Product Variations

I have developed new remote transmitters: a key fob transmitter and a wall mounted transmitter. They have the same board (hardware) but different cases. In addition, all transmitters have a common software that supports two formats: the old PTX-6 format (for legacy transmitters) and the new PTX-8 format (for new transmitters). By default, the transmitters are set to PTX-6 format mode; to switch to PTX-8 format mode, you need to press buttons 1 and 2 simultaneously. Since PTX-6 and PTX-8 formats have different parameters, RF tests of the transmitter were carried out in different modes.
