Subject: Revised documents for Application for certification of a digital camcorder remote control,  
FCC ID:XBK-103R

Dear Gentlemen,

Owing to the changes performed by applicant in the remote control for the marketing purposes the device re-testing was performed and a new test report was issued.

The functionality of the product has no change.

The following changes were performed in the device:

- 1) the battery was changed from a disposable one to a rechargeable Li Ion battery;
- 2) the charging is done by a standard micro USB connector, the device enclosure was changed; the improved enclosure contains a covered slot (by a silicon shutter) for the micro USB connector
- 3) The connection to a PC is only for charging and there is no data transfer.

We submit the corresponding documentation:

- 1) Test report PRORAD\_FCC.20255\_RC
- 2) Schematic\_diagram\_19509\_RC\_rev1
- 3) External\_photos\_19509\_RC\_rev1
- 4) Internal\_photos\_19509\_RC\_rev1
- 5) Label\_19509\_RC\_rev1
- 6) Product\_description\_19509\_RC\_rev1
- 7) Supplier\_declaration\_19509.

We hope the application satisfies your requirements.

Sincerely yours,

Michael Nikishin, EMC and Radio group manager
