

Operation Description

一. 2.4G RF IC SGN6210 block diagram

Internal oscillator frequency :12MHz

Block Diagram

二. 2.4GHz 2-Way RF Mouse Emitter: CX5183

Internal oscillator frequency :4MHz

三. Operation Description

1. Turn on the Power, Power is 2*AAA battery.
2. The Mouse side radio system will send sync packets after being powered on, and then search Dongle's responses. This is search mode. If any responses-packets be received, the Mouse side radio system will enter normal working mode. Then , if Mouse side radio system loses synchronization, it will enter sleep mode.
3. The antenna is Internal PCB type, the maximum gain is 1.84 dBi.
