The device is used outdoors in field conditions. To provide protection the device is encased in a rubber "boot" that may hide any label on the back of the device. More so the device may be permanently attached to a stand preventing access to the back cover.

The software defined device is equipped with an LCD display. In accordance with FCC 2.925(e), we will display the FCC ID on the LCD for several seconds during the device startup. The photo below shows the LCD display during FCC ID display:

The Compliance information is included in the User Manual per FCC 15.19(a)(5).
