### **Radiocontrol 2/4 channels for windlass or thrusters control**

Kompass radiocontrol units have been planned to action nautical windlasses and thrusters. They are available in 2 or 4 channels version and are both provided with two 1.5V AAA and a receiver that is connected to the 12V/24V batteries that normally are onboard.

By means of a programming procedure it is possible to employ up to five different transmitters with the same receiver; this allows motor operation from the different areas of the boat.

Radio transmission operates in 433MHz; in order to improve radio transmission it is possible to connect to the receiver an optional external antenna.

Luigi Fossati.

A handwritten signature in blue ink, which appears to read 'Luigi Fossati'.
