

## **Door Sensor Operation Description**

This product ( model AC51532B ) include 2 parts, one is Magnet part, and the other part is Transmitter part ( 433.92MHz,FSK ). It works on 1pcs DC12V Alka battery supply. The transmitter part includes reed switch and transmitter.

This model is stalled on door or window frame, after battery power on, when the door or window is opened or moved a distance bigger than 3 centimeter, the 2 parts ( Magnet and Transmitter ) will be separate, then the reed switch will trigger the transmitter to send within 3 seconds signal out to the control panel for alarming. So the only way to make this door/window sensor to send signal out for alarm is to make these 2 parts separate. After alarming, if the alarming is controlled, this product will be automatically got reset for monitoring again.
