Description of Test Item

The SCU300 is a System Control Unit (SCU) with integrated NFMI radio and Bluetooth (Basic, EDR and BLE) communications. The NFMI is audio based for using with the headset Comtac VII.

The headset can also be connected to the SCU300 using a proprietary cable. The Bluetooth is a dual radio chip with one antenna path that allows the user to connect the Comtac VII to a cellular phone or an external radio. The SCU can also be connected to external radio by wires. The SCU is powered by 2 x 1.5V by AAA/LR03 alkaline batteries or rechargeable NiMH batteries. The batteries can not be charged while in the SCU.

6 BLOCK DIAGRAM

6.1 Power Line Conducted Emission

6.2 Test Site Radiated Emission

This test setup is used for all radiated emissions tests. For frequencies below 30 MHz the measuring distance is 10m, for all other frequencies it is 3m or 1m. Emissions above 1 GHz are measured with a Spectrum Analyzer and Horn Antenna. For measurements above 18 GHz the test receiver is moved inside the anechoic chamber and located next to the antenna to minimize the cable loss. All measurements at 1GHz and above were performed with turntable height 1.5m and with the ground plane covered by absorbers. A pre-amplifier is used for all measurements above 30 MHz, and High-Pass or Band-Pass filter is used for all harmonics.
