### Attention and Precautions

Please read these brief rules. Violation of these rules might cause danger or break laws.

#### 1 Safety Precautions

##### 1.1 Road safety comes first

When driving, care must be taken for using phone; if driving conditions are poor, please pull up at road side to use phone.

##### 1.2 Switch off your phone in hospitals

Please abide by relevant regulations or rules. Please switch off when close to medical equipment.

##### 1.3 Switch off your phone in aircrafts

Wireless phones can cause interference. Using phones in aircraft is both dangerous and illegal.

##### 1.4 Switch off your phone when refuelling

Do not use the phone at a refuelling station or near fuels or chemicals.

##### 1.5 Switch off your phone when close to blasting area

To avoid interfering with blasting operations, turn your phone **OFF** when in a “blasting area” or in areas posted: “turn off twoway radio”. Obey all signs and instructions.

#### 2 Precautions When Using Phone

##### 2.1 Interference

All phones are subject to interference, which will affect their performance.

##### 2.2 Use sensibly

Use phone only in its normal position. Please do not touch antenna area unless necessary.

##### 2.3 Use qualified servicing

Only qualified maintenance staff can assemble or repair the equipment.

##### 2.4 Waterproof

Your phone is not waterproof, please keep it dry.

##### 2.5 Emergency calls

Make sure the phone is switched on and in service. Input emergency service number and press Dial key, give your location and do not end the call until told to do so.

#### 3 Precautions When Using Batteries

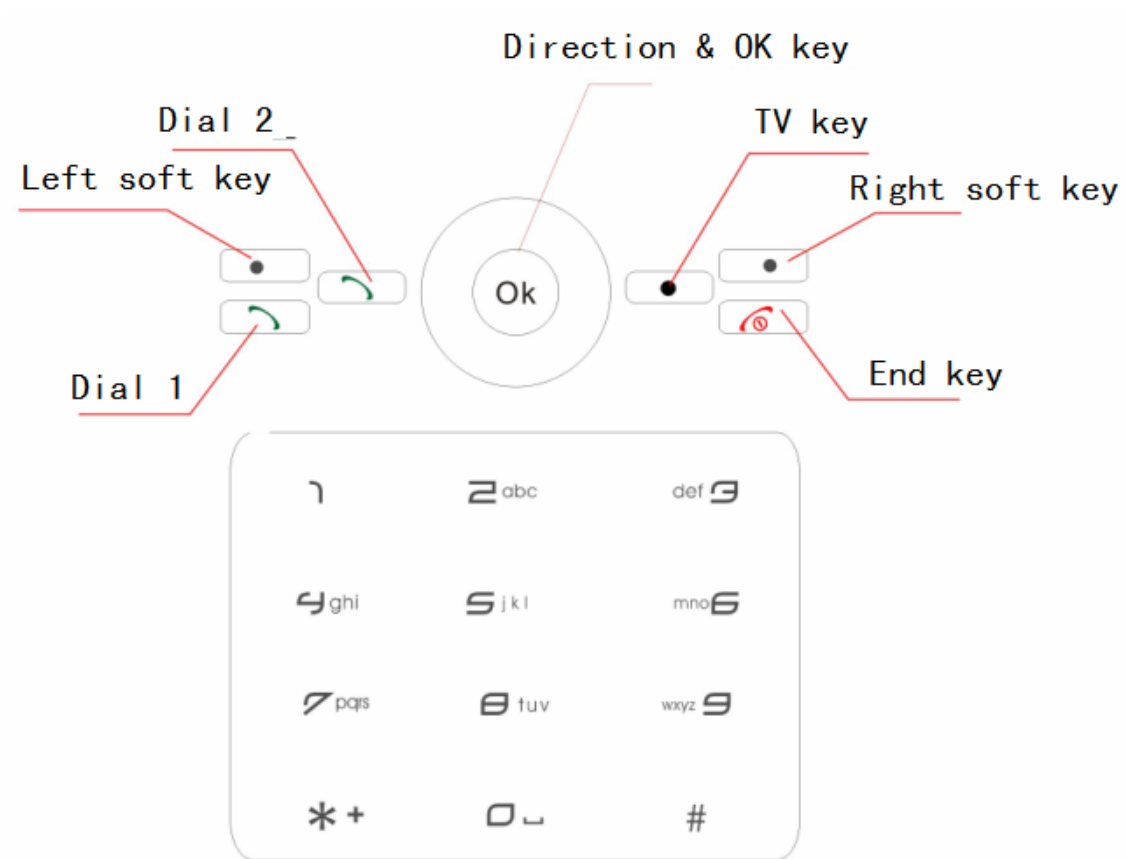

3.1 Keep the batteries away from fire; do not dispose of batteries in a fire lest there should be danger.

3.2 Do not dispose of used batteries in rubbish, and they should be sent to designated recycling center.

#### 4 Precautions for children

Keep the phone out of the reach of children, lest children treat it as toy and cause personal injury.

## Description of keypad keys

- **Left soft key:** Carry out the functions of the indicator showed at the lower left corner of the monitor.
- **Right soft key:** Carry out the functions of the indicator showed at the lower right corner of the monitor.
- **TV key:** In standby state, press this key enter TV .
- **Dial 1/2 key:** Use it answer and dial a phone call.
- **End key:** End or reject a call. Press and hold the key to switch on/off the phone. In other circumstances, press the key to return to standby state.
- **Number key:** Enter numbers and characters. In standby state, press and hold “1” to enter Voicemail, number 2-9 may be set up as shortcut keys in phone setup; in menus, press number key to fast choose the menu option.
- **\* key:** This key has different functions in different state or function menus.
- **# key:** This key has different functions in different state or function menus.

**Note:** In this manual, "Press a key" means you press the key and then release it immediately; "Press and hold a key" means you press the key and hold on for 2 seconds or more before releasing it. 1, 2 (i.e. up, down, right and left keys) are referred to collectively as Navigation key.

## Getting Started

### 1. Battery

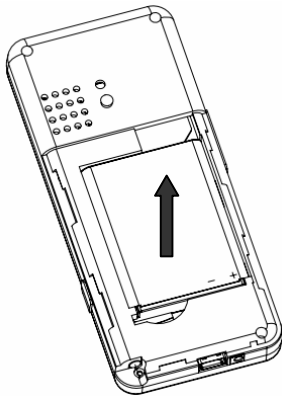

The battery at its initial condition is charged to 50% full, and can be used after unwrapping.

For the first three times of charging, do not recharge until the battery is totally exhausted, so that the battery can reach its best usage performance.

### 1.1 Removing and installing battery

For removing:

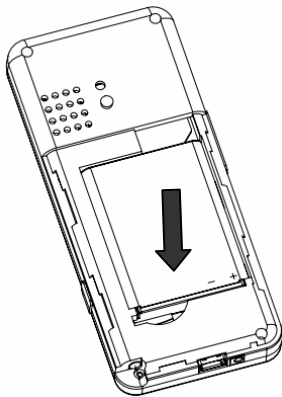

- A. Push the battery back cover in the arrow direction;
- B. Lift the battery up as indicated by the arrow;
- C. Take the battery out.

**Warning:** Make sure to switch off the phone before taking out SIM card, otherwise your SIM card might be damaged.

For installing:

- A. Follow the arrow direction, place the metal contact points of the battery upward and flush with metal contact points in the battery bay, then insert the bottom of battery into battery bay;
- B. Place the back cover of the battery onto the phone squarely, and push in the direction of the arrow till it clicks into place.

### 1.2 Charging Battery

While charging, the power supply indicator at phone's screen icon zone will flash in a rotation manner, if the phone is off while charging, a charging screen will still appear, indicating that the phone is recharging. If the phone is still being overused while the power supply is insufficient, the recharging indicator will appear on the screen after the recharging has started for a while.

When the power supply indicator at the screen's icon zone shows full and stops flashing, it

means charging has completed. If it takes place when the phone is off, the screen will display charging-finished icon. The process generally takes about 2.5 hours. It is normal that the battery, the phone and the charger will become hot during the charging process.

Charging completing, disconnect the phone and the charger from the AC power supply.

**Note:** Battery must be charged in a well ventilated place with surrounding temperature at  $-10^{\circ}\text{C}\sim+55^{\circ}\text{C}$ , and it is imperative that a charger provided by manufacturer is used. Using unauthorized charger might cause danger, which also violates warranty terms prescribed by the manufacturer. If the charging temperature is too high or too low, the phone will automatically give warning and stop charging, so as to prevent damages to battery or dangers.

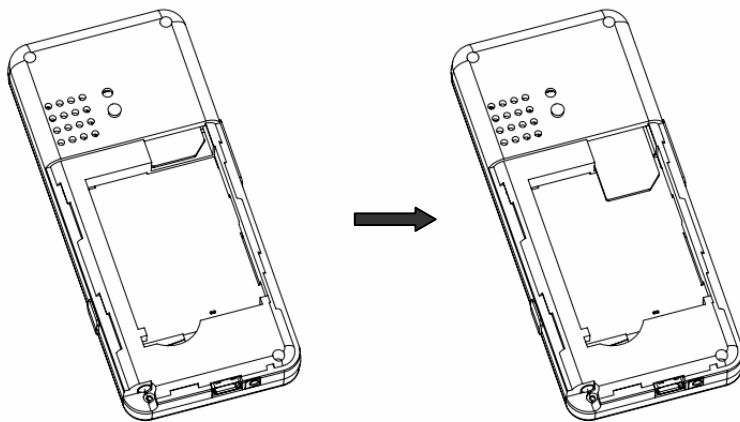

## 2. Connecting to Network

### 2.1 SIM card

A valid SIM (Subscriber Identity Module) card must be inserted in the phone before using it. All information related to making connection to the network are recorded in the chips of SIM card, including the names, phone numbers and short messages you have stored in the SIM card Phone book. In order to prevent loss or damage of the info in the SIM card, it is necessary to avoid touching metal contact surface, and keep SIM card far from electricity current and magnet.

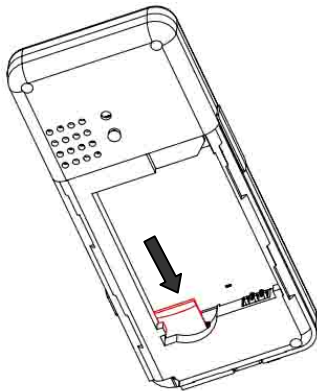

### 2.2 Inserting and removing SIM card

- Switch off the phone; remove battery and other external power connection, as shown in the image.
- Insert SIM card into SIM card socket.
- When you need to remove SIM card, please switch off the phone first, remove battery, then remove the card.

### 2.3 Inserting and removing memory card

- Switch off the phone; remove battery and other external power connection.
- Insert memory card into card slot as shown in the image.

## 2.4 Switch on/off phone

To switch on or switch off phone, please press and hold the *End* key. If you have switched on phone without inserting SIM card in the first place, the phone will prompt "Insert SIM card". Then the screen will display the following prompts in sequential order:

Enter phone password – if you have set up phone lock password.

Enter PIN – if you have set up SIM card password.

Search – the phone will search till finding appropriate network connection.

## 2.5 Unlocking SIM card

To prevent illegal usage, PIN (Personal Identification Number) code is adopted to encrypt for protection of your SIM card. Selecting this option and if having set up PIN code protection, you have to enter PIN code each time you start it, unlocking SIM card to use the mobile phone.

Users can erase SIM card password; however, in this case SIM card cannot prevent illegal usage.

- Press and hold the *End* key to switch on the phone;

- Enter PIN1 code, use right soft key to delete input-errors, left soft key for "OK". For instance, if PIN1 setting is 1234, then enter the following input: 1 2 3 4 "OK"

If there are three consecutive input errors, your SIM card will be locked up by the network, the phone will inquire PUK1 code.

**Note:** Your service provider will set up a standard PIN (4 to 8 digits) number for your SIM card, you should change it into your private password as soon as possible.

## 2.6 Unloking phone

To prevent phone from being illegally used, you can set up mobile phone lock Password for protection. Selecting this option, you must input mobile phone lock password to unlocking it and make it normal. Users can switch off mobile phone lock, but illegal usage cannot be prevented for mobile phone in this case.

- Pressing the hang-up key continuously to start up mobile phone.

- Input mobile phone lock Password, right soft key to delete input-errors, left soft key for "OK".

For instance, if mobile phone Password is set up as 0000, then input the following: 0 0 0 0 "OK".

If you forget mobile phone Password, you have to contact local authorized repair center, so as to unlock your mobile phone's Password.

## 2.7 Connecting to network

After SIM card is successfully unlocked, the phone will automatically search available network (with searching showing on the screen). Once the connection is made, the name of the service provider will be displayed on the top central part of the text and graphic area. At this time your phone has been connected to the service network.

**Note:** If the screen prompts "Emergency ", this means you have moved out of the normal

network coverage (service range) or your card has not passed authentication, but you can still transmit emergency calls based on signal strength.

## **Basic Functions**

### **1. Making a call**

When the logo of service provider appears on the display screen, you can dial or receive calls. The info bar at the upper left corner of the display screen shows network signal strength (when there are 5 info bars the signal is at its strongest).

The call quality is very likely to be affected by obstructions; therefore movement in a small area can effectively improve call performance.

#### **1.1 Making domestic calls**

Save addresskey to enter phone number, then press Dial Key to make the call. If the user needs to change phone number, press right soft key "Clear" back and delete numbers. Dialing animation will be displayed on the screen during dialing. Call state info will be shown on the screen after the called party ends the call

You can enter and dial domestic call following the order:

Area code Phone number Dial

#### **1.2 Dialing extension number of fixed-line telephone**

Some extension numbers of fixed-line telephone cannot be connected directly, you must dial the switchboard phone number, then press \* key to switch continually, until the screen displays "P", then dial extension number.

You can dial extension numbers of fixed-line telephone in the following order:

Area code Switchboard number P Extension number Dial Key

#### **1.3 Dialing international calls**

To make an international call, you may press \* key to switch continually, till the screen displays the pre-digit symbol "+" for international long distance call, which will enable you to make a call from any country without knowing the local international access code (for instance, in China it is 86).

You can enter numbers in the following sequence to make an international call: + country code complete phone number Dial Key

After inputting prefix number, input the code and the complete phone number of the wanted country. The country code follows usual practice, such as Germany 49, UK 44, Sweden 46, etc.

Like making an international call, the "0" before city code number should be dropped.

For instance, if making a call to a service hotline from other countries to Shanghai, you should dial: +86 21 114

#### **1.4 Dialing phone numbers in the call records**

Every phone number you have dialed or received will be stored in the list of phone call records. The latest dialed, received and missed numbers will be listed, according to their types, in the respective menu of dialed calls, received calls and missed calls. When call record list is full, the old numbers will automatically be deleted. To view the list, do the followings:

- In standby state press Dial key to view the record for all dial calls.
- All phone numbers in the list can be dialed directly by pressing the Dial key.
- When the list is displayed, press "OK" to read the details, then "options" to Save or Delete the number.

### **2. Emergency calls**

As long as in the network service range (which can be confirmed by checking the signal strength bars on the top left corner of the screen), you can always call emergency service. If your network supplier does not provide roaming service in your area, the screen will display "Emergency", to inform you that only emergency call is permitted. If you are within the network service range, you can also make emergency calls even without the SIM card.

### 3. Answering a call

Simply press dialing key can answer an incoming call. If an earphone has been connected, use the button on the earphone to answer a call, and if it is not convenient for you to press it, set automatic answer as on, assuring that the earphone is plugged on, so as to make calls automatically answered while the phone rings or vibrates. If Any Key answer function is chosen, pressing any key, other than Hangup key and right soft key, can answer an incoming call.

### 4. Call records

Your phone can also store call records of the latest missed calls, received calls, dialed calls, the time of last call as well as total amount of received calls and total dialed calls for you.

### 5. Call options

In connected state, pressing left soft key "Options" can enter call option, or pressing right soft key "H-free" to activate speaker, Under activated-handsfree condition, press right soft key "H- Held " to switch off speaker. Operation methods of call options are the same with that of Function menu.

This call options can only be viewed during call process, moreover, the functions of call waiting, call holding, and conference calls need service support, please contact your service provider for details.

In the call options, you can make the following operations:

- Hold single call

Make the current call hold.

- Hold single call

End the current call.

- New call

Enter new dialing interface.

- Phone book

Enter Phone book menu.

- Messages

Enter Short message menu. Owing to restriction of network engagement, MMS function is barred during call process.

- Sound Recorder

Record the current call.

- Background sound

Setup the background sound for the current calling.

- MoYin Tell

Setup the MoYin for the calling.

- Mute

Setting of switches, which disables transmission of local call when Mute function is on.

- DTMF

Operations of DTMF switching on and off

- Conference\*

Enter multiple party conference call state. By following the prompts, you can have the following functions: receive waiting calls, add them into multiple party call, maintain the multiple party call, talk privately with one party of the conference while maintaining all other callers, connect one party in the call conference with another party while exiting the multiple party call oneself, maintain one party of the multiple party call and end current call and all other maintained calls.

**Note:** The menu marked \* items will only appear in special circumstances. For conference function, it is necessary to apply for service supply to corresponding service operator.

## Usage of function menu

## 1. Scrolling search and select function

- In standby state, press left soft key "menu" to enter function menu, or during the call, press "Options" to enter call option menu.
- At all main menu or sub-menu interface, it is possible to press up, down, right and left keys of keypad (under menu of page scrolling, press up or down keys to realize scrolling up or down) to scroll to the function you need, then press left soft key, or OK key, to enter that function option.

## 2. Shortcut selection function

Generally sub-menu and menu option are equipped with shortcut numbers, which are their corresponding index numbers.

Enter different options by pressing shortcut number, in the menu list input short-cut number of sub-menu option to highlight the selected corresponding options.

## 3. Exit menu

In function menu, generally you can exit a menu by pressing right soft key or press END key to return to standby state.

# Instructions of Function menu

## 1. Services

### 1.1 WAP

Your mobile phone supports service based on Wireless Application Protocol (WAP). You can access a variety of WAP services, such as news, weather forecast and flight schedule, etc. These services are specially designed for mobile phones, and are maintained by WAP service providers.

WAP service needs network supported, regarding the availability, price and taxation of WAP service, please consult your network operator and / or the service provider that provide you with the service you need. Service provider will also provide explanations on how to use its services.

Under internet network service menu, you can use value-added service that the network operator provides you. This menu mainly includes the following menu option: Browse Homepage, Bookmarks, recent pages, offline pages, input address, Service Inbox.

- Homepage: select "Homepage", you can log on to Homepage. Homepage is the WAP site you have set up in [Browser setup].

- Book marks: Select "bookmarks", display each existing bookmark of bookmark list. Select one needed bookmark, you can perform operations on the bookmark such as Go to, Edit, Delete, Delete all, Add new bookmark.

**Note:** Before use, please confirm your mobile phone's bookmark list is not empty.

- Recent Pages: Under this sub-menu, the web records you recently visited are listed, so as to facilitate you to directly select "Connect" to visit that webpage when history record has been selected.

- Offline pages: Show the page has been saved in the phone.

- Enter Address: Under this sub-menu, enter the URL address to be visited for WAP service, then press "OK" to complete, which will enable you to be connected to the WAP site you wish to access. So as to provide you with a flexible channel to visit the network in addition to bookmark information and webpage history record.

- Service Inbox: "Service Inbox ", through which received service information can be viewed. Your mobile phone can receive service information (also called PUSH info) sent by your service provider. For instance: service information can be a notice on relevant news summary, which can contain a piece of text information or a kind of WAP service address. For service information, there are three processing methods: Read, Delete and Delete All.

- Settings: Under browser setup sub-menu, it includes setup menus of Edit account, Browser options, Service Message Settings, Clear Cache, Clear Cookies, for you to set up

relevant contents of WAP service.

## 1.2 Data Account

### GPRS

This sub-menu will give a list of GPRS access account data of the current WAP setting file, by selecting one certain setup file, you can edit the following contents of the GPRS access account data in the setting file:

- Account Name: This enables editing and setup the name of account data file.
- APN: Enter APN,.
- User Name: User identity of APN server, default is empty.
- Password: Password necessary for APN server to recognize your identity, the default value is empty.
- Auth. Type: Selecting General or Encryption by pressing right and left keys ,you can finish setting, thus setting up the authentication method adopted in the WAP identity authentication.

## 2. Phone Book

You can store info such as names, phone numbers, and mobile phone numbers.

Phone numbers can be stored in your mobile phone or SIM card. The mobile phone can store up to 500 records, the amount of phone numbers that SIM card can store vary with its capacity.

In standby state, you can visit this interface by right soft key or auxiliary pen to click-press " Names ".

### 2.1 Quick Search

Browse all records in the contacts.

### 2.2 Search contact

Search needed records by names in the Phone book.

### 2.3 Add New contact

Add a new number record to SIM card or mobile phone in Phone book.

### 2.4 Caller Groups

This mobile phone supports incoming call group function, you can select groups, view and edit group details under incoming call group list interface.

**Note:** Member addition or reduction of incoming groups is only limited to phone record on the mobile phone.

### 2.5 Batch Operation

You can do the operation such as copy all , delete , import/export .

### 2.6 Phonebook Settings

The options such as space inquiry, or saving position are available .

**Memory Status:** contacts memory status condition in SIM card and the phone will be displayed in n/m format

**Preferred Storage:** can choose SIM card/phone as a preferred storage.

**Fields:** setup vCard details, such as: Home number, Company name, Email address, etc.

**My vCard:** edit my card, or send my card.

**vCard version:** Can choose to use version 2.1 or 3.0 version of the card version.

**Note:** When phone number records are stored in SIM card, only record the info of name and phone number.

## 3. Fun & Games

### 3.1 msn

1. Select start, input username and password, then press left soft key (Menu), select sign in. If you use it first time, you should select settings to set the data account.

2. Select updated version will update the MSN version.

### 3.2 Games

There are some games in your phone .You can play with them.

### 3.3 Themes

Your phone support themes.

## 4. Call Center

### 4.1 Call history

You can view info related to call records, including: Missed Calls, Dialed Calls, Received Calls, Delete call logs,call times, Call Cost, Text message counter, GPRS Counter. If you only have been inserted a SIM card, you can only see one of the SIM card phone records.

### 4.2 Call Settings

For a general setting,such as: SIM1/SIM2 call settings,Voice changer, Low battery protect,Advance settings.

## 5. Messages

### 5.1 SMS

Enhanced Short message (EMS) is supported, and picture, animation, melody, and sound can be added in the Short message. Short message can be created by templates.

## FCC RF Exposure Information and Statement

The SAR limit of USA (FCC) is 1.6 W/kg averaged over one gram of tissue. Device types M6730 (FCC ID: X77-M6730) has also been tested against this SAR limit. The highest SAR value reported under this standard during product certification for use at the ear is 0.843W/kg and when properly worn on the body is 0.421W/kg. This device was tested for typical body-worn operations with the back of the handset kept 1.5cm from the body. To maintain compliance with FCC RF exposure requirements, use accessories that maintain a 1.5cm separation distance between the user's body and the back of the handset. The use of belt clips, holsters and similar accessories should not contain metallic components in its assembly. The use of accessories that do not satisfy these requirements may not comply with FCC RF exposure requirements, and should be avoided.

This device complies with part 15 of the FCC rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

NOTE: The manufacturer is not responsible for any radio or TV interference caused by unauthorized modifications to this equipment. Such modifications could void the user's authority to operate the equipment.

NOTE: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation.

If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.
