Ref. FCC ID XDW5000-0001 Tune-up procedure:

Statement:

There is no tune-up procedure because there is no adjustable circuitry within XDW5000-0001: all oscillators within the product are of a quartz crystal fixed-frequency design and all reactive components are of a fixed value.

The RFID IC is programmed with a set of fixed digital parameters for the implementation of XDW5000-0001 at boot time. These parameters cannot be accessed or modified by the user.
