DV-9812 CIRCUIT OPERATION PRINCIPLE DESCRIPTION

Main control Circuit (fig1) deal with DSP (Digital Signal Process) and power control.
 Fig1a

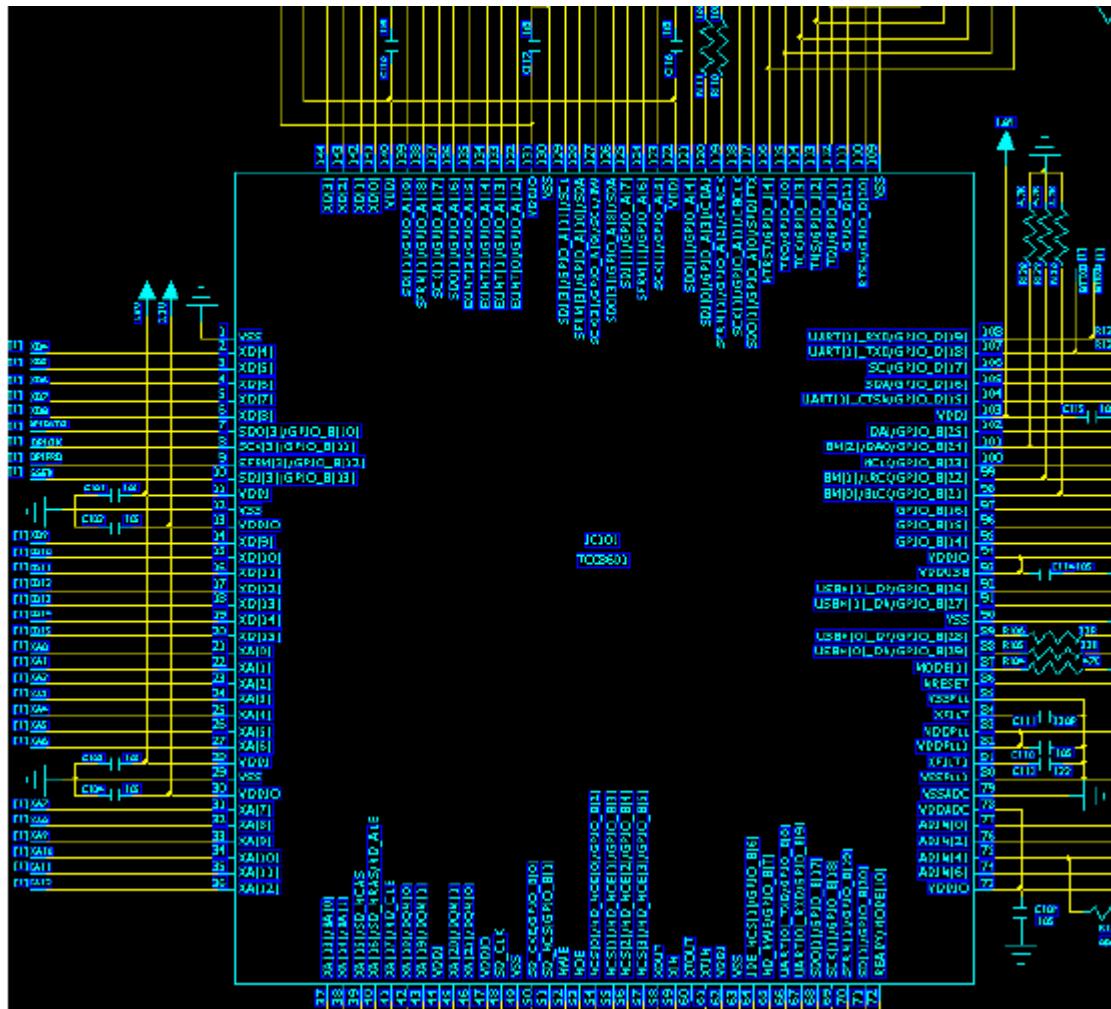

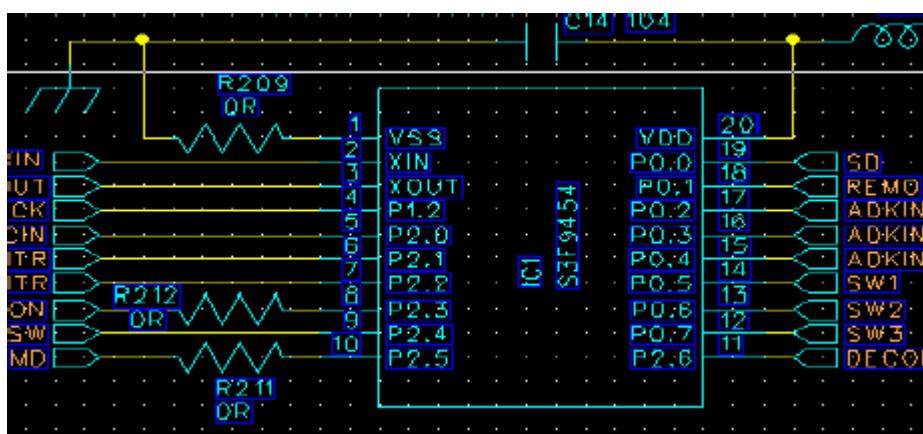

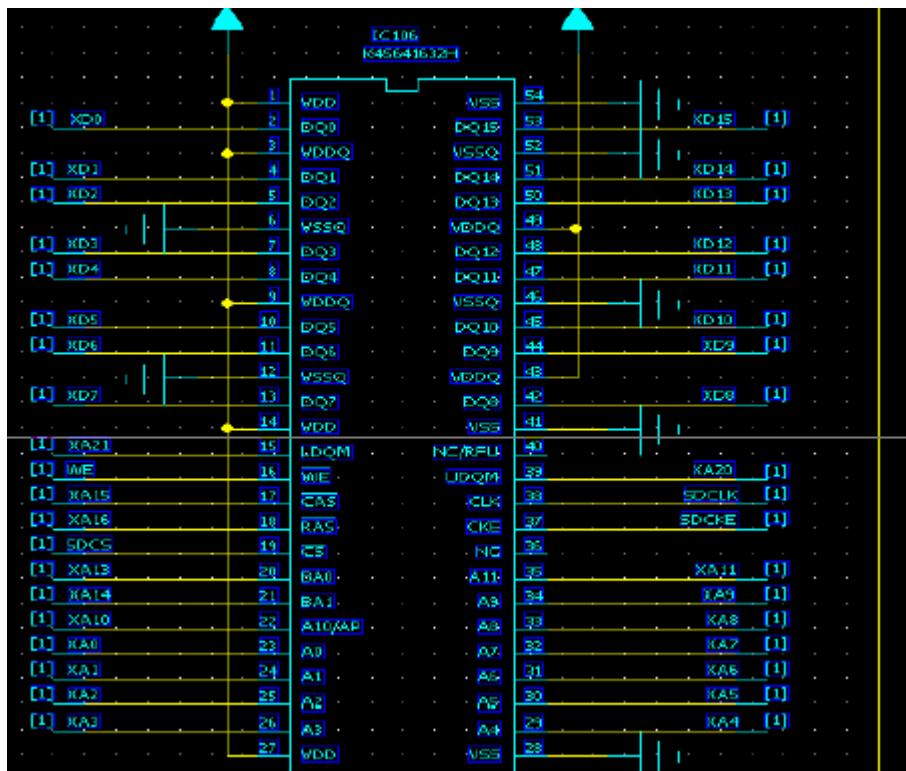

Fig1b

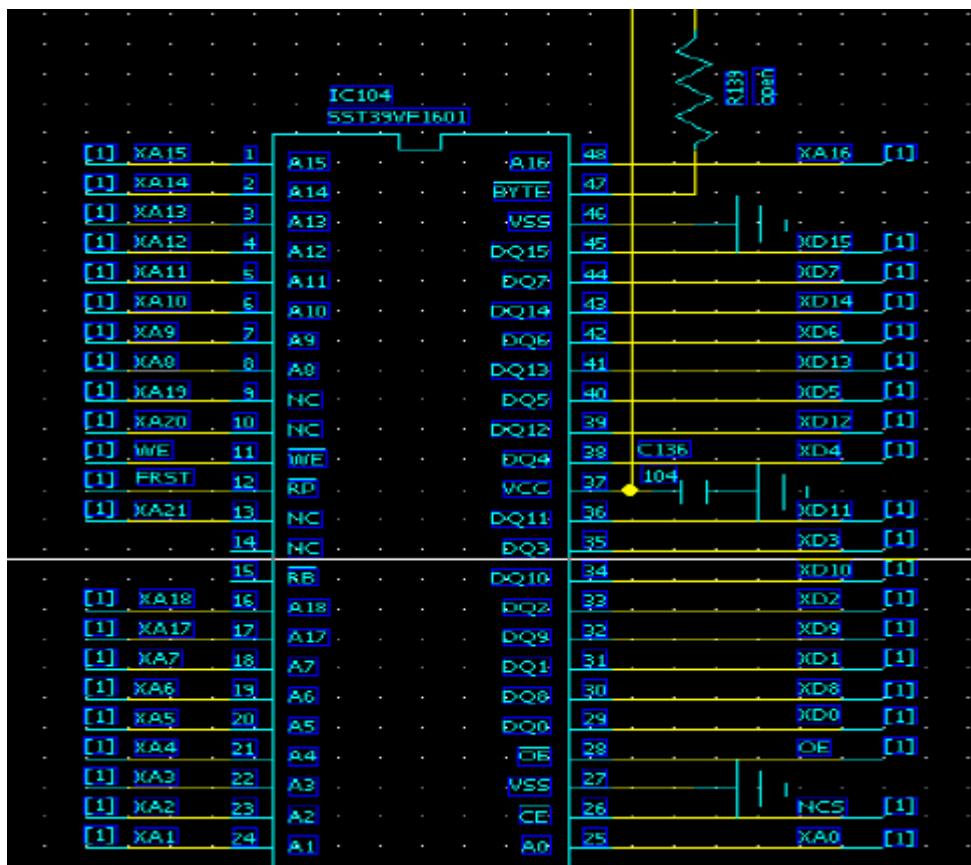

SDRAM circuit (fig2) used for store un-processed digital signal.

Fig2

NOR-FLASH circuit (fig3) used for store the system software and last memory data.

Fig3

Audio Process (fig4) used for audio amplifier. (fig5) used for sub-woofer amplifier.

Fig4a

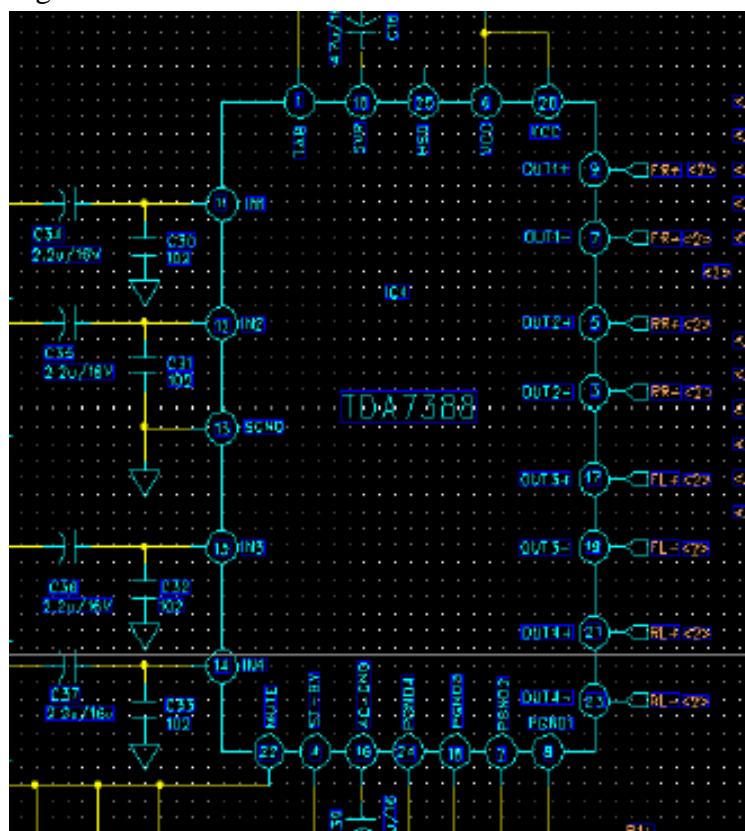

fig4b

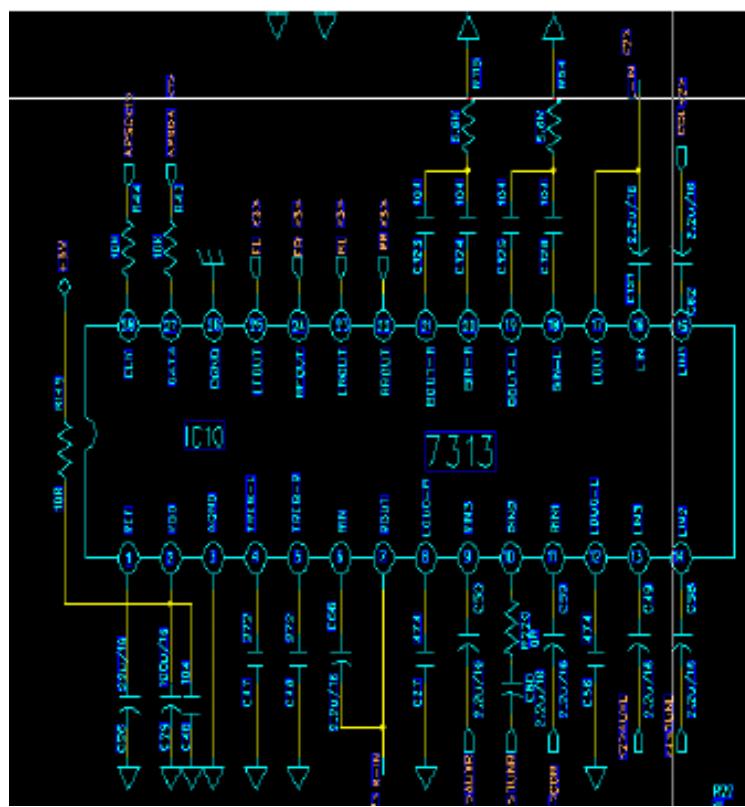

Fig4c

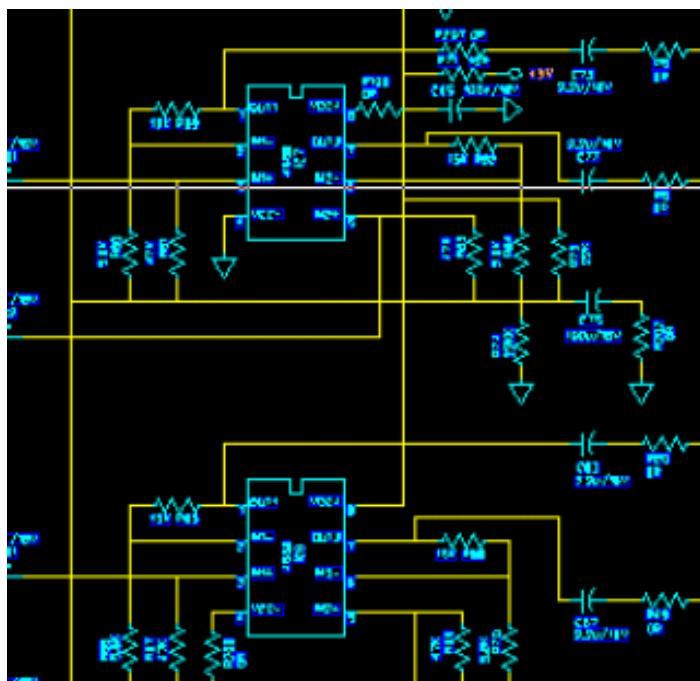

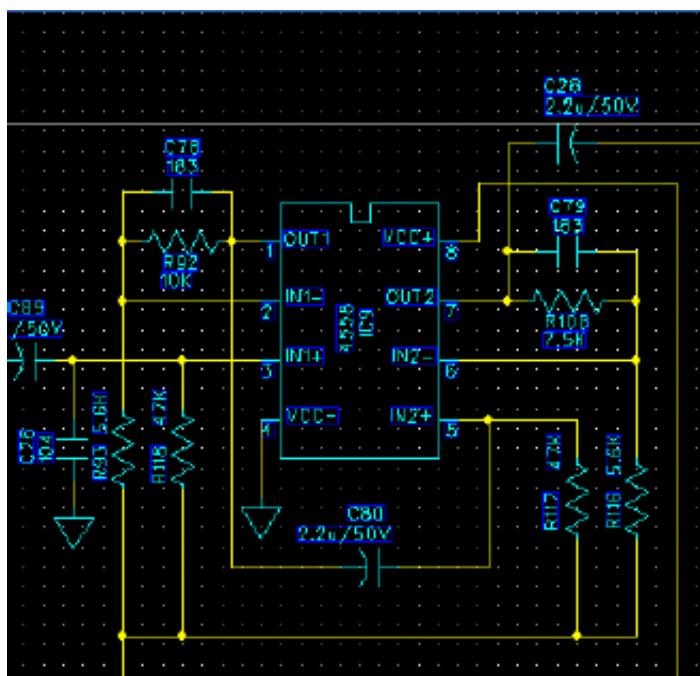

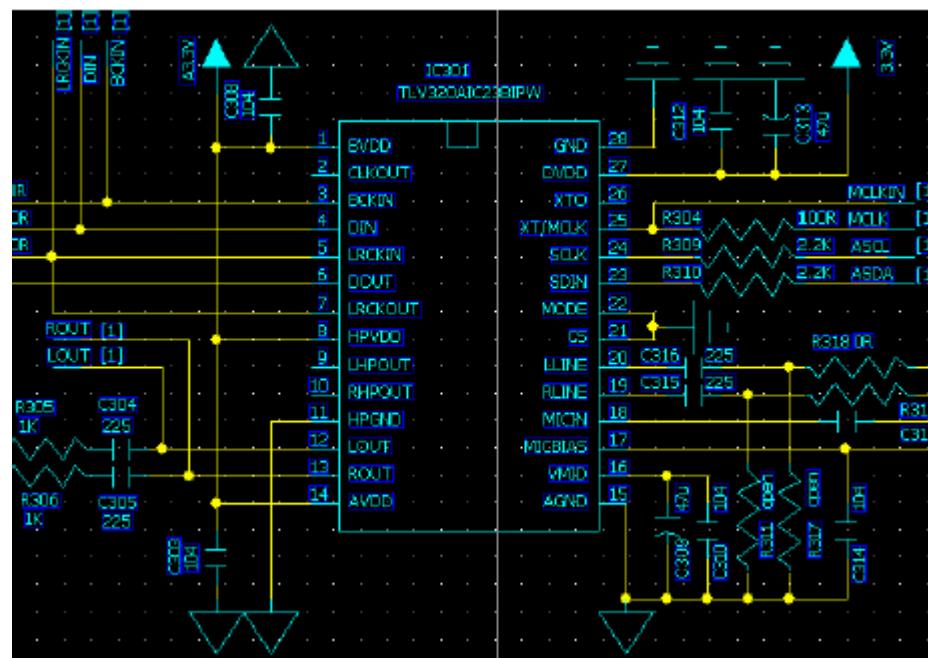

fig5

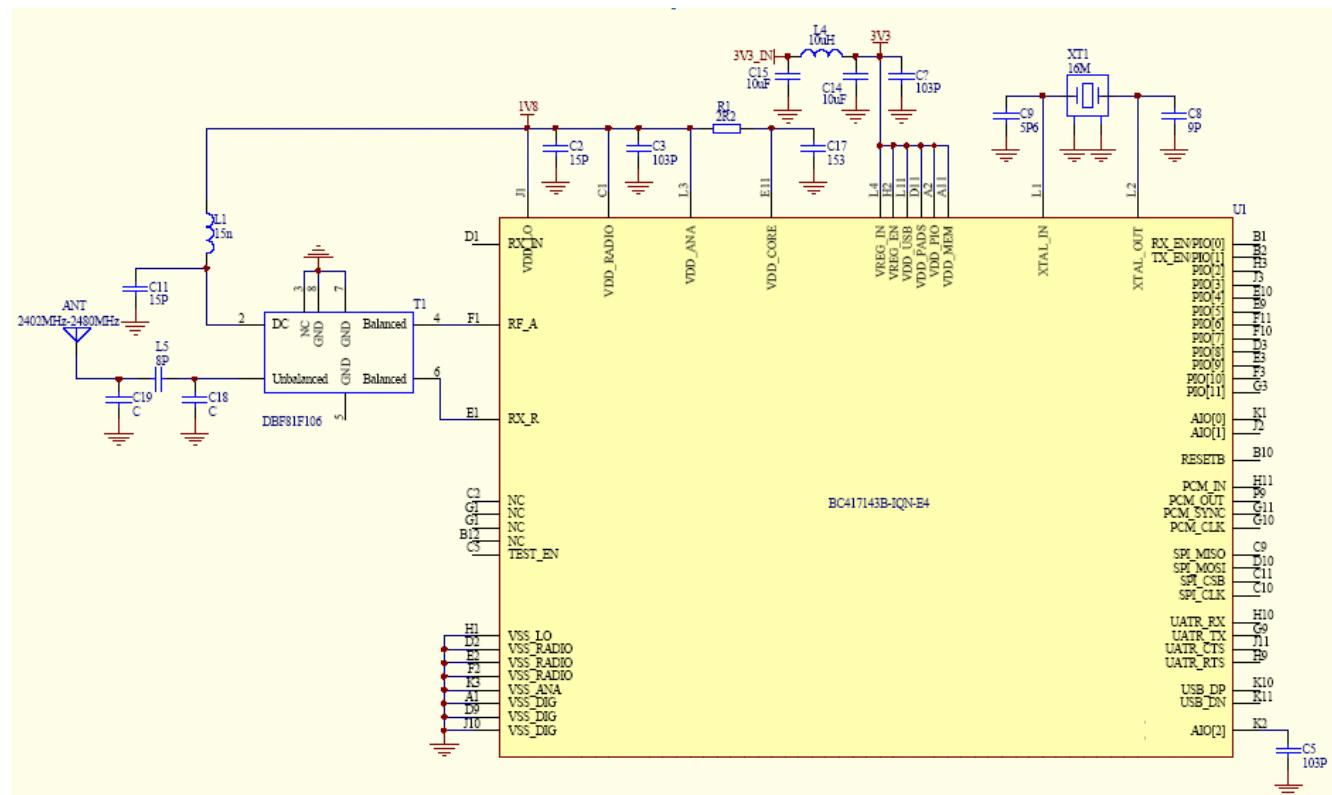

D/A converse (fig6) used for converter digital signal to analog signal.

Fig6

Bluetooth part (fig7)

Fig7

CD playing (fig8) used for RF amplifying and servo process. (fig9) used for playing disc digital signal process. (fig10) used for motor driving.

Fig8

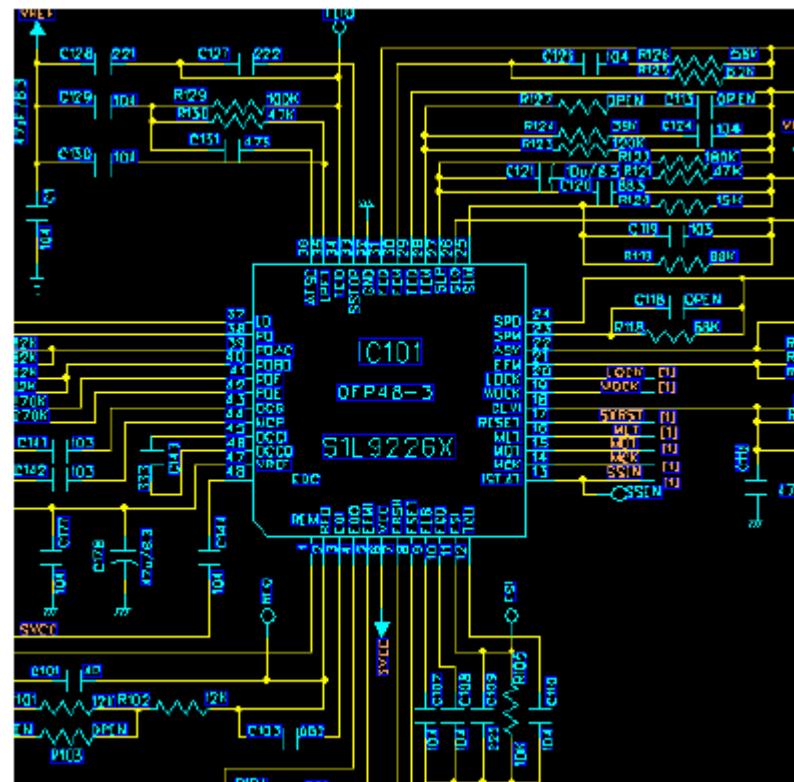

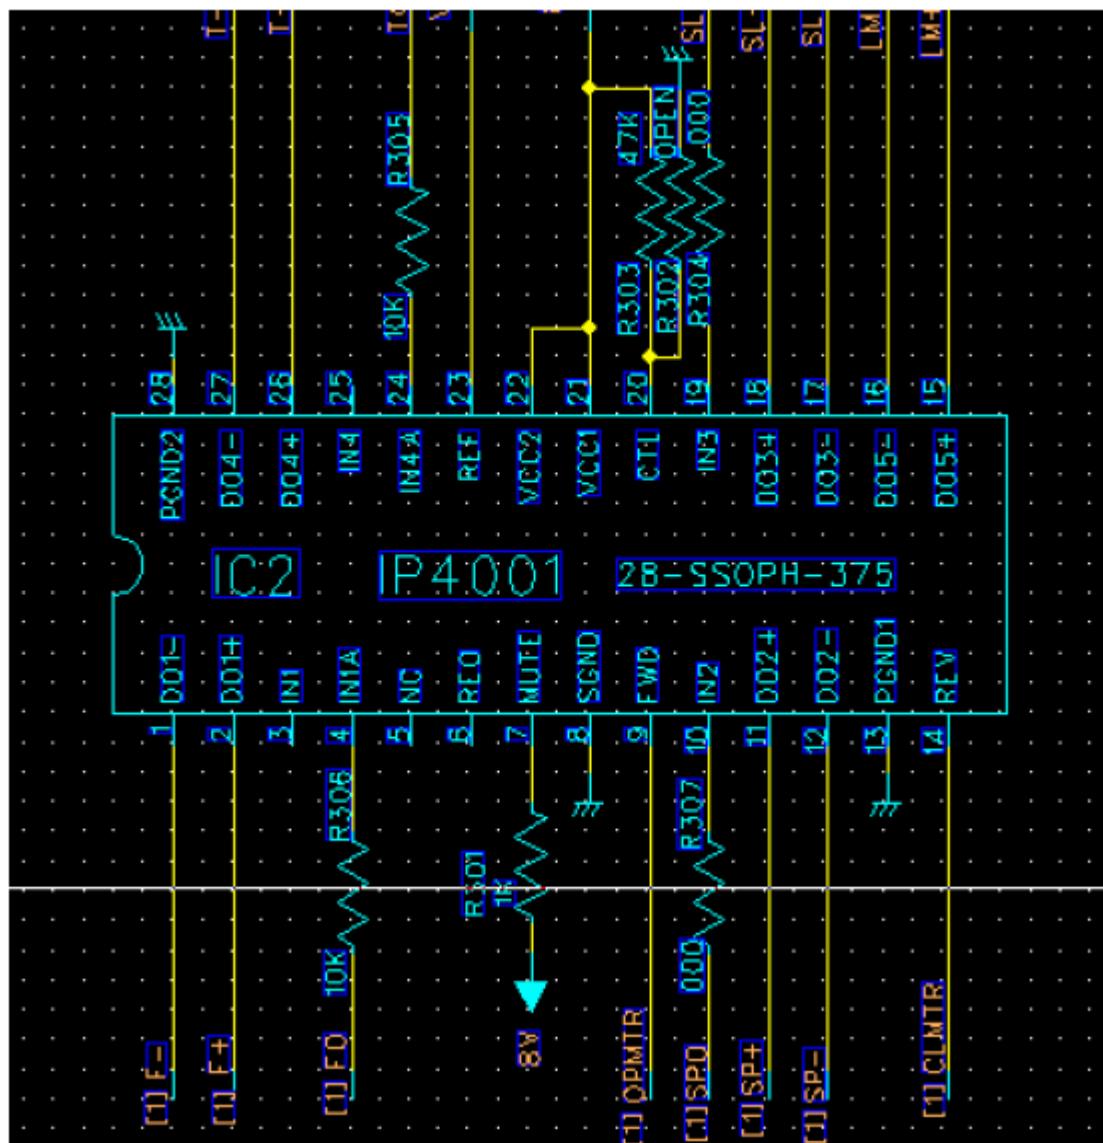

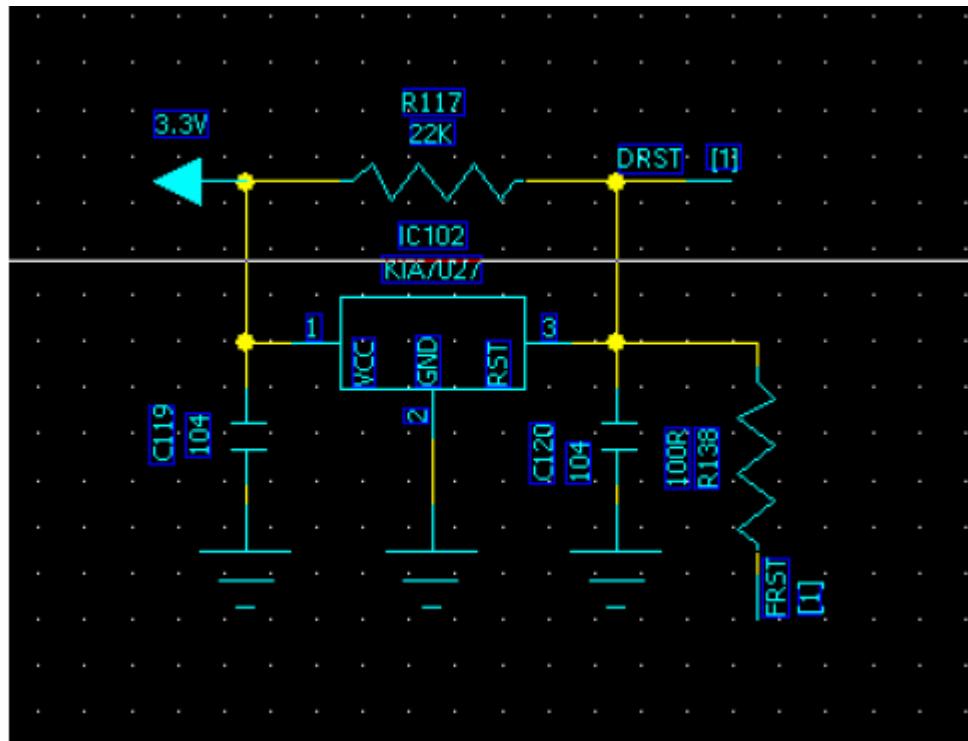

Fig10

Reset circuit (fig11) used for reset when power on.

Fig11

Power (fig12) used for supply power.

Fig12a

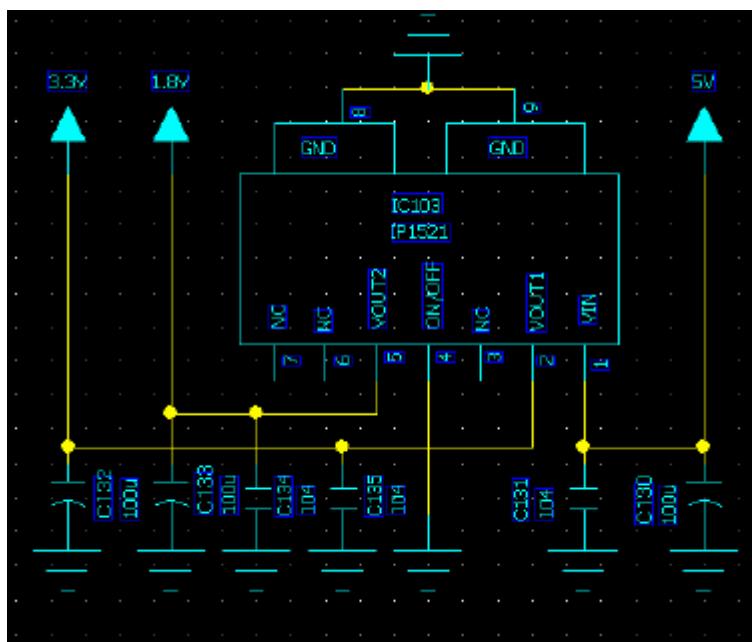

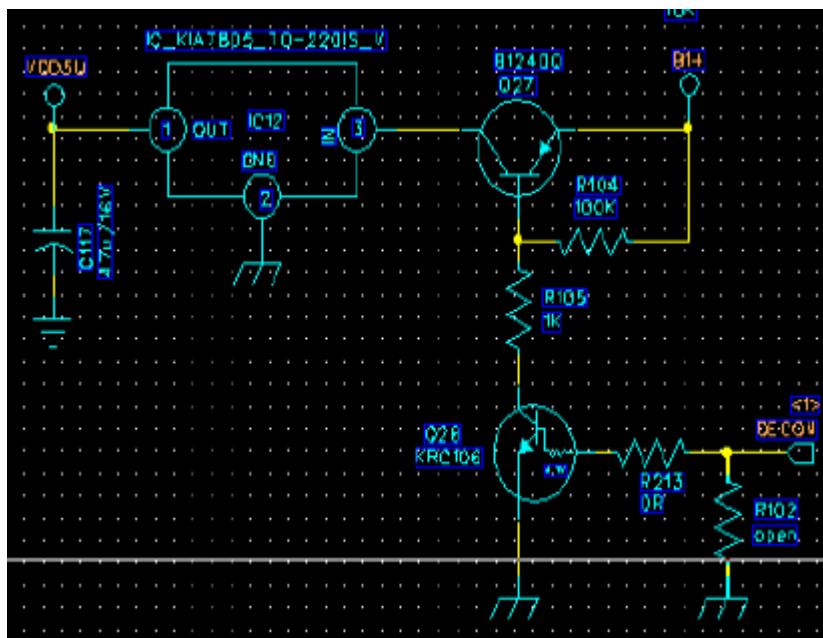

Fig12b

Display (fig13) used for media play and radio information display.

Fig13
