

## **DRV-WL-BLK3 WORK DESCRIPTRIONS**

DRV-WL-BLK3 ARE wirless Game Juitar Controller. It include three Color: (read, blue, and Black). It's working at FSR 2.400MHz to 2482MHz, base frequency is 12MHz.for MCU controll and RF module.

The guitar controller has two part, guitar controller and adapter, when you Using It, plug the adapter to PS2 or PS3 console first. The adapter Green LED blink, Prompt you to connect the Juitar controller., Here, you must put the 4pcs AA battery to the cell-box, close the cell-cover, and turn on the Power swich, at the same time, the adapter GreenLED stop blink. The Guitar connected.

When you press any button from Guitar controller. The all button singnal thought the MCU Process for the SPI commucation format. Send to RF moudul(MRC801B), then, the MRC801B modulate the key by 2.4GHz GFSR carrier-wave sinnal. And transmite by Module “F” type antenna

The adapter receiver the GSF singnal by RF module and demodulation the key for SPI communication with MCU. MCU received the Button signal the judge the Plug, and recoder the PS2 protocol if Plug to PS2 console; ro recode the PS3 protocol if Plug to the PS3 console.

The guitar controller have low battery denote, if the bettery is lower 4.2V. the controller LED is blink.
