

FCC / ISED Test Report

For:

Axon Enterprise, Inc.

Brand:

Axon

Marketing name:

Axon Fleet 2, Front Camera

Model #:

AX1014

Product Description:

In-car Camera System

FCC ID: X4GS00947C

Applied Rules and Standards:

47 CFR Part 15.407 (UNII) & 5 GHz (UNII)

REPORT #: EMC_AXONN_010_20001_FCC_15.407_UNII1_Rev2

DATE: 2/10/2022

A2LA Accredited

IC recognized #
3462B

1 Assessment

The following device was evaluated against the applicable criteria specified in FCC rules Parts 15.407 of Title 47 of the Code of Federal Regulations.

No deviations were ascertained.

According to section 5 of this report, the overall result is Pass.

Company	Description	Model #
Axon Enterprise, Inc.	In-car Camera System	AX1014

Responsible for Testing Laboratory:

2/10/2022	Compliance	Wang, Kevin (EMC Lab Manager)	
Date	Section	Name	Signature

Responsible for the Report:

2/10/2022	Compliance	Ghanma, Issa (EMC Engineer)	
Date	Section	Name	Signature

The test results of this test report relate exclusively to the test item specified in Section 3.
CETECOM Inc. USA does not assume responsibility for any conclusions and generalizations drawn from the test results with regard to other specimens or samples of the type of the equipment represented by the test item. The test report may only be reproduced or published in full. Reproduction or publication of extracts from the report requires the prior written approval of CETECOM Inc. USA.

2 Administrative Data

2.1 Identification of the Testing Laboratory Issuing the EMC Test Report

Company Name:	CETECOM Inc.
Department:	Compliance
Street Address:	411 Dixon Landing Road
City/Zip Code	Milpitas, CA 95035
Country	USA
Telephone:	+1 (408) 586 6200
Fax:	+1 (408) 586 6299
EMC Lab Manager:	Wang, Kevin
Responsible Project Leader:	Sivaraman, Sangeetha

2.2 Identification of the Client

Applicant's Name:	Axon Enterprise, Inc.
Street Address:	17800 N. 85th St
City/Zip Code	Scottsdale, AZ 85255
Country	USA

2.3 Identification of the Manufacturer

Manufacturer's Name:	Same as Client /-----
Manufacturers Address:	-----
City/Zip Code	-----
Country	-----

3 Equipment Under Test (EUT)

3.1 EUT Specifications

Model No:	AX1014	
Marketing name:	Axon Fleet 2, Front Camera	
FCC-ID :	X4GS00947C	
HW Version :	Rev B	
SW Version :	Skytest_ab2_v2_mfgtest	
Product Description:	In-car Camera System	
Module name/number:	Chipset: Cypress/CYW43340XKUBG	
Frequency Range / number of channels:	Frequency Range (MHz)	Channel Number
	5150-5250	36-48 [4]
Modes of Operation / Channel Bandwidths:	IEEE Std. 802.11(a/n)	Data Rate / MCS
	a	6-54 Mbps
	n: HT20	MCS 0-7
Power Supply/ Rated Operating Voltage Range:	- The Axon Fleet 2 Front Camera is powered by the vehicle's 12V power supply. The power is regulated from a separate battery box, mounted elsewhere in the vehicle, which supplies temporary power to the camera if the vehicle ignition is shut off. - Constant Power Voltage: 9V - 18V Nominal 12V	
Operating Temperature Range:	Low -30° C, High +60° C	
Max. conducted output Power:	+16.49 dBm	
Sample Revision	☐ Prototype Unit; ☒ Production Unit; ☐ Pre-Production	

Antenna Information as declared:	❖ Internal, Chip antenna • Gain [dBi]: - o 5150 MHz : 4.07 - o 5180 MHz : 4.02 - o 5200 MHz : 4.39 - o 5240 MHz : 4.98
Other Radios included in the device:	❖ Bluetooth 4.0 Low Energy ❖ Wi-Fi 2.4 GHz b/g/n ❖ Wi-Fi 5 GHz UNII-3

3.2 EUT Sample details

EUT #	Serial Number	HW Version	SW Version	Notes/Comments
1	X54113059	Rev B	Skytest_ab2_v2_mfgtest	Conducted measurement
2	X54113099	Rev B	Skytest_ab2_v2_mfgtest	Radiated measurement

3.3 Accessory Equipment (AE) details

AE #	Type	Model	Manufacturer	Serial Number
1	-----	-----	-----	N/A

3.4 Test Sample Configuration

EUT Set-up #	Combination of AE used for test set up	Comments
1	EUT#1	The measurement equipment was connected to the 50 ohm RF port of the EUT.
2	EUT#2	The internal antenna was connected.

3.5 Mode of Operation details

Mode of Operation	Description of Operating modes	Additional Information
Op. 1	Wi-Fi 5 GHz 802.11a/n/	❖ Putty terminal used to communicate with the device, and sending commands provided by client, that will not be available to end-user, to configure the Wi-Fi radio: ▪ Power level : 16 dBm ▪ Mode : a/n ▪ Transmit mode : Continuous TX ▪ Duty cycle : 100% ▪ Hopping : No ▪ Hopping Type : Single Frequency ▪ Channel : Low , Mid, High ▪ Data rate: - o a mode : 6 Mbps - o n mode : MCS0
Op. 2	Wi-Fi 5 GHz 802.11a	❖ Putty terminal used to communicate with the device, and sending commands provided by client, that will not be available to end-user, to configure the Wi-Fi radio: ▪ Power level : 16 dBm ▪ Mode : a ▪ Transmit mode : Continuous TX ▪ Duty cycle : 100% ▪ Hopping : No ▪ Hopping Type : Single Frequency ▪ Channel : Low , Mid, High ▪ Data rate: - o a mode : 6 Mbps

3.6 Justification for Worst Case Mode of Operation

During the testing process, the EUT was tested with transmitter sets on low, mid and high channels, and highest possible duty cycle and output power.

For radiated measurements;

- All data in this report show the worst case of Wi-Fi radio at the highest output power band representing worst case transmission mode.
- All data in this report show the worst case between horizontal and vertical antenna polarizations and for all orientations of the EUT.

4 Subject of Investigation

The objective of the measurements done by CETECOM Inc. was to assess the performance of the EUT according to the relevant requirements specified in FCC rules Part 15.407 of Title 47 of the Code of Federal Regulations.

This test report is to support a request for new equipment authorization under:

- FCC ID: X4GS00947C

5 Measurement Results Summary

Test Specification	Test Case	Temperature and Voltage Conditions	Mode	Pass	NA	NP	Result
§15.407(e)	Emission Bandwidth	Nominal	Op.1	■	☐	☐	Complies
§15.407(a)	Power Spectral Density	Nominal	Op.1	■	☐	☐	Complies
§15.407(a)	Maximum Output Power	Nominal	Op.1	■	☐	☐	Complies
§15.407; 15.205	Band Edge Compliance	Nominal	Op.1	■	☐	☐	Complies
§15.407(g); 2.1055	Frequency Stability	Extreme conditions	Op.1	■	☐	☐	Complies
§15.407(b); §15.209; 15.205	Radiated TX Spurious Emissions	Nominal	Op.2	■	☐	☐	Complies
§15.207(a)	AC Conducted Emissions	Nominal	-	☐	■	☐	Note 1 Note 2

Note 1: NA= Not Applicable; NP= Not Performed.

Note 2: The EUT is a vehicular device powered by DC main; hence this test is not applicable.

6 Measurement Uncertainty

Where relevant, the following measurement uncertainty levels have been estimated for tests performed on the apparatus, with 95% confidence interval (in dB delta to result), based on a coverage factor $k=1$.

Radiated measurement

9 kHz to 30 MHz	± 2.5 dB (Magnetic Loop Antenna)
30 MHz to 1000 MHz	± 2.0 dB (Biconilog Antenna)
1 GHz to 40 GHz	± 2.3 dB (Horn Antenna)

According to TR 102 273 a multiplicative propagation of error is assumed for RF measurement systems. For this reason the RMS method is applied to dB values and not to linear values as appropriate for additive propagation of error. Also used: <http://physics.nist.gov/cuu/Uncertainty/typeb.html>. The above calculated uncertainties apply to direct application of the Substitution method. The Substitution method is always used when the EUT comes closer than 3 dB to the limit.

6.1 Environmental Conditions During Testing:

The following environmental conditions were maintained during the course of testing:

- Ambient Temperature: 20-25° C
- Relative humidity: 40-60%

6.2 Dates of Testing:

1/11/2021 – 1/22/2021

7 Measurement Procedures

7.1 Radiated Measurement

The radiated measurement is performed according to ANSI C63.10 (2013)

- The exploratory measurement is accomplished by running a matrix of 16 sweeps over the required frequency range with R&S Test-SW EMC32 for 4 positions of the turntable, two orthogonal positions of the EUT, and both antenna polarizations. This procedure exceeds the requirement of the above standards to cover the 3 orthogonal axes of the EUT. A max peak detector is utilized during the exploratory measurement. The Test-SW creates an overall maximum trace for all 12 sweeps and saves the settings for each point of this trace. The maximum trace is part of the test report.
- The 10 highest emissions are selected with an automatic algorithm of EMC32 searching for peaks in the noise floor and ensuring that broadband signals are not selected multiple times.
- The maxima are then put through the final measurement and again maximized in a 90deg range of the turntable, fine search in the frequency domain and height scan between 1m and 4m.
- The above procedure is repeated for all possible ways of power supply to EUT and all supported modulations.
- In case there are no emissions above the noise floor level only the maximum trace is reported as described above.
- The results are split up into up to 4 frequency ranges due to antenna bandwidth restrictions. A magnetic loop is used from 9 kHz to 30 MHz, a Biconilog antenna is used from 30 MHz to 1 GHz, and two different horn antennas are used to cover frequencies up to 40 GHz.

Radiated Emissions Test Setup 30MHz-1GHz Measurements

Radiated Emissions Test Setup above 1GHz Measurements

7.1.1 Sample Calculations for Field Strength Measurements

Field Strength is calculated from the Spectrum Analyzer/ Receiver readings, taking into account the following parameters:

1. Measured reading in dB μ V
2. Cable Loss between the receiving antenna and SA in dB and
3. Antenna Factor in dB/m

All radiated measurement plots in this report are taken from a test SW that calculates the Field Strength based on the following equation:

$$FS \text{ (dB}\mu\text{V/m)} = \text{Measured Value on SA (dB}\mu\text{V)} + \text{Cable Loss (dB)} + \text{Antenna Factor (dB/m)}$$

Example:

Frequency (MHz)	Measured SA (dB μ V)	Cable Loss (dB)	Antenna Factor Correction (dB)	Field Strength Result (dB μ V/m)
1000	80.5	3.5	14	98.0

7.2 RF Conducted Measurement Procedure

Testing procedures are based on 558074 D01 15.247 Meas Guidance v05r02 – “GUIDANCE FOR COMPLIANCE MEASUREMENTS ON DIGITAL TRANSMISSION SYSTEM, FREQUENCY HOPPING SPREAD SPECTRUM SYSTEM, AND HYBRID SYSTEM DEVICES OPERATING UNDER SECTION 15.247 OF THE FCC RULES” - April 2, 2019, by the Federal Communications Commission, Office of Engineering and Technology, Laboratory Division.

- Connect the equipment as shown in the above diagram.
- Adjust the settings of the SA (Rohde-Schwarz Spectrum Analyzer) to connect the EUT at the required mode of test.
- Measurements are to be performed with the EUT set to the low, middle, and high channels and for worst-case modulation schemes.

8 Test Result Data

8.1 Duty cycle

8.1.1 Measurement according to FCC 789033 D02 General UNII Test Procedures New Rules v02r01;

DUTY CYCLE, TRANSMISSION DURATION AND MAXIMUM POWER CONTROL LEVEL

Measurements of duty cycle and transmission duration shall be performed using one of the following techniques:

2) The zero-span mode on a spectrum analyzer or EMI receiver if the response time and spacing between bins on the sweep are sufficient to permit accurate measurements of the on-and off-times of transmitted signal.

- I. Set the center frequency of the instrument to the center frequency of the transmission.
- II. Set RBW $\geq$ EBW if possible; otherwise, set RBW to the largest available value.
- III. Set VBW $\geq$ RBW.
- IV. Set detector = peak or average.
- V. The zero-span measurement method shall not be used unless both RBW and VBW are $>50/T$, where T is defined in item a1) of 12.2, and the number of sweep points across duration T exceeds 100.
(For example, if VBW and/or RBW are limited to 3 MHz, then the zero-span method of measuring duty cycle shall not be used if $T \geq 16.7$ microseconds.)

8.1.2 Test conditions and setup:

Ambient Temperature	EUT Set-Up #	EUT operating mode	Power Input
23.8°C	1	Op.1	12V DC

8.2 Maximum Conducted Output Power

8.2.1 Measurement according to FCC 789033 D02 General UNII Test Procedures New Rules v02r01

Spectrum Analyzer settings for method SA-1 (trace averaging with the EUT transmitting at full power throughout each sweep):

- I. Set span to encompass the entire emission bandwidth (EBW) (or, alternatively, the entire 99% occupied bandwidth) of the signal.
- II. Set RBW = 1 MHz
- III. Set the VBW $\geq$ 3 MHz
- IV. Number of points in sweep $\geq$ 2 Span / RBW. (This ensures that bin-to-bin spacing is $\leq$ RBW/2, so that narrowband signals are not lost between frequency bins.)
- V. Sweep time = Auto Couple
- VI. Detector = power averaging (rms), if available. Otherwise, use sample detector mode.
- VII. If transmit duty cycle < 98%, use a video trigger with the trigger level set to enable triggering only on full power pulses. Transmitter must operate at maximum power control level for the entire duration of every sweep. If the EUT transmits continuously (i.e., with no off intervals) or at duty cycle $\geq$ 98%, and if each transmission is entirely at the maximum power control level, then the trigger shall be set to "free run."
- VIII. Trace mode = Trace average at least 100 traces in power averaging (rms) mode.
- IX. Compute power by integrating the spectrum across the EBW (or, alternatively, the entire 99% occupied bandwidth) of the signal using the instrument's band power measurement function with band limits set equal to the EBW (or occupied bandwidth) band edges. If the instrument does not have a band power function, sum the spectrum levels (in power units) at 1 MHz intervals extending across the EBW (or, alternatively, the entire 99% occupied bandwidth) of the spectrum.

8.2.2 Limits:

FCC§15.407

Sub-band 5150-5250 MHz

- I. For Client Devices the maximum conducted output power over the frequency band of operation shall not exceed 250 mW provided the maximum antenna gain does not exceed 6 dBi.

Note: All limits are conducted. If transmitting antennas of directional gain greater than 6 dBi are used, both the maximum conducted output power and the maximum power spectral density shall be reduced by the amount in dB that the directional gain of the antenna exceeds 6 dBi.

8.2.3 Test conditions and setup:

Ambient Temperature	EUT Set-Up #	EUT operating mode	Power Input	Antenna Gain [dBi]
23.8°C	1	Op.1	12V DC	@ 5180 MHz : 4.02 @ 5200 MHz : 4.39 @ 5240 MHz : 4.98

8.3 Power Spectral Density

8.3.1 Measurement according to FCC 789033 D02 General UNII Test Procedures New Rules v02r01

Spectrum Analyzer Settings for Peak PSD in 1 MHz Band with Method SA-1:

- I. Use the settings in section 8.2.1
- II. Use the peak marker function to determine the maximum amplitude level within the RBW. The result is the Maximum PSD over 1 MHz reference bandwidth

8.3.2 Limits:

FCC§15.407

Sub-band 5150-5250 MHz

- I. For Client Devices, the maximum power spectral density shall not exceed 11 dBm in any 1 MHz band

Note: All limits are conducted. If transmitting antennas of directional gain greater than 6 dBi are used, both the maximum conducted output power and the maximum power spectral density shall be reduced by the amount in dB that the directional gain of the antenna exceeds 6 dBi.

8.3.3 Test conditions and setup:

Ambient Temperature	EUT Set-Up #	EUT operating mode	Power Input	Antenna Gain [dBi]
23.8°C	1	Op.1	12V DC	@ 5180 MHz : 4.02 @ 5200 MHz : 4.39 @ 5240 MHz : 4.98

8.4 Band Edge Compliance

8.4.1 Measurement according to FCC 789033 D02 General UNII Test Procedures New Rules v02r01 and ANSI C63.10 (2013)

Non-Restricted Band Edge and Restricted Band Edge Peak Measurement Spectrum Analyzer Settings:

- a) Follow the requirements in II.G.3, "General Requirements for Unwanted Emissions Measurements."
- b) Maximum emission levels are measured by setting the analyzer as follows:
 - (i) RBW = 1 MHz.
 - (ii) VBW $\geq$ 3 MHz.
 - (iii) Detector = Peak.
 - (iv) Sweep time = auto.
 - (v) Trace mode = max hold.
 - (vi) Allow sweeps to continue until the trace stabilizes. Note that if the transmission is not continuous, the time required for the trace to stabilize will increase by a factor of approximately $1/x$, where x is the duty cycle. For example, at 50% duty cycle, the measurement time will increase by a factor of two relative to measurement time for continuous transmission.

Restricted Band Edge Average Measurement Spectrum Analyzer Settings:

- a) Follow the requirements in II.G.3, "General Requirements for Unwanted Emissions Measurements."
- b) Average emission levels shall be measured using one of the following two methods.
- c) Method AD (Average Detection): Primary method
 - (i) RBW = 1 MHz.
 - (ii) VBW $\geq$ 3 MHz.
 - (iii) Detector = power averaging (rms), if $\text{span}/(\# \text{ of points in sweep}) \leq \text{RBW}/2$. Satisfying this condition may require increasing the number of points in the sweep or reducing the span. If the condition is not satisfied, the detector mode shall be set to peak.
 - (iv) Averaging type = power averaging (rms)
 - (v) Sweep time = auto.
 - (vi) Perform a trace average of at least 100 traces if the transmission is continuous. If the transmission is not continuous, the number of traces shall be increased by a factor of $1/x$, where x is the duty cycle. For example, with 50% duty cycle, at least 200 traces shall be averaged. (If a specific emission is demonstrated to be continuous—i.e., 100% duty cycle—rather than turning on and off with the transmit cycle, at least 100 traces shall be averaged.)

8.4.2 Limits non-restricted band:

FCC§15.407 (b); RSS-247 6

- For transmitters operating in the 5.15-5.25 GHz band: All emissions outside of the 5.15-5.35 GHz band shall not exceed an e.i.r.p. of -27 dBm/MHz.

8.4.3 Limits for restricted band §15.407/15.209/15.205 and RSS-Gen 8.9/8.10

- *PEAK LIMIT= 74 dBμV/m @3m =-21.23 dBm
- *AVG. LIMIT= 54 dBμV/m @3m =-41.23 dBm
- Start frequency & stop frequency according to frequency range specified in the restricted band table in FCC section 15.205 & RSS-Gen 8.10

Only spurious emissions are permitted in any of the frequency bands listed below			
MHz	MHz	MHz	GHz
0.090-0.110	16.42-16.423	399.9-410	4.5-5.15
10.495-0.505	16.69475-16.69525	608-614	5.35-5.46
2.1735-2.1905	16.80425-16.80475	960-1240	7.25-7.75

8.5 Emission Bandwidth 26 dB, and 99%

8.5.1 Measurement according to FCC 789033 D02 General UNII Test Procedures New Rules v02r01

Spectrum Analyzer Settings for 26 dB EBW:

- Set RBW = approximately 1% of the emission bandwidth
- Set the VBW > RBW
- Detector = Peak
- Trace mode = Max Hold
- Sweep = Auto Couple
- Allow the trace to stabilize
- Measure the maximum width of the emission that is 26 dB down from the maximum of the emission. Compare this with the RBW setting of the analyzer. Readjust RBW and repeat measurement as needed until the RBW/EBW ratio is approximately 1%

Spectrum Analyzer Settings for 99% Occupied Bandwidth

- Set center frequency to the nominal EUT channel center frequency
- Set span = 1.5 times to 5.0 times the OBW
- Set RBW = 1% to 5% of the OBW
- Set VBW $\geq 3 \times$ RBW
- Video averaging is not permitted. Where practical, a sample detection and single sweep mode shall be used. Otherwise, peak detection and max hold mode (until the trace stabilizes) shall be used
- Use the 99% power bandwidth function of the instrument (if available)

8.5.2 Limits:

FCC §15.247(e) and RSS-407 6.2.4.1

- For equipment operating in the band 5725-5850 MHz, the minimum 6 dB bandwidth shall be at least 500 kHz.

8.5.3 Test conditions and setup:

Ambient Temperature	EUT Set-Up #	EUT operating mode	Power Input	Antenna Gain [dBi]
23.8°C	1	Op.1	12V DC	@ 5180 MHz : 4.02 @ 5200 MHz : 4.39 @ 5240 MHz : 4.98

8.6 Frequency Stability

8.6.1 Measurement according to:

➤ **FCC: CFR 47 Part 2.1055**

➤ **ANSI C63.10-2013 6.8**

- **6.8.1 Frequency stability with respect to ambient temperature.**

- a) Supply the EUT with a nominal ac voltage or install a new or fully charged battery in the EUT. If possible, a dummy load shall be connected to the EUT because an antenna near the metallic walls of an environmental test chamber could affect the output frequency of the EUT. If the EUT is equipped with a permanently attached, adjustable-length antenna, then the EUT shall be placed in the center of the chamber with the antenna adjusted to the shortest length possible. Turn ON the EUT and tune it to one of the number of frequencies shown in 5.6.
- b) Couple the unlicensed wireless device output to the measuring instrument by connecting an antenna to the measuring instrument with a suitable length of coaxial cable and placing the measuring antenna near the EUT (e.g., 15 cm away), or by connecting a dummy load to the measuring instrument, through an attenuator if necessary.

NOTE – An instrument that has an adequate level of accuracy as specified by the procuring or regulatory agency is the recommended measuring instrument.

- c) Adjust the location of the measurement antenna and the controls on the measurement instrument to obtain a suitable signal level (i.e., a level that will not overload the measurement instrument but is strong enough to allow measurement of the operating or fundamental frequency of the EUT).
- d) Turn the EUT OFF and place it inside the environmental temperature chamber. For devices that have oscillator heaters, energize only the heater circuit.
- e) Set the temperature control on the chamber to the highest specified in the regulatory requirements for the type of device and allow the oscillator heater and the chamber temperature to stabilize.
- f) While maintaining a constant temperature inside the environmental chamber, turn the EUT ON and record the operating frequency at startup, and at 2 minutes, 5 minutes, and 10 minutes after the EUT is energized. Four measurements in total are made.
- g) Measure the frequency at each of frequencies specified in 5.6.
- h) Switch OFF the EUT but do not switch OFF the oscillator heater.

- i) Lower the chamber temperature by not more than 10 °C, and allow the temperature inside the chamber to stabilize.
- j) Repeat step f) through step i) down to the lowest specified temperature.

➤ Spectrum Analyzer settings:

- RBW =200 kHz
- VBW ≥ 1 MHz
- Set span = 10 MHz
- Sweep time = auto couple
- Detector = Pk
- Trace mode = MaxHold
- Use N dB Down function to set the low and high frequency.

8.6.1.1 Test conditions and setup:

EUT Set-Up #	EUT operating mode	Power Input (V DC)
1	Op. 1	12V DC

8.6.1.2 Measurement result:

- *1 RCF: Reference Center Frequency.
- *2 F low: Low frequency; -6 dB
- *3 F high: High frequency; +6 dB
- *4 CCF: Calculated Center Frequency; $CCF = F \text{ low} + (F \text{ high} - F \text{ low})/2$
- *5 Variation = RCF - CCF
- *6 PPM: $[(CCF/RCF)-1] * 10^6$

Plot #	Measurement Time (Minutes)	Temperature (°C)	RCF *1 (MHz)	F Low *2 (MHz)	F High *3 (MHz)	CCF *4 (MHz)	Variation *5 [MHz]	PPM *6 (+-)100

8.7 Radiated Transmitter Spurious Emissions

8.7.1 Measurement according to ANSI C63.10 (2013)

Spectrum Analyzer Settings:

- Frequency = 9 KHz – 30 MHz
- RBW = 9 KHz
- Detector: Peak

- Frequency = 30 MHz – 1 GHz
- Detector = Peak / Quasi-Peak
- RBW= 120 KHz (<1GHz)

- Frequency > 1 GHz
- Detector = Peak / Average
- RBW = 1 MHz

- Radiated spurious emissions shall be measured for the transmit frequencies, transmit power, and data rate for the lowest, middle and highest channel in each frequency band of operation and for the highest gain antenna for each antenna type, and using the appropriate parameters and test requirements.
- The highest (or worst-case) data rate shall be recorded for each measurement.
- For testing frequencies below 30 MHz at distance other than the specified in the standard, the limit conversion is calculated by using the FCC materials for the ANSI 63 committee issued on January, 27 1991.

8.7.2 Limits:

FCC §15.407

- (b) Undesirable emission limits. Except as shown in paragraph (b)(7) of this section, the maximum emissions outside of the frequency bands of operation shall be attenuated in accordance with the following limits:
 - o (1) For transmitters operating in the 5.15-5.25 GHz band: All emissions outside of the 5.15-5.35 GHz band shall not exceed an e.i.r.p. of -27 dBm/MHz.
- Unwanted emissions below 1 GHz must comply with the general field strength limits set forth in §15.209.
- The provisions of §15.205 apply to intentional radiators operating under this section.

FCC §15.209

- Except as provided elsewhere in this subpart, the emissions from an intentional radiator shall not exceed the field strength levels specified in the following table:

Frequency of emission (MHz)	Field strength (μV/m)	Measurement Distance (m)	Field strength @ 3m (dBμV/m)
0.009–0.490	2400/F(kHz) / -----	300	-
0.490–1.705	24000/F(kHz) / -----	30	-
1.705–30.0	30 / (29.5)	30	-
30–88	100	3	40 dBμV/m
88–216	150	3	43.5 dBμV/m
216–960	200	3	46 dBμV/m
Above 960	500	3	54 dBμV/m

FCC §15.205

- Except as shown in paragraph (d) of this section, only spurious emissions are permitted in any of the frequency bands listed below:

MHz	MHz	MHz	GHz
0.090-0.110	16.42-16.423	399.9-410	4.5-5.15
10.495-0.505	16.69475-16.69525	608-614	5.35-5.46
2.1735-2.1905	16.80425-16.80475	960-1240	7.25-7.75

13.36-13.41			

- Radiated emissions which fall in the restricted bands, as defined in §15.205(a), must also comply with the radiated emission limits specified in §15.209(a) (see §15.205(c)).
 *PEAK LIMIT= 74 dBμV/m
 *AVG. LIMIT= 54 dBμV/m

8.7.3 Test conditions and setup:

Ambient Temperature	EUT Set-Up #	EUT operating mode	Power Input	Antenna Gain [dBi]
23.8°C	2	Op.2	12V DC	@ 5180 MHz : 4.02 @ 5200 MHz : 4.39 @ 5240 MHz : 4.98

8.7.4 Measurement result:

Plot #	Channel #	Scan Frequency	Lowest margin emission [dBμV/m]	Limit	Result
60 – 62	Low (36)	30 MHz – 18 GHz	41.33	See section 8.7.2	Pass
63 – 67	Mid (40)	9 kHz – 40 GHz	41.42	See section 8.7.2	Pass
68 – 70	High (48)	30 MHz – 18 GHz	41.44	See section 8.7.2	Pass

8.7.5 Measurement Plots:

Plot # 60 Radiated Emissions: 30 MHz – 1 GHz

Tx Frequency: 5180 MHz

Mode: 802.11a
