Fig 2 – EKT-3000 Transceiver Key Location System Overview

The EKT-3000 consists of 2 parts: a belt side to be worn and the key fob side to be placed on the key ring shown in Figure 2. Whip antenna structures are integrated directly into both units of the EKT-3000 circuit boards and are fully enclosed in the plastic housing. Power is provided by two 'AAA' size batteries. When the units are together, battery power is completely disconnected via a magnetic switch and magnets enclosed in the plastics. Closer views of the EKT-3000 system are shown in Figure 3 and 4 below.
