## TEST REPORT

**Application No.:** SZEMO090804562RF  
**Applicant:** AAMP of Flordia, dba AAMP of America  
**Manufacturer/ Factory:** Shenzhen Addition Audio Science & Technology Co., Ltd.  
**Address of Applicant:** 13160 56th Court, Clearwater, Florida  
**Address of Manufacturer/ Factory:** Ming Zhuo Industry Park, Lou Village, Gong Ming Town, Bao'an District, Shenzhen, China  
**FCC ID:** XBD-FM3  
**Fundamental Frequency :** 88.1MHz-107.9MHz  
**Channel step:** 200KHz  
**Equipment Under Test (EUT):**  
Name: iSimple FM3  
Model No.: ISFM31, FM3♣  
Trade Mark: iSimple  
♣ Please refer to section 2 of this report which indicates which item was actually tested and which were electrically identical.  
**Standards:** FCC PART 15, SUBPART C (Section 15.239)  
**Date of Receipt:** 06 August 2009  
**Date of Test:** 06 to 17 August 2009  
**Date of Issue:** 18 August 2009

<b>Test Result :</b>	<b>PASS *</b>
----------------------	---------------

\* In the configuration tested, the EUT complied with the standards specified above.

Authorized Signature:

Robinson Lo  
Laboratory Manager

The manufacturer should ensure that all products in series production are in conformity with the product sample detailed in this report. If the product in this report is used in any configuration other than that detailed in the report, the manufacturer must ensure the new system complies with all relevant standards. Any mention of SGS International Electrical Approvals or testing done by SGS International Electrical Approvals in connection with, distribution or use of the product described in this report must be approved by SGS International Electrical Approvals in writing.

The report must not be used by the client to claim product certification, approval, or endorsement by NVLAP, NIST, or any agency of the federal government. All test results in this report can be traceable to National or International Standards.

## 2 Test Summary

Test	Test Requirement	Standard Paragraph	Result
<b>Radiated Emission (30MHz to 2GHz)</b>	FCC PART 15 : 2008	Section 15.239/15.33	PASS
<b>Occupied Bandwidth</b>	FCC PART 15 : 2008	Section 15.239(a)	PASS

Tx: In this whole report Tx (or tx) means Transmitter.

Rx: In this whole report Rx (or rx) means Receiver.

Remark:

Item No.: ISFM31, FM3

Only the Item ISFM31 was tested, since the electrical circuit design, layout, components used and internal wiring were identical for the above items.

### 4.2 Description of Support Units

The EUT was tested as an independent unit

### 4.3 Standards Applicable for Testing

The customer requested FCC tests for a FM transmitter

The standard used was FCC PART 15, SUBPART C: 2008 section 15.239.

### 4.4 Test Location

All tests were performed at:

"This document is issued by the Company subject to its General Conditions of Service printed overleaf, available on request or accessible at [www.sgs.com/terms\\_and\\_conditions.htm](http://www.sgs.com/terms_and_conditions.htm) and, for electronic format documents, subject to Terms and Conditions for Electronic Documents at [www.sgs.com/terms\\_e-document.htm](http://www.sgs.com/terms_e-document.htm). Attention is drawn to the limitation of liability, indemnification and jurisdiction issues defined therein. Any holder of this document is advised that information contained hereon reflects the Company's findings at the time of its intervention only and within the limits of Client's instructions, if any. The Company's sole responsibility is to its Client and this document does not exonerate parties to a transaction from exercising all their rights and obligations under the transaction documents. This document cannot be reproduced except in full, without prior written approval of the Company. Any unauthorized alteration, forgery or falsification of the content or appearance of this document is unlawful and offenders may be prosecuted to the fullest extent of the law. Unless otherwise stated the results shown in this test report refer only to the sample(s) tested and such sample(s) are retained for 90 days only."

#### **4.5 Other Information Requested by the Customer**

None.

#### **4.6 TEST Facility**

The test facility is recognized, certified, or accredited by the following organizations

- **CNAS (No. CNAS L2929)**  
CNAS has accredited SGS-CSTC Standards Technical Services Co., Ltd. Shenzhen Branch EMC Lab to ISO/IEC 17025:2005 General Requirements for the Competence of Testing and Calibration Laboratories (CNAS-CL01 Accreditation Criteria for the Competence of Testing and Calibration Laboratories) for the competence in the field of testing.
- **VCCI**  
The 3m Semi-anechoic chamber and Shielded Room (7.5m x 4.0m x 3.0m) of SGS-CSTC Standards Technical Services Co., Ltd. have been registered in accordance with the Regulations for Voluntary Control Measures with Registration No.: R-2197 and C-2383 respectively.  
Date of Registration: September 29, 2008. Valid until September 28, 2011.
- **FCC – Registration No.: 556682**  
SGS-CSTC Standards Technical Services Co., Ltd., Shenzhen EMC Laboratory has been registered and fully described in a report filed with the (FCC) Federal Communications Commission. The acceptance letter from the FCC is maintained in our files. Registration 556682, June 27, 2008.
- **Industry Canada (IC)**  
The 3m Semi-anechoic chamber of SGS-CSTC Standards Technical Services Co., Ltd. has been registered by Certification and Engineering Bureau of Industry Canada for radio equipment testing with Registration No.: 4620C-1.

## 5 Test Results

## 5.2 E.U.T. Operation

Operating Environment:

Temperature: 24.0 °C

Humidity: 52 % RH

Atmospheric Pressure: 1010 mbar

Remark: FM Transmitter modulation with signal of symphony.  
Used maximum input audio level 399mVrms.

## 5.3 Test Procedure & Measurement Data

### 5.3.1 Radiated Emissions

**Test Requirement:** FCC Part15 C Section 15.239, 15.33

**Test Method:** ANSI C63.4: 2003

**Measurement Distance:** 3m (Semi-Anechoic Chamber )

**Test mode:**

Transmit with un-modulation Keep the EUT in transmitting mode with un-modulation.

Transmit with modulation FM Transmitter modulation with signal of symphony.  
Used maximum input audio level 399mVrms.

**Test procedure:** Pre-scan the Transmit with un-modulation, Transmit with modulation mode, and found the worse case which it is transmit with modulation.

**Test Frequency:** The lowest channel: 88.1MHz  
The middle channel: 98.1MHz  
The highest channel: 107.9MHz

**Frequency range:** 30 MHz – 2GHz

**Receiver setup:**

Frequency(MHz)	Detector	Limit (dBμV/m) at 3m	RBW/VBW (kHz)
88.1 Fundamental Frequency	Peak	68	100/300
	Average	48	
98.1 Fundamental Frequency	Peak	68	
	Average	48	
107.9 Fundamental Frequency	Peak	68	
	Average	48	
30-88	Quasi-peak	40	1000/1000
88-216		43.5	
216-960		46	
960-1000		54	
Above 1000	Peak	74	
Above 1000	Average	54	

## Requirements:

According to FCC 15.239 requirements:

(b) The field strength of any emissions within the permitted 200 kHz band shall not exceed 250 microvolts/meter at 3 meters. The emission limit in this paragraph is based on measurement instrumentation employing an average detector. The provisions in Section 15.35 for limiting peak emissions apply.

(c) The field strength of any emissions radiated on any frequency outside of the specified 200 kHz band shall not exceed the general radiated emission limits in Section 15.209.

The limit for average field strength dBuV/m for the fundamental frequency = 48.0 dB $\mu$ V/m.

And the limit for peak field strength dBuV/m for the fundamental frequency = 68.0 dB $\mu$ V/m

## Test Procedure:

The procedure used was ANSI Standard C63.4-2003. The receiver was scanned from 30MHz to 2GHz. When an emission was found, the table was rotated to produce the maximum signal strength. An initial pre-scan was performed for in peak detection mode using the receiver. The EUT was measured for both the Horizontal and Vertical polarities and performed a pre-test three orthogonal planes. For intentional radiators, measurements of the variation of the input power or the radiated signal level of the fundamental frequency component of the emission, as appropriate, shall be performed with the supply voltage varied between 85% and 115% of the nominal rated supply voltage. The worst case emissions were reported.

- (1) The FM transmitter (plug) pulled straight up on its cable from the cigarette lighter adapter to 120cm length.
- (2) The FM transmitter (plug) pulled straight up 6cm to the terminal bump. Pre-scan tests were performed in X, Y, Z axis positioning, and final cable method was performed by placing the 6cm cable looped in a "U" horizontal on top of the table. The 120cm cable was manipulated in a variety of ways on the test table top (thrown, pulled straight, etc) for proper judgment of the worst case. The worst case was found on X axis (the FM transmitter fixed on the non-conductive bracket, and the antenna terminal is touched on table which is 0.8m above ground plane) by keeping the cable in "U" loop as shown in the final test set up photo.

The field strength is calculated by adding the Antenna Factor, Cable Factor & Preamplifier. The basic equation with a sample calculation is as follows:

Final Test Level = Receiver Reading + Antenna Factor + Cable Factor – Preamplifier Factor

An initial pre-scan was performed in the 3m chamber using the spectrum analyzer in peak detection mode. Quasi-peak measurements were conducted based on the peak sweep graph.

Pre-Scan data:

Axis	X Data(peak)	Y Data(peak)	Z Data(peak)
98.1MHz	43.54dBuv/m	33.52dBuv/m	30.75dBuv/m

### Configuration of Measurement:

#### Below 1GHz

#### Above 1GHz

The following test results were performed on the EUT

## 1. Fundamental emission

### Peak Detector

Test Frequency (MHz)	Peak (dB $\mu$ V/m)		Limits (dB $\mu$ V/m)	Margin (dB)	
	Vertical	Horizontal		Vertical	Horizontal
88.1	43.22	35.27	68.00	24.78	32.73
98.1	43.54	37.06	68.00	24.46	30.94
107.9	45.80	40.55	68.00	22.20	27.45

### Average Detector

Test Frequency (MHz)	Average (dB $\mu$ V/m)		Limits (dB $\mu$ V/m)	Margin (dB)	
	Vertical	Horizontal		Vertical	Horizontal
88.1	40.52	25.82	48.00	7.48	22.18
98.1	40.45	36.22	48.00	7.55	11.78
107.9	41.67	32.64	48.00	6.33	15.36

## 2. Harmonics & Spurious Emissions

Lowest channel: 88.1MHz

### Vertical

Frequency (MHz)	Cable Loss (dB)	Antenna Factor (dB/m)	Preamp Factor (dB)	Read Level (dBuV)	Quasi- peak Level (dBuV/m)	Limit Line (dBuV/m)	Over Limit (dB)
268.620	1.76	12.68	26.84	31.26	18.86	46.00	-27.14
322.940	1.98	14.76	26.90	34.00	23.84	46.00	-22.16
485.900	2.55	17.80	27.67	33.15	25.83	46.00	-20.17

### 5.3.2 Occupied Bandwidth

<b>Test Requirement:</b>	FCC Part15 C
<b>Test Method:</b>	ANSI C63.4: 2003
<b>Requirements:</b>	15.239 (a) Emissions from the intentional radiator shall be confined within a band 200 kHz wide centred on the operating frequency. The 200 kHz band shall lie wholly on the frequency.
<b>Receiver setup:</b>	RBW=10KHz, VBW=30KHz, Span=500KHz, Sweep time=auto.
<b>Test Frequency:</b>	The lowest channel=88.1MHz The middle channel=98.1MHz The highest channel=107.9MHz
<b>Transmit with modulation</b>	FM Transmitter modulation with signal of symphony. Used maximum input audio level 399mVrms.
<b>Limit:</b>	200KHz
<b>Method of measurement:</b>	1>. A small sample of the transmitter output was fed into the Spectrum Analyzer and the attached plot was taken. 2>. FM Transmitter modulation with signal of symphony. Used maximum input audio level 399mVrms.

**Test data:**

Channel Frequency (MHz)	20dB bandwidth (KHz)	26dB bandwidth (KHz)
88.1	163	188
98.1	166	183
107.9	154	179

The graph as below: represents the emissions take for this device.

## 20dB Bandwidth

Lowest channel: 88.1MHz

Date: 14.AUG.2009 08:42:32

Middle channel: 98.1MHz

Date: 14.AUG.2009 08:36:23

Highest channel: 107.9MHz

Date: 14.AUG.2009 08:35:19

26dB Bandwidth

Lowest channel: 88.1MHz

Date: 7.SEP.2009 07:28:40

Middle channel: 98.1MHz

Date: 7.SEP.2009 07:31:03

Highest channel: 107.9MHz

Date: 7.SEP.2009 07:33:34
