824-849	27.10	7.37	34.47

Measurements based from EMC Test Report: FC09-112A.

### *Device and Antenna Operating Configuration:*

Device operating at maximum output power with continuous transmission of modulated data.

### *Test Procedure:*

This equipment is evaluated in accordance with the guidelines set forth in OET Guide 65 & ANSI C95.1 for the US and Health Canada Safety Code 6 & RSS 102 for Canada.

### *Other Considerations:*

The maximum EIRP is chosen such that the MPE calculations will demonstrate compliance at a 20cm separation distance. The maximum allowable gain is then derived for the corresponding RF exposure limit.

### MPE Calculations:

#### *Limit used:*

Occupational / Controlled Exposure  
 X General Population / Uncontrolled Exposure

$$\text{MPE Limit} = \frac{f}{1500} \text{ (mW/cm}^2\text{)}$$

836.5	0.5577
881.5	0.5877

$$\text{PowerDensity(mW / cm}^2\text{)} = \frac{\text{EIRP}}{4\pi d^2}$$

Given: **EIRP** in mW and **d** in cm

EIRP (mW)	Distance (cm)	Power Density (mW/cm <sup>2</sup> )	Limit (mW/cm <sup>2</sup> )	Power Density (W/m <sup>2</sup> )	Limit (W/m <sup>2</sup> )
34.47	20	0.5576	0.5577	5.576	5.577
34.70	20	0.5876	0.5877	5.876	5.877

**Statement of Compliance:**

This device demonstrates compliance under the operating conditions specified in this document. Under normal operating conditions, the antenna is designed to be installed in accordance with the manufacturer's instructions in such a manor to maintain the minimum separation distance. The MPE calculations shown above demonstrate compliance to the provisions of US and Canadian requirements.

As can be seen from the MPE results, this device passes the specified limits at a distance of 20cm at the maximum output power under normal operating conditions.
