Declaration – MIF for HAC RF Interference Evaluation

To Whom It May Concern,

This device, with FCC ID: **WYPP35B008AA**, Hearing Aid Compatibility Requirement is going to be certified under **ANSI C63.19-2011 version per Part 20.19**.

For Radio Frequency Interference, Speag's Audio Interference Analyzer (AIA) or other indirect or direct measurement was not used to determine the M rating.

The M rating was determined by measuring the maximum steady state average E-field values in dB (V/m) as documented in this HAC report (report No.: **SA121029C13**) and adding the MIF value in dB (V/m) using pre-determined values provided by Speag under **UID 10021 V3.1.1 (12.11.2012) / UID 10011 V3.1.1 (07.11.2012)**. The Speag-reference documentation for supporting the pre-determined MIF value is Schmid & Partner Engineering AG, **DASY5 Manual V5.2, December 2012**.

We are confirming that the Speag air interface simulation files and values used for the MIF values represent the operational modes for Hearing Aid Capability for this handset.

Sincerely Yours,

Iyad Hindi / Type Approval Manager
