

# Circuit Description

(Receiver WXD-189RX)

The receiver's version is WXD-189RX, it is a wireless remote. Using the advanced automatic smart code setting, it goes on code setting without using code switch, so it is convenient and easy to operate. The standby power is low because of being controlled by macro chip, the circuit is made of several parts;

1. CPU working parts, the producing of radio signal and the controlling of the smart code.
2. The RF frequency signal receiving circuit, can receive the radio signal from space transmission.
3. LED indicator light and output signal control circuit.
