Federal Communications Commission  
7435 Oakland Mills Road  
Columbia, MD 21046

To Whom It May Concern:

The MaxR-950 USB High Power Radio Module will be only be incorporated within embedded units which are under control of Arada Systems Inc. I hereby confirm that the host is battery operated and not connected to Low voltage Public Network. The 5V VBUS supply is generated by an onboard regulator that is tied to a battery source. That holds true for all host device platforms. The radio modules will not be end-user accessible or not for sale to public. Radio Module and antenna installation is always under the control of Arada Systems and RF exposure Compliance ensured as per FCC Rules

Sincerely,

A handwritten signature in black ink, appearing to read "Praveen Singh".
