**Declaration of modification**

With reference to CE/FCC test report R2742\_1.pdf

Section 1.2 Modifications to EUT and Peripherals

The modifications made during testing namely

220uf cap replacing 100uF on input. 470nf capacitor across input and 2 inductors

(Impedance 100MHz ( $\Omega$ ) = 1000, Rated Current (mA) = 200, DC Resistance ( $\Omega$ ) = 0.45, Maximum Impedance ( $\Omega$ ) = 1250)

Were all introduced prior to manufacture and all parts now have that modification.
