

ISED CABid: ES1909

Test report No:
NIE: 70542RRF.010

Partial Test report

USA FCC Part 15.209 CANADA RSS-Gen, RSS-210

(*) Identification of item tested	Wireless hearing instrument
(*) Trademark	ReSound, Beltone, Interton, GN Hearing, Jabra
(*) Model and /or type reference	CAIR1L
Other identification of the product	HW version: See sample list SW version: See sample list FCC ID: X26CAIR1L IC: 6941C-CAIR1L
(*) Features	Audio amplification, proprietary 2.4 GHz wireless functionality(Proximity), Bluetooth 5.0, 10.667 MHz wireless magnetic induction functionality and WPT at 135.59 kHz
Applicant	GN HEARING A/S Lautrupbjerg 7 2750 Ballerup, Denmark
Test method requested, standard	USA FCC Part 15.209 (10-1-20 Edition): Radiated emission limits, general requirements. CANADA RSS-Gen Issue 5 (March 2019) Amendment 1. General Requirements for Compliance of Radio Apparatus. CANADA RSS-210 Issue 10 (December 2019). Licence-Exempt Radio Apparatus: Category I Equipment ANSI C63.10-2013: American National Standard for Testing Unlicensed Wireless Devices.
Approved by (name / position & signature)	Rafael López EMC Consumer & RF Lab. Manager
Date of issue	2022-05-24

Competences and guarantees

DEKRA Testing and Certification S.A.U. is a testing laboratory accredited by the National Accreditation Body (ENAC -Entidad Nacional de Acreditación), to perform the tests indicated in the Certificate No. 51/LE 147.

DEKRA Testing and Certification S.A.U. is an FCC-recognized accredited testing laboratory with the appropriate scope of accreditation that covers the performed test in this report.

DEKRA Testing and Certification S.A.U. is an ISED-recognized accredited testing laboratory, CABid: ES1909, with the appropriate scope of accreditation that covers the performed tests in this report.

In order to assure the traceability to other national and international laboratories, DEKRA Testing and Certification S.A.U. has a calibration and maintenance program for its measurement equipment.

DEKRA Testing and Certification S.A.U. guarantees the reliability of the data presented in this report, which is the result of the measurements and the tests performed to the item under test on the date and under the conditions stated on the report and, it is based on the knowledge and technical facilities available at DEKRA Testing and Certification S.A.U. at the time of performance of the test.

DEKRA Testing and Certification S.A.U. is liable to the client for the maintenance of the confidentiality of all information related to the item under test and the results of the test.

The results presented in this Test Report apply only to the particular item under test established in this document.

IMPORTANT: No parts of this report may be reproduced or quoted out of context, in any form or by any means, except in full, without the previous written permission of DEKRA Testing and Certification S.A.U.

General conditions

1. This report is only referred to the item that has undergone the test.
2. This report does not constitute or imply on its own an approval of the product by the Certification Bodies or competent Authorities.
3. This document is only valid if complete; no partial reproduction can be made without previous written permission of DEKRA Testing and Certification S.A.U.
4. This test report cannot be used partially or in full for publicity and/or promotional purposes without previous written permission of DEKRA Testing and Certification S.A.U. and the Accreditation Bodies.

Uncertainty

Uncertainty (factor $k=2$) was calculated according to the DEKRA Testing and Certification S.A.U. internal document PODT000.

Data provided by the client

The following data has been provided by the client:

1. Information relating to the description of the sample ("Identification of the item tested", "Trademark", "Model and/or type reference tested").
2. The sample of the model CAIR1L is a wireless hearing aid.
3. Testing performed with the information provided in 0437220[B]_RADIO_TEST_PLAN_CAIR1L document.

DEKRA Testing and Certification S.A.U. declines any responsibility with respect to the information provided by the client and that may affect the validity of result.

Usage of samples

Samples undergoing test have been selected by: The client.

Environmental conditions

In the control chamber, the following limits were not exceeded during the test:

Temperature	Min. = 15 °C Max. = 35 °C
Relative humidity	Min. = 20 % Max. = 75 %

In the semi-anechoic chamber, the following limits were not exceeded during the test.

Temperature	Min. = 15 °C Max. = 35 °C
Relative humidity	Min. = 20 % Max. = 75 %

In the chamber for conducted measurements, the following limits were not exceeded during the test:

Temperature	Min. = 15 °C Max. = 35 °C
Relative humidity	Min. = 20 % Max. = 75 %

Remarks and comments

The tests have been performed by the technical personnel: Jose Manuel Jimenez.

Used instrumentation:

Conducted Measurements:

TEST CONDITIONS

POWER SUPPLY (V):

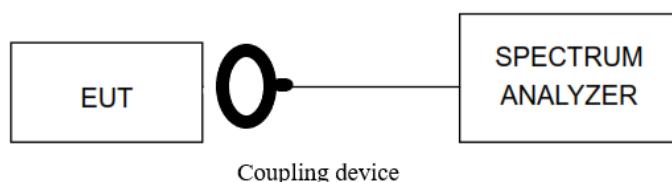

Vnominal:	3.8 Vdc
Type of Power Supply:	DC voltage from rechargeable battery
Type of Antenna:	Integral coil antenna

TEST FREQUENCIES:

Nominal Operating Frequency: 10.66 MHz

CONDUCTED MEASUREMENTS

The equipment under test EUT was set up in a shielded room and it is connected to the spectrum analyzer through a RF cable and a coupling device.

RADIATED MEASUREMENTS

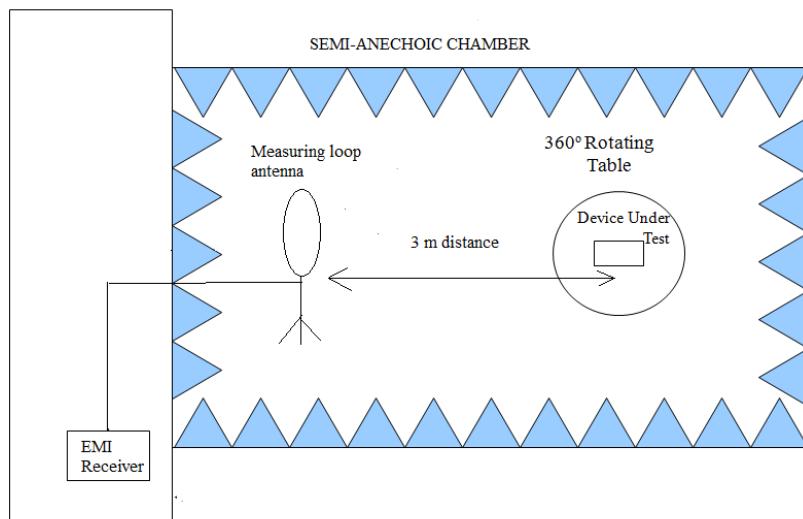

All radiated tests were performed in a semi-anechoic chamber. The measurement antenna (Loop antenna for the range between 9 kHz to 30 MHz) is situated at a distance of 3 m.

For radiated emissions in the range 9 kHz to 30 MHz that is performed at a distance closer than the specified distance, an inverse proportionality factor of 40 dB per decade is used to normalize the measured data for determining compliance.

The equipment under test was set up on a non-conductive platform above the ground plane and the situation and orientation was varied to find the maximum radiated emission.

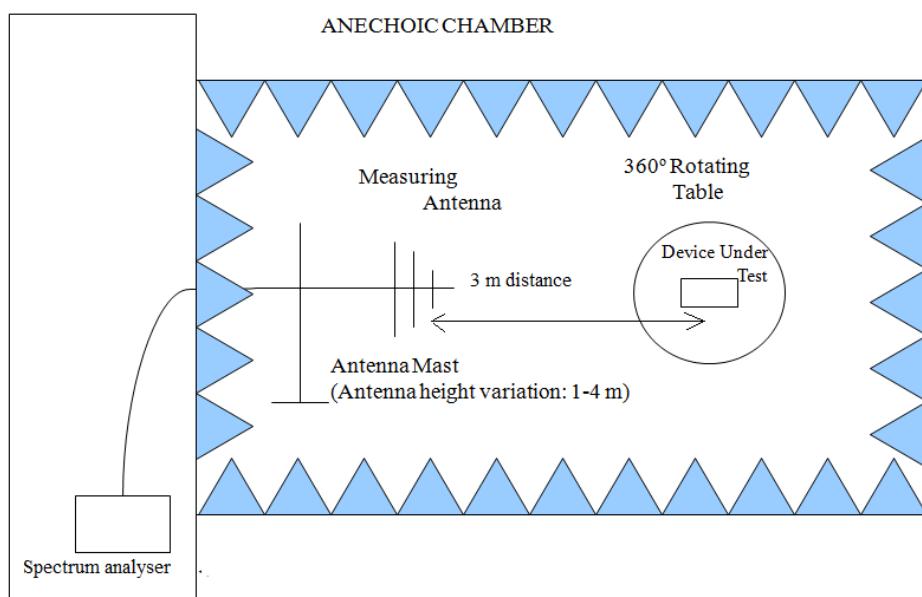

In the range between 9 kHz and 30 MHz the measurements were made in the three different orientation planes of the loop antenna to determine the maximum received field. Measurements above 30 MHz up to 200 MHz were made in both horizontal and vertical planes of polarization.

Radiated measurements setup $f < 30$ MHz:

Shielded Control Room For
Radiated Measurements

Radiated measurements setup $f > 30$ MHz:

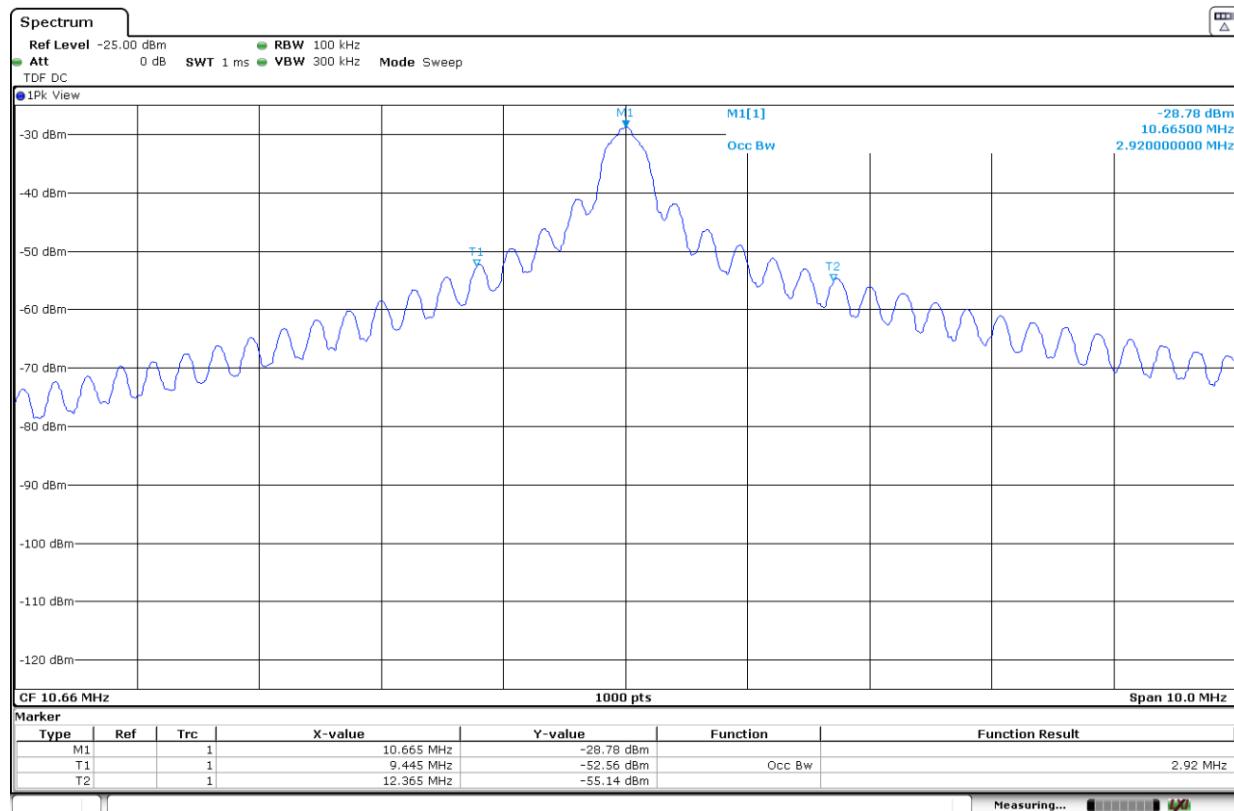

Shielded Control Room For
Radiated Measurements

Occupied Bandwidth

RESULTS:

99% Bandwidth (MHz)	2.92
Measurement uncertainty (kHz)	<±17.33

15.209 (a) / RSS-Gen 8.9., RSS-210 7.2. General field strength and Transmitter emission limits

SPECIFICATION:

Except as provided elsewhere in this subpart, the emissions from an intentional radiator shall not exceed the field strength levels specified in the following table:

Frequency Range (MHz)	Field strength (μ V/m)	Field strength ($\text{dB}\mu$ V/m)	Magnetic field strength (H-Field) (μ A/m)	Measurement distance (m)
0.009-0.490	2400/F(kHz)	-	6.37/ F(kHz)	300
0.490-1.705	24000/F(kHz)	-	63.7/ F(kHz)	30
1.705 - 30.0	30	29.54	0.08	30
30 - 88	100	40	-	3
88 - 216	150	43.5	-	3
216 - 960	200	46	-	3
Above 960	500	54	-	3

Additionally, the level of any transmitter unwanted emission shall not exceed the level of the transmitter's fundamental emission.

RESULTS:

All tests were performed in a semi-anechoic chamber at a distance of 3 m, except for the measurement of the fundamental emission that was performed at a distance of 1 m due to its extremely low emission level. The maximum peak value of the fundamental emission was measured as the worst case.

The spectrum was inspected from 9 kHz to 200 MHz searching for spurious signals.

The field strength is calculated by adding correction factor to the measured level from the spectrum analyser. This correction factor includes antenna factor and cable loss.

Fundamental emission:

Measured E($\text{dB}\mu$ V/m) at 1m (Peak value)	32.47
E($\text{dB}\mu$ V/m) extrapolated to 30 m (40 dB/decade)	-26.61
Equivalent level ($\text{dB}\mu$ A/m) at 30 m	-78.11
Measurement uncertainty (dB)	<±3.04

Verdict: PASS

Frequency range 9 kHz - 30 MHz:

No spurious frequencies detected at less than 10 dB below the limit.

Measurement uncertainty (dB)	<±3.04
------------------------------	--------

Verdict: PASS

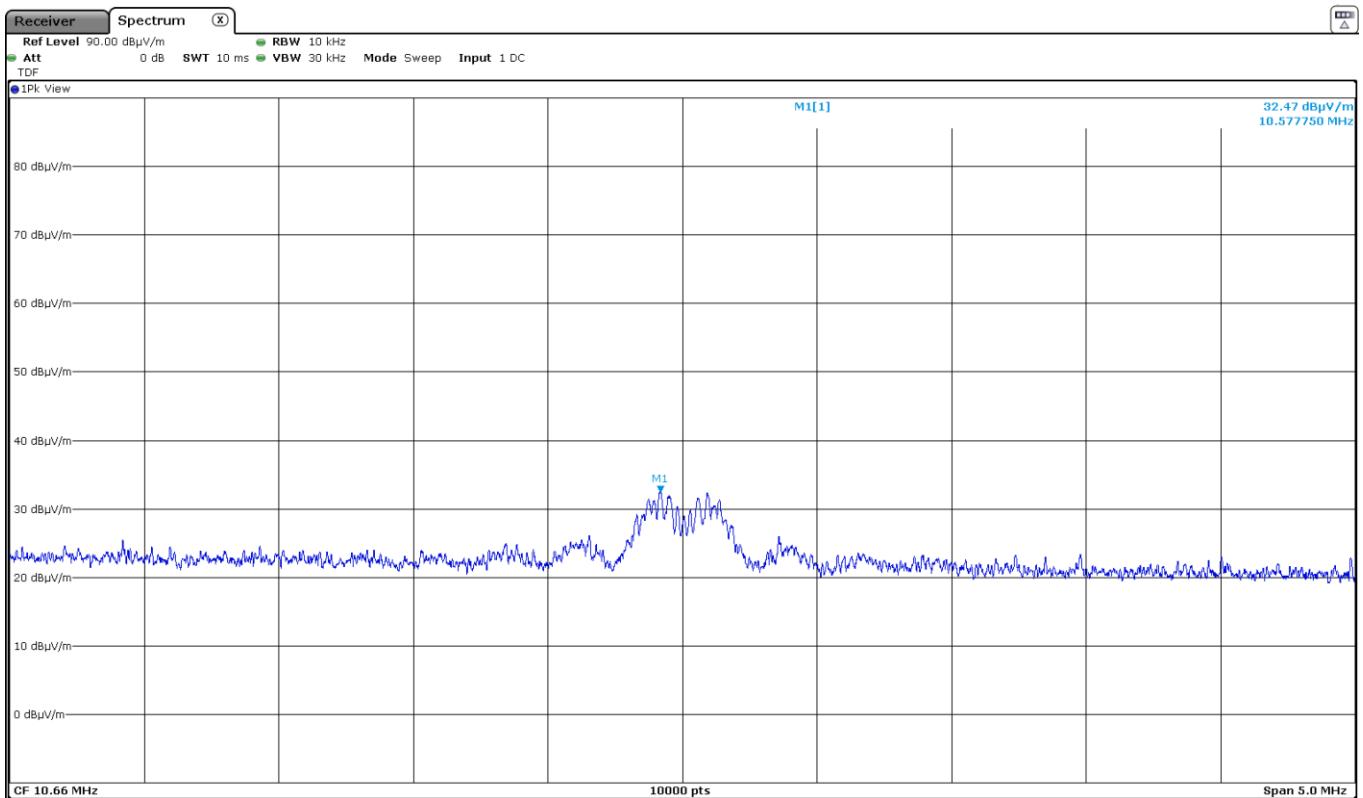

Frequency range 30 MHz - 200 MHz:

No spurious frequencies detected at less than 10 dB below the limit.

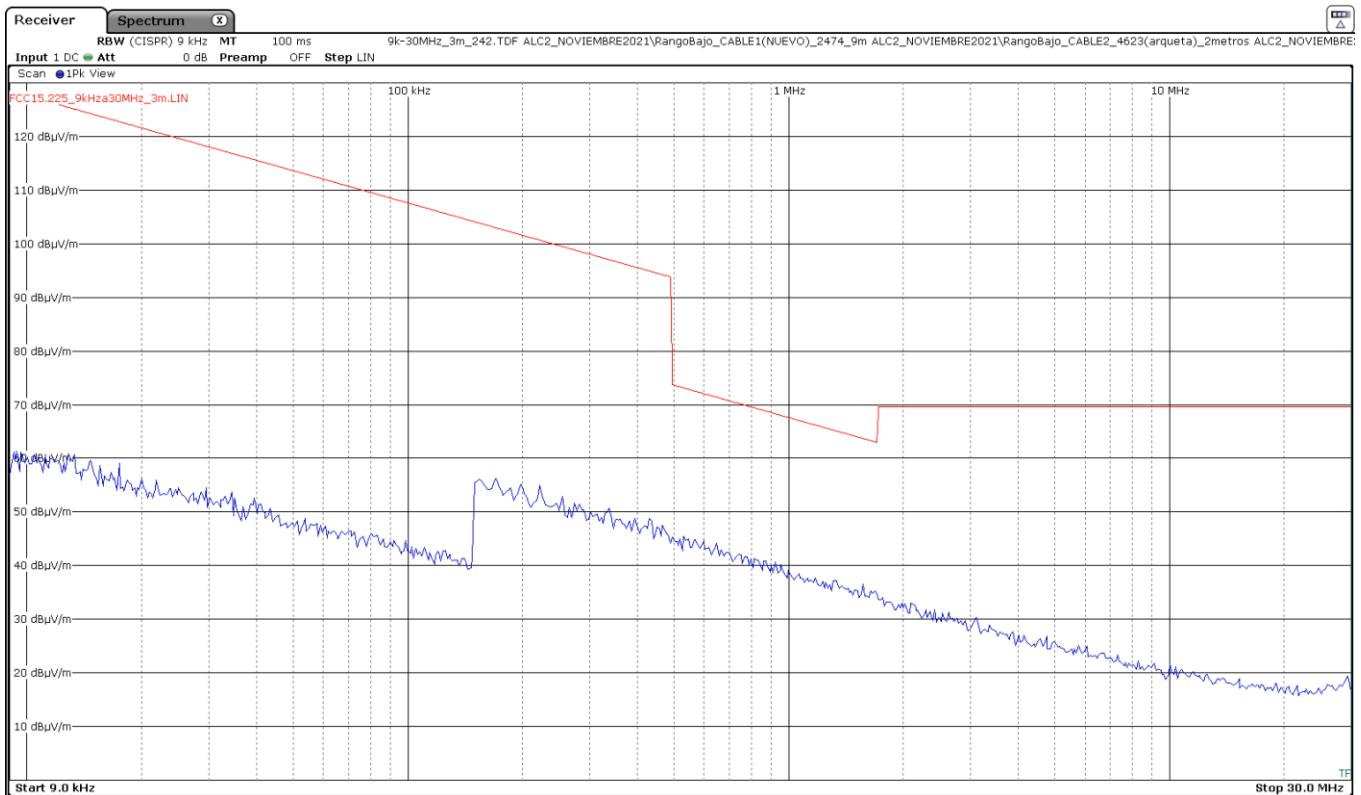

Measurement uncertainty (dB)	<±5.01
------------------------------	--------

Verdict: PASS

FUNDAMENTAL EMISSION:

FREQUENCY RANGE 9 kHz - 30 MHz:

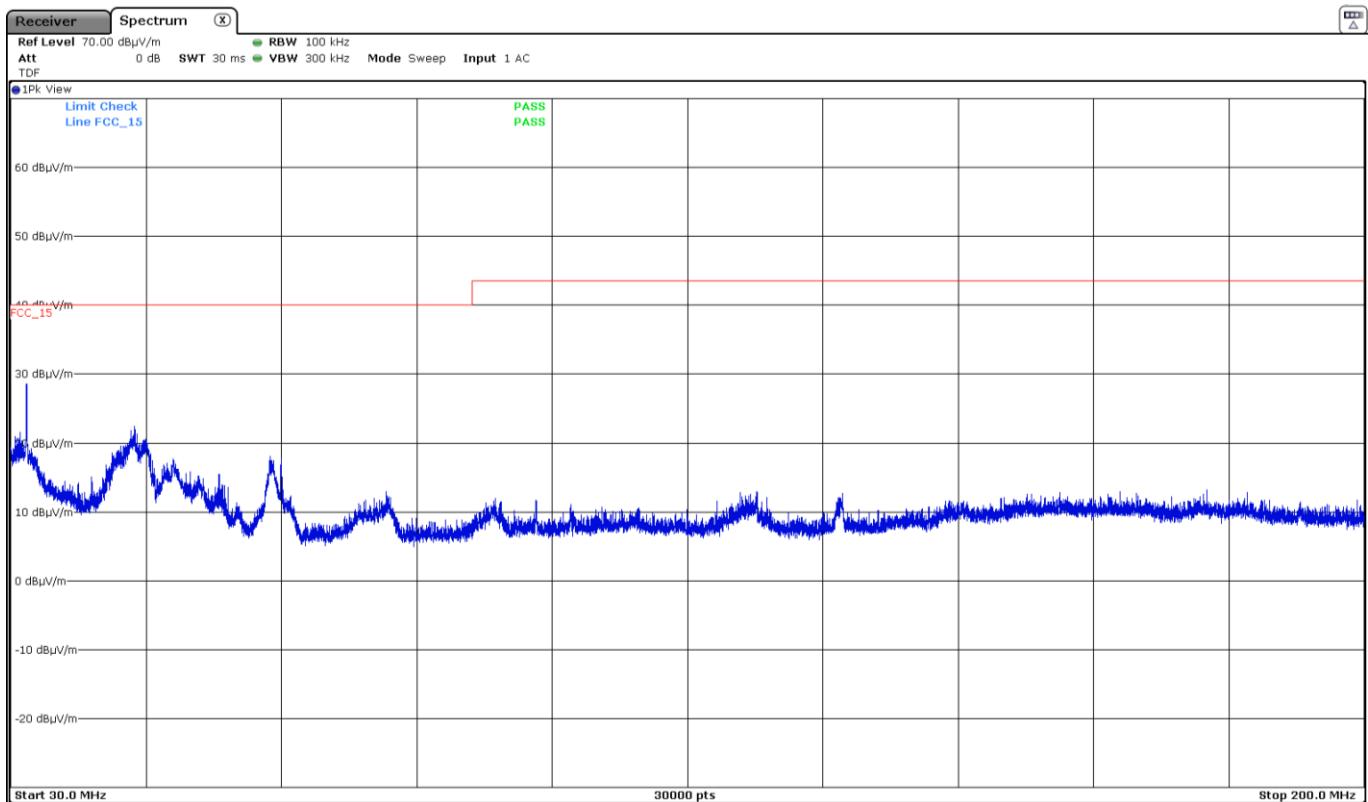

Resolution bandwidth:

200 Hz for $9 \text{ kHz} \leq f \leq 150 \text{ kHz}$
9 kHz for $150 \text{ kHz} \leq f \leq 30 \text{ MHz}$

Note: The scan is performed with a peak detector.
The limits shown in the above plot are extrapolated to 3 meters.

FREQUENCY RANGE 30 - 200 MHz:

Note: The scan is performed with a peak detector.
