA is reviewing system components that go beyond the RF device under test and its instructions for its use. The condensed manual retains information related to the device under test but removes sensitive competitive information about the data server, its screen displays, and similar competitive information that will be distributed only to professional health care staff customers.

Let me know if you require anything further
