

## ZB24FM-Z I/F-Board (Interface Board)

Following is explanation about ZB24FM-Z I/F-Board (Interface Board).

The interface board is connected with ZB24FM-Z2501 and it is used for testing of communication test and easy sensor operation etc easily.

Since the interface board is designed and made for the test, please do not use except testing. (Do not ship product for customer with the interface board.)

### Summary of Function

The board is connected with ZB24FM-Z2501 and it can be communicated with RS-232C cable (straight). Communication operation test can be performed by LED, SW and temperature sensor by using attached application software. It makes it easy that connecting test with exterior system or exterior sensor etc by 4-20mA I/F and photo MOS relay.
