

Circuit Description

The IC U1 (SQ908) is micro control unit that to control all other unit and to process data or of sorts information, for example a digital video information. The IC K9F2808U0B is a enable program memory and to storage the operating software or video data, the IC U2 is a RAM for CPU is working. A video data be obtain by the lens and sensor that be transmitting to hard disk of the personal computer via USB port.
