

Photograph Showing Label Location

The label is put into the recess on the bottom of the device with the two black circles in it and I have attached a very specific annotated photo of this. The label is self adhesive and very strong and does not come off even after 5 yers on a cow. As per the rules the device is too small to show the 15.19 statement so it is on a piece of paper in the box with the devices and in the user manual. The new manual with this page and the single sheet are attached.
