Schematic Diagram for the Keypad

1 Basic Information

1.1 Brief Introduction

Thank you for selecting our GSM/GPRS digital mobile phone. You can fully understand the usage of this phone and enjoy the sound functions and simple operation way after reading this manual.

This color screen mobile phone is designed for GSM/GPRS network environment. Besides basic call functions, it also provides you with numerous functions, including dual-card mode, Chinese and English input method, handwriting input, name card holder phone book, personalized incoming call rings and images, 64 chord music ringtone, SMS and MMS, chatting, shooting, video camera function, MP3 and MP4 video player, TV mobile, FM station, FM timed recording, record, auto Power On/Off, acceleration sensor, Sliding lock, memo, world time, Ebook, stopwatch, Blue Tooth, call coming show, T-Flash, GPRS, STK, JAVA entertainment, repeater, slide, E-mail, etc. Additionally, it offers personalized human-phone interface and satisfy your different requirement with sound function design.

This color screen and functions described in this User Manual depend on the network and subscribed services. So, not all menus in the phone are available, and shortcut numbers of menus and functions may be different due to different phones.

Our company reserves the right to make changes to the manual without any further notification.

1.2 Safety Instruction

- Please contact Telecom Sector or distribution agency to disable your phone SIM card once your phone is lost or stolen, this way, it can avoid economic loss resulted from that other use your phone
- You are required to tell IMEI code of the phone (It's a label at the back of the phone. You can see it by disassembling battery) when you contact Telecom Sector or distribution agency. Please write down the code and keep it in safe for future requirement.
- In order to protect your phone against nuisance use, please take some precautions, for example:
 - Set PIN code of the phone and SIM card, and change the code quickly before others know it.
 - Do not put the phone in visible places when you get out of the car. You'd better carry it with yourself or put it in travel bag.
 - Set call barring.

1.3 Safety Alerts and precaution

In order to ensure to use the phone safely and correctly, please read the precautions below carefully before your use.

1.3.1 General precaution

- Your phone is only allowed to use battery and charger approved by our company. Or else it can cause battery leakage.
- Your phone is only allowed to use battery and charger approved by our company. Or else it can cause battery leakage, overheat, explosion and fire.
- Do not knock, vibrate or throw the phone heavily to avoid malfunction and fire, overheat, explosion and fire.
- Once there're abnormal phenomena, like temperature increasing, color change, distortion during the usage, charging or save of the battery, please stop using and replace with new battery.
- It may burn the skin once the liquid from battery skin or clothes, please flush with plenty of clean water immediately and go to hospital at once of necessary.
- Please take the battery away from the fire to avoid fire and explosion once the battery leaks or emits strange smell.
- Do not place the battery exposure to moisture, or else it may cause overheat, fume and corrosion.
- Do not use or place the battery direct under sunlight, or in high temperature places, like near the car, or else, it may cause leakage and overheat, reduce the performance and shorten the lifetime.
- Do not charge the battery for over 24 hours continuously.

1.3.2 Precaution for the use of charger

- Please use 220AC. It may cause leakage, fire and damage to the phone and charger once other voltage is adopted.
- Do not cause short circuit to the charger, or else it may cause electric shock, fume and damage to the charger.
- Do not use the charger if the power wire is broken, or it may cause fire and electric shock.
- Please remove accumulated dust on the power plug.
- Do not put water container next to the power to avoid overheat, fire, electric shock and malfunction in case the contacts with water or other liquid.
- Do not disassemble or tamper the charger, or else it may cause personal injury, electric shock, fire and the damage of the charger.
- Do not use the charger in places with high humidity, like bathroom, or else it may cause electric shock, fire and damage of charger.

- Do not touch charger, power cord and power plug with wet hand, or it can cause electric shock.
 - Do not put heavy objects on power cord or change the power cord, or it may cause electric shock and fire.
 - Please unplug the power socket before cleaning and maintenance.
 - Please hold the charger to unplug the socket, it may damage power wire and cause electric shock and fire once pulling the power cord.
- 1.3.3 Cleaning and maintenance**
- As phone, battery and charger don't have waterproof function, so do not use them in places with high humidity, as well as avoid them being wetted by rain.
 - Please clean the , battery and charger with soft dry cloth.
 - Never use alcohol, thinner or solutions, like benzene, to wipe the phone.
 - Dirty socket can cause poor contact and power down, and even recharging isn't available. So, please clean it periodically.

1.3.4 Common Precaution

Mobile Phone:

- Please use the phone under the environment with temperature of 5℃-40℃ and humidity of 35%-38%.
- Please use the phone far away from regular telephones, TV sets, radio sets and office automation equipment, to avoid affecting the normal use of these equipment and mobile phone.

Battery:

- Place the battery in cool and ventilated place without direct sunlight.
- The battery has a limited lifetime. The use time of battery will be shortened progressively due to frequent charging. Once the battery is out of use after several charging, it means that the lifetime of the battery is over, and you shall replace it with approved model new battery.
- Do not dispose old battery as household waste. Throw it to specified old battery disposal place and follow stipulated instructions for disposal.

Charger:

- Do not charge under following conditions: places with direct sunlight, place with ambient temperature less than 5℃ or over 40℃, wet or dusty place with strong vibration(it may cause malfunction); near electrical appliance(it may affect the effect of image and sound) like TV set, radio, etc.

2 Before Use

2.1 Name and Description of Individual Part

2.1.1 Technical Parameter

Phone

Model: T106i
Size (Length × Wide × Thickness) 107 x 54 x 14 (mm)
Weight: 105g

Lithium battery

Model
Nominal voltage: 3.7V
Limited charge voltage: 4.2V
Rate capacity: 1000mAh
Duration of standby time: 400 Hours
Duration of talk time: 180 Minutes

Travel charger

Model
Input: 110-240VAC 50-60Hz

2.1.2 Icon

There may be some icons appearing under standby interface. Please refer to the following for detailed description:

Icon	Description
	Represents the strength network signal.
	Represents that you can use GPRS service.
	Enable vibration function.
	Receive new SMS.
	Receive new MMS.
	Alarm clock is set to On.
	It appears when headset is inserted.
	Enable call transfer function.
	Keypad is unlocked.
	Keypad locked
	Indicates battery level.

	Indicates missed calls.
	Enable chat function.
	Enable stopwatch function.
	Receive new service message.
	Turn on bluetooth handset.
	Bluetooth handset pairs successfully.

2.2 Keypad Description:

1.Power Key

Long press to switch on / switch off the phone.

If you switch on the phone and there's no SIM card., the phone will prompt you to insert SIM card. The phone will check if the SIM card is available after SIM card is inserted.

Search for network——The phone will search for network till finds proper network

2.Main key

Ring Down Key: Press the key to end the call or reject the call; In other cases, press the key can be back to the main screen quickly.

Ring Up Key: Answer key.

Searching key: Press it to searching for web page.

Quick Menu Key: Press it to enter the interface of staple function.

Menu key: Press it to enter the multi-function interface

Return Key: Press it to return the parent of working directory.

3.Side Key

Volume Key of Left Side Button: Choose to control the volume in the menu list .

Photo Key of Right Side Button: When long press the button to enter into the interface of camera viewfinder;Press the key again to achieve the camera function.

SIM Card 1: It's used to dial phone number through card A.

SIM card 2: It's used to dial phone number through card B.

The small icons displayed at the bottom row of the dial plate has following functions respectively from left to right:

The first one(pentacle):Call Center(call records, call set up)

The second one: Into the SMS interface

The third one: Telephone directory list

The forth one : Return to standby interface

The fifth one : Telephone directory list to find a quick menu.

2.3 Touch Screen Function Description

This phone supports touch screen function.

1.The four icons displayed at the bottom of the touch screen has following functions
respectively from left to right can enter **speed dials function ,phone book, opera, music function.**

2. Click on the logo on the touch screen can also be quick touch access to the corresponding menu.

3. When long time in standby touch interface menu icon, at this time all the menu icons will jitter, played a major role in pretection to avoid accidentally touching into the function as a result of menu items, at this time can drag-and-drop position,but not allowed to enter the function menu, you can clicking the middle button to stop jitter, from this way to enter function menu.

2.4 Battery

Battery under original status can be used afar charging by 50% power. The full performance of a new battery is achieved only after the first three complete charge and discharge cycles.

The disassembly and installation of battery

- Please follow steps below to disassemble the battery: ①Open the back cover of the phone; ②Remove the battery from left;
- Please follow steps below to install the battery: ①Push down the right end of the battery gently; ②Close the back cover of the phone.

2.5 Charge for Battery

- Connect the charger with power
- Insert the end of the charger into the top of the phone (Note: the arrowhead shall be upward).
- Then, power indication icon on the screen, which means that the battery is under charging. If the phone is overused under low battery, then charging indication icon will be displayed after the charging has been done for some time.

- If the power indication icon in the upper right corner is fully displayed without flashing, it means the is complete. If the phone is switched off during charging, there is image to indicate the the charging is over. This process needs 3-4 hours. It's normal that the battery, phone and charger with AC electrical plug once the battery is fully charged.
Note:
- Always keep the battery in ventilated place with the temperature from + 5℃ to +40℃ during charging, and make sure to use the charger provided by manufacturer. It may cause danger once unapproved charger is used and it may invalidate any approval or warranty.
- If the phone switches off automatically or there's "Low Battery" displayed on the phone, please charge to the battery as quick as possible. The phone will reduce charging time automatically if the battery power isn't used up before charging.
- The duration of standby time and duration of talk time offered by manufacturer are base on ideal working environment. In actual use. However, the working time of battery changes based on network condition, working environment and using way.
- Make sure the battery is installed properly before charging and it's forbidden to remove the battery during charging.
- Please disconnect the charger and phone with power and phone. The phone begins charging again when the power loss reaches certain extent after overcharging lasts for quite a long time (about 5-8 hours). We suggest you don't do this, as it will influence the performance and lifetime of the battery.

2.6 connecting to network

2.6.1 SIM card

Make sure that you've inserted available SIM card to the phone before your use. SIM card is the key to enter digital GSM net work.

All information related with establishing network connection and calling record initiate are saved in metal area in SIM card. Meanwhile , there're other information saved in the SIM card, including name and number saved in phone book and SMS. The SIM card can be removed from your phone and inserted to any GSM phone (the new phone will read SIM card automatically).

Never touch metal area the SIM card to avoid information loss or damaging the card. Keep SIM card if the phone is connected to external power, or else,

the SIM card will be damaged.

2.6.2 Insertion and Removal of SIM card

SIM card is placed in a card generally, so please take it out carefully before installing in the phone.

- Switch off the phone and remove the battery and other external power
- This phone uses dual-card mode, the place of card A and card B is decided by options in menu (please refer to "Settings" for "Dual-card Settings"). Please follow the photo to insert the SIM card to SIM card holder.

2.6.3 Unlock of SIM card

SIM card uses PIN1 (personal identity number) code for protection against unauthorized use. You are required to key in PIN1 code to unlock the SIM card every time the phone is switched on once your phone enables this function, then you can make calls or answer incoming calls. Users can also choose to remove SIM card protection (please refer to Section 3.14.7 Security Settings): in the case, the SIM card can't be protected against unauthorized use.

- Press End Key to switch on the phone.
- Key in PIN1 code, press Right Soft Key to clear incorrect input and press OK to enter. For example, if PIN1 code is set as 1234, then you shall key in : 1 2 3 4

If incorrect code is keyed in for three times insuccession, SIM card will be locked. The phone will require you to key in PUK1 code for unlocking. Please do not key in at random if you don't know PUK1 code, you shall send SIM card to network operator for assistance. Please refer to Section 3.14.7 Security Settings.

Note: Your network supplier will set a standard PIN1 code (4 to 8 digits) for your SIM card. You shall change the code to your personal password as soon as possible. Please refer to Section 3.14.7 Security Settings for details.

2.6.4 Unlock of the phone

You can set password protection for your phone against unaythorized use. You are required to key in PIN1 code (it you've set password protection) to unlock the phone every time the phone is switched on once your pone enables this function, then you can make calls or answer incoming calls. Users can also choose to remove password pretecton (please refer to Section 3.14.7 Security Settings); in this case, the phone can't be pretected against unauthorized use.

- Key in phone password, press Right Soft Key to clear incorrect input press OK ot enter. For example, if the phone password is set as 1122, then you shall key in:

Please contact your retailer or local authorized maintenance service center to unlock the phone password once you forget it.

2.6.5 Connecting to Network

- The phone will search for available network automatically(Searching for network is displayed on the screen) once the SIM card is unlocked successfully. Name of network supplier will appear on the screen once the phone searches for available network.

Note : IF EMERGENCY is displayed on the screen, it means that your phone is out of the normal network coverage, but you can also make emergency calls according to the signal strength.

2.6.6 Dial calls

You're allowed to make calls or answer incoming calls once name of network supplier appears on the screen. The signal bar in upper left corner represents the strength of network signal. Moving in a small range can improve your calling quality as the calling can be interfered by barriers greatly.

2.6.7 Dial domestic calls

Press number keys to input phone number and press Dial Key to make calls. Please press Right Soft Key to delete characters once the phone number needs to be changed. Dialing animation will be displayed on the screen when dialing. The call status information will be displayed after the recipient answers the phone. There's an alert tone when the gets through (it needs network support) if this function is enabled.

Please press End Key to end the call once it's over.

Zip code Phone number Dial key

2.6.8 Dial extension of fixed phones

Some extensions of fixed phones can't be got through, and you shall only dial the telephone exchange, and then dial the extension number. The phone can finish all dialing and dial the extension automatically when you insert pause character "P" between telephone exchange and extension number. The way of inputting "P" is to long press * key, then symbol "P" appears on screen.

Zipcode Telephone exchange P Extension Dial key

Example of the use of pause character:

For example, if there's a voice mailbox system, which is used through dialing way in 8880000 number, the number of mailbox is 6666 and the password is 8888, then you can follow the way below to dial:

8880000 P 6666 P 8888

The first part of this number is used to dial voice mailbox system.

It will send 6666 to select mailbox once the phone is answered.

The second pause character will delay for 5 seconds before password 8888 is sent out (the former "P" represents to get through, the latter "P" represents to delay for 5 seconds).

2.6.9 Dial international calls

Long press *key under standby status till prefix symbol "+" appears on the screen when dialing international calls. It allows you to dial a number in any country once you don't know the international prefix symbol (e.g.: it's 00 for China).

Key in the country code and complete phone number after prefix symbol appears. The country codes follow general practices, the country code of Germany is 49, Britain is 44, Swiss 46, etc.

"0" before the area code shall be removed before dialing, just as dialing international calls.

For example, you shall dial like this if you need to dial service hotline from other countries:

+86 21 114

+ Country code Complete phone number Dial key

2.6.10 Dial Call in the List

Every phone number you dialed and received are saved in a list in the phone, recent dialed and received phone numbers are placed on the top of the list (Please refer to Section 3.24.1 Section Call Register). Every phone number is classified based on Dialed Calls, Received Calls and Missed Calls. The phone also provides you with All Phone Items for you to view all calling record. Old phone numbers will be deleted automatically once the phone number list is full. Please follow steps below to view the list:

■ list of all the phone numbers can be carried out by clicking the Options menu of other operations.

Press Enter to view details after phone number list appears. You can press Save to store this number to the phone book after entering.

2.6.11 Emergency Calls

You can call emergency services if you are within the network coverage (you can check it by viewing the network signal strength bar in the upper left corner). If the network supplier doesn't provide roaming service, then "EMERGENCY" appears on the screen, which means you can only call these calls. You can dial emergency calls within the network coverage even if there's no SIM card.

2.6.12 Answer Calls

You shall press Dial Key to enter answer. You can also press the key on the headset to answer calls once the headset is inserted. Hence, you can set Auto Answer to On once it's inconvenient for you to press keys, and the

phone answers automatically after vibration and ring or vibration lasts for 5 seconds once the headset is inserted.

2.6.13 Call Register

The phone saves the record of your last call and duration since the phone is used(Please refer to Setion 3.24.1 Call Register).

2.6.14 Call Menu

- Pause--Keep current call or restore saved call.
- End --End current call
- New Call --Make a call to a new participant
- Phone book--Enter phone book to view
- SMS--Write message and send out the message.
- Dual Tone Multi Frequency--Press Left Soft Key to open or close dual tone multi frequency
- Handsfree--Enable loudspeaker to amplify call voice.

3 Function Menu

(※ Some part funtions below depends on the function support status of specific phones)

3.1 Use of Function Menu

Scroll to select functions

- Select to enter main function menu under standby status;
- Press keys or click touch screen to follow prompts to enter or exit from menu under main or submenu.

Exit from menu

Generally, you can exit from some meny items by the touch pen, press the OK key in the middle turn back to the standby interface.

3.2 Structure of Function Menu

The default structure of function meny is as follows after SIM card is inserted and the phone is power on:

- | | |

3.14 Setting

3.14.1 Profile Setting

Choice of dual-mode open, open SIM 1 card only, open SIM 2 card only, flight mode.

■ Flight Mode:

About Flight Mode: Flight mode is used to close the phone communication function, that it cannot receive, dial call and send message,

has no signal connection with the base station, and doesn't attempt to contact the base station.

The phone will turn off all the relative functions on the signal in the mode, but it can still continue to use the other functions when switching on the phone, for example, view the phone book, enjoy the article and films on the phone etc.

Note: Because now the civil aviation authority has not issued the regulations on "Flight Mode", the passenger shall still switch off the phone before going on board according to the related regulations on the airplane; in the normal states (such as night), it can switch to this mode, and save power – because the signal consumes most power of the phone, and it can save power greatly for switching off signal in the flight mode.

3.14.2 Touch Screen Calibration

It will be more accurate when using the touch pen by calibrating the touch screen.

FCC RF Exposure Information and Statement

The SAR limit of USA (FCC) is 1.6 W/kg averaged over one gram of tissue. Device types WG3 (FCC ID: XQF-T106I) has also been tested against this SAR limit. The highest SAR value reported under this standard during product certification for use at the ear is 0.792W/kg. This device was tested for typical body-worn operations with the back of the handset kept 1.5cm from the body. To maintain compliance with FCC RF exposure requirements, use accessories that maintain a 1.5cm separation distance between the user's body and the back of the handset. The use of belt clips, holsters and similar accessories should not contain metallic components in its assembly. The use of accessories that do not satisfy these requirements may not comply with FCC RF exposure requirements, and should be avoided.

This device complies with Part 15 of the FCC Rules.

Operation is subject to the following two conditions:

- (1) this device may not cause harmful interference, and
- (2) this device must accept any interference received, including interference that may cause undesired operation.

NOTE: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation.

This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

NOTE: The manufacturer is not responsible for any radio or TV interference caused by unauthorized modifications to this equipment. Such modifications could void the user's authority to operate the equipment.
