

# Circuit Description

(Transmitter WXD-189TX)

The transmitter's version is WXD-189TX, it is a wireless remote. Using the advanced automatic smart code setting, it goes on code setting without using code switch, so it is convenient and easy to operate. The standby power is low because of being controlled by macro chip, the circuit is made of several parts;

1. CPU working parts, the producing of radio signal and the controlling of the smart code.
2. RF signals will be transmitted through the antenna after passing the RF power amplifier and filters.
