RF exposure exhibit

FCC RF Exposure Requirements

General information:

FCCID: XTZRCL-T700

Modulation:

Device category: Mobile per Part 2.1091

Environment: General Population/Uncontrolled Exposure

Otherwise, compliance with the power density limits of 1.1310 is required.

Antenna:

The device has a portable antenna to be used for the purpose of reading tags

Configuration	Antenna p/n	Type	Max. Gain (dBi)
Indoor	None	Whip	0

Operating configuration and exposure conditions:

The conducted output power is 1.73W

MPE Calculation:

The minimum separation distance is calculated as follows:

$$E(V/m) = \frac{\sqrt{30 \times P \times G}}{d}$$
 Power density: $P_d(mW/cm^2) = \frac{E^2}{3770}$

The limit for general population/uncontrolled exposure environment is **0.31** mW/cm2* for a Channel Frequency: 457.5750 MHz

(A)

()		1	
Separation	n Distance	Anter	nna Gain (dBi)
Geparation	Distance		-0.57
Power Conducted (W)	Duty Cycle (%)	(in)	(cm)
1.73	100		10.99
-	-	-	-

Conclusion:

The device complies with the MPE requirements by providing a safe separation distance of 20 cm between the antenna, including any radiating structure, and any persons when normally operated .
