#### Description of Test Item

The RFID transceiver module is located on PCB 1102, and is controlled by the main microcontroller located on PCB 1101, both located inside the LCU 5350C1.

It will communicate with a RFID card if the RFID card is held right in front of the RFID antenna (1103), that is also located inside the LCU 5350C1.

#### Theory of Operation

The RFID transceiver module supports several RFID standards, ISO 14443-A, ISO 14443-B and ISO 15693, working on 13.56MHz

On a higher level it supports MIFARE communication and encryption. The transceiver's oscillator is controlled by a 27.12MHz crystal.

## 2 TEST REPORT SUMMARY

### 2.1 General

All measurements are traceable to national standards.

The tests were conducted for the purpose of demonstrating compliance with FCC CFR 47 Part 15, paragraph 15.225 and Industry Canada RSS-210 Issue 9.

Tests were performed in accordance with ANSI C63.4-2014 and ANSI C63.10-2013.

Radiated tests were made in a semi-anechoic chamber at measuring distances of 3m and 10m.

A description of the test facility is on file with the FCC and Industry Canada.
