

Circuit Block Diagram and Circuit Description

1、 Circuit Block Diagram :

2、 Circuit Description

Fuse: When the input current larger than the Fuse Rate, it should be breaking fastest to protect the circuit.

L1、 C1: Work together with to perform EMI function.

D1、 D2、 D3、 D4: Perform rectification function.

Q1、 Q2: High frequency with ON/OFF function to driver the Lamp.

L2、 C5、 C6: Make the resonance and restricting the lamp current.
