

Circuit Description

The PT-04 II RX

The PT-04 Transmitter emits a wireless radio signal to the Tetra PT-04 Receiver when the shutter is triggered which, in turn, fires the flash using selective channel. This allows you to take pictures with off-camera flash and not have to depend on your built-in flash as the trigger device.

Features

- 1) Radio frequency
- 2) Wireless control
- 3) Low frequency triggering
- 4) Not harm to cameras
- 5) Isolated channel selection
- 6) Independent channel works separately without interference.
